restrict Amateur antennas? How come States are gradually codifying this rule?
(the FCC # is PRB-1). Oh, BTW CBers aren't covered by this rule. CB is so "important", right? I wonder why they didn't include CB? How come there is a bill in Congress right now to exempt hams from CC & Rs--those pesky housing
and condo rules that prevent external communications antennas? So far, its outcome looks pretty favorable. Of course, builders and condo associations are
fighting it, but, with all the favorable press ham radio has had in Congress and the
fact that it HAS been recognized as a valuable communications resource both be-
fore AND after 9/11, it will likely become law. Funny thing: I haven't heard a thing
about "protections" for CB radio like I have about ham radio. Wonder why that is?
Even REACT is a dying breed; never see them around here. Could it be that Amateur Radio has such a cadre of trained, disciplined operators, such a fine record of responding to emergencies and providing effective communications that
REACT has nothing to "react" to??? MMffffff! HAHAHAHAHAHA! Sorry for the outburst, I just couldn't hold it in! During the CB craze, many police and county
dispatch centers did, indeed, install, CB radios. I asked a local friend if they still had one in the radio room and he said, "Hell, NO! That stupid thing drove the operators crazy with all that noise and ridiculous lingo"! <<mmmmfffft!
ggg--now
control yourself, Jerry>>
Tell me, what is so exciting about a hick yelling the same thing over and over and over and over, squeaking and beeping and using goofy slang phrases. Now THAT's boring. How come it is that I see lots of CB ops list their equipment in their sig and all of it is B O U G H T stuff? Overpriced BOUGHT stuff?<

Now you stepped beyond the realm of just
Kenneth alone, as I am a cb op, at times.
Gear is worth what one will pay for it.

> One of
those "BIG COIL antennas--I can make for $10.00.<

Make it look as good and we'll go into business. With your antenna skill and my keys to the kingdom of all that is evil in the way of radio, we can get richer in no time.

> Want an antenna for ANY frequency from DC to daylight? Lotsa hams make that, too! Sure, some CBers do the very same thing. Not the vast majority. Can YOU explain what "impedance" is? Can you effectively argue that coax length doesn't matter, and PROVE what you say is true (of course that person would have to be shown live
and in person---not just my word). There are exceptions (phased antennas,
etc),
but it doesn't matter, and I can prove it in person. How many "resistances" must
a radio signal pass thru in your antenna system? Name them? There IS more to
radio than yap, yap, yap, yap, yap.....
I would bet (if I were a betting man--I don't even play the lottery) that if you asked
about all those Congressmen and "Presidents" that worry about truckers' lobbies,
asked them about the relative importance of the 2 radio "hobbies", you would be
shocked to find that Amateur Radio does, indeed, hold a higher level of esteem among the powers that be than CB radio. Truth is, CB radio is regarded as a kind
of "cultish, lowboy" toy that has numbers, but very little substance or importance in the relative pecking order. <

I find that is believed of by most hammies. The rest of the non-radio word couldn't tell the difference between cb and hammie radio. To confirm it, walk up to a stranger on the street and ask him to name which "meter" cb falls under and then ask them to name a single "meter" of hammie radio..

>It IS a toy. Ham Radio is a toy--part of the time, but it can rally professional, organized communications where CB just can't. CB has also garnered a black eye because of the interference and "rebel" attitude regarding the laws governing its use. If you REALLY knew somebody inside, you might find that the bigwigs would LIKE to find a way to get rid of CB radio -at least, in its present form. And it *may* happen, the way things are going. I could just about guarantee that CB is NOT going to "take over" anything as you like to troll. Radio usage is a (read it carefully now) P R I V I L E G E granted by the government, not a right. You have a right to free speech, not a "right" to use a radio. That privilege CAN be taken away..just like it can for hams. There are discussions right now about sunsetting CB radio and encouraging the use of FRS and MURS instead.
You inflate the importance of trucks and the CB radios they use. For what you
actually use them for, FRS would actually work better. At low power, more trucks
could be on the same channel at the same time without bothering each other. As to
trucks bringing the economy to its "knees", you forget that much of that material now hauled by truck can be put on trains.<

Not most perishables.

> UPS now ships its trailers on piggyback trains in the US, and Norfolk Southern Railway has something called Triple Crown
Service where there are NO railcars underneath the trailers! The trailers have rail
wheels as well as road wheels, and it is a simply a matter of hooking a locomotive to a long string of these and hauling them to their destination. And if you think ALL
railroads are broke and ineffective, you'd better check again before giving inac-urate information. There would be some disruptions, of course, in the event of a truckers' strike, but much of their haulage can be moved by train--enough to prevent the widespread harm done if truckers quit driving.<

I don;'t believe that. You underestimate the power of the trucker's unions. HBO did a special on this very recently.

> BTW, I worked in the
rail industry for 23 years before retirement and I know what I am talking about. <

Aw, damn Jerry, you retired with a nice little pension. You can't take it with ya' brother, whatcha doing with all that cash?
C'mon, let's get these cb antennas rolling.
A small investment and I can almost guarantee ya' we'll sell more than the hammie bugcatcher antennas.

>The rail industry would LOVE to see you strike over a "radio" issue. Or any issue,
for that matter--they'd welcome the extra business!!
Now I have my flameproof suit on. But, Kenny, you brought on this "debate".
73
Jerry<

So far both y'all made excellent points. It;s a great debate. I'm still listening not saying a word.......<g>!

Try using plain english without a phoney accent on CB and people will
sit up and take notice.

A simple way to check the mic is to borrow one from someone. Or buy one new and get it back to the store while you can get your money back and say wrong mic if the mic is good.
Sincerely Ken

I tend to believe he was learning from the folks that tell everyone to
do whatever they want to do. Where have I seen that?
73 from Rochester, NY
Jim<

Given the choice, I believe most Americans would believe in doing what
they want to do as opposed to letting those not in a position of law
enforcement dictate what their behavior should be.

Jerry saying the police must stay below 4 watts is like saying they have to
do the speed limit. The 2 down sides of being a cop are the pay sticks
(except LI NY) and people shoot at you. The upside is you get to drive a
fast car fast.
Yes they are Butcher shops. Thats why I always recomend leaving the
radio untouched and save the money for a good quality amp:)
I read the reports and thank you. I now know that Hams get busted and mere
cb'ers get warnings. I also know that whoever's phone number is that you
posted is now fuming.
Sincerely
Ken

Thanks Jerry I enjoyed that allot it was the funniest thing ive read in years.
Now as us cb'ers like to say"here comes my 55 gallon drum of cyber WHUP-ASS:):)
First off after 911 while you hams where in some motorhome acting like lt. Uhura on startrek cb'ers where bring in need supplies and SAVING lives. Not one hambo took the rubble and human remains down to fresh kills land fill. If you guys did you'd go nuts cause it violate several hazmat regs and TOTALLY violated several others. cb'ers could have said "no-way" to suppliing NYC afterwards cause doing so was a traffic nightmare. As for giving info to the families what info? the towers fell down! Wow that was news! CB'ers came through in spades. As for what congress thinks congress thinks sex with interns is acceptable behavior.
As for trains thats funny. In the world of just in time warehousing coupled with the fact that a majority of the economy is small buisnesses trains are a joke. Then only reason they are still here is government subsidies. Face it 90 percent of EVERYTHING was brought to you by billy bigrigger with his big-radio. I have been to thousands of businesses and I think 5 where accesable by rail. A brewery a 2 chem plants and 2 paper mills. And the brewery only used rail for raw material. Beer is perishable and it takes about a month to transport by rail point to point? As for disruptions in 2 weeks you would eat your ICOM.
Yes we have a rebel attitude. So did Jefferson Washington Adams (can ya hear the patriotic music playing). Gen Arnold was more like a Ham..thought the declaration of independance was almost as bad as freebanding.
One finall thing. I enjoy keying up my mike and saying"The new breed has saved trucking" and watching the old breed of truckdrivers go absolutely insane" They can be as bad as some of your Elmers. And once I announced FCC was in the scalehouse checking for BIG Radios and then ch 19 exploded! Everyone when nuts. I was lauphing my butt off! What was so funny was that they believed it!
So calm down and don't have a stroke:) newsgroups and Home PC's are toys just like radios:)

I figured that is what you meant, I just wanted to elaborate a bit.

> CB transmitters are NOT designed
>to be operated behind an RF power amplifier. If they were then the
>manufacturers would have to build into them much cleaner oscillators and
>have much better isolation between the various IF and mixer stages.

Nearly every radio that is intended to be an exciter for an amplifier
and many quality stand-alone rigs have full shielding around each and
every stage, not just the whole radio crammed onto a PC board like
they do with CB radios. There are a few exceptions; I think I have an
old Utac (or something like that) that is very well made. But no CB I
have seen made in the past twenty years is designed with any real
quality.

> While
>CB transmitters meet the FCC's MINIMUM standards that's all the have to do.
>As you stated when you place one behind a "linear," and I use that term very
>loosely since most CB amps are not linear, not only do you amplify the
>intended 27MHz signal but EVERY other signal that comes out of the antenna,
>including all of the phase noise created by the poorly designed PLL
>circuitry.

Ain't THAT the truth! You don't even have to key up to see digital
noise on the spectrum analyzer coming out of the RF jack, and when
that stuff is picked up and ampilified with just the Class C final
-inside- the radio... yuck!

>In my experiences I can't think of very many instances where the RFI was
>caused by a PROPERLY OPERATING transmitter. The latest is with a digital
>satellite TV that I just installed. I could key up on 2-meters and the
>system would go "dead." The signal strength would go to zero and the system

>would come right back. No I wasn't running a KW but only 50 watts into a
>J-Pole that was 100 feet from the dish. What was the cure? Three 8" loops
>in the coax feeding the dish. Now the signal quality and signal strength
>indicators don't even budge.

Yep, when it happens that a clean transmitter is causing RFI, the
problem is usually overloading. It depends on how much power is being
radiated and how close the antenna is to the device. And like I said
before, those aren't "typical operating conditions" for consumer
electronics, which is why one of the rules for hams is to use the
lowest possible power to maintain comm.

1265. Re: CB Trucks and the FCC//Attn: BILL NELSON

Newsgroup: rec.radio.cb

Actaully I use my cell more then my cb. For traffic however I use cb 880 am
and 1010wins for NYC. And it annoys me when truckers go nuts over cell phone
users like Hams go nuts over cb'ers
Twice truckers who have never been to Long Island got directions via
phone and then luckily found out they took them onto the parkway. Thats a
big problem on LI cause when trucks do that theu become flatbeds upon the
first bridge they hit. BTW since the cell phone ban in New York the traffic
reports went to the toilet. 1010 wins is begging people to call about
problems.
No its not a good troll but you dont need one to drive some people nuts.
My best work was as "h" titled "freebanding and the foundong fathers" I got
dealth threats over that one:)
On L.I. cb works splendidly. With the mix of local and over the road
drivers you can literally find directions anywhere. And usually all the
fighting stops to give a guy some local....then promtly starts up in
earnest.

True... but we were talking about a fan. I was just making a point that
moving air over the heat sink doesn't necessarily mean the use of a fan...

It's not a matter of cost... it's a matter of necessity.
Adding unnecessary components to any design lowers the reliability.

The FCC (if they really want to) can use 'spectral fingerprinting' to
determine one radio from another. But that is a hard-core enforcement
tactic usually reserved for NSA and investigations and military
operations.

>>, but it would be much
>>easier just to get yourself a legal CB radio. And since most of these

>Galaxy DX-2547 base.

Most of these radios become popularized because of their ability to be
modded, not because of their quality. If all you want to do is talk on
the Citizen's Band, just find a radio that works and use it. It's that
simple. That's what the service was intended to be -- simple.

Got an idea for you who like to disturb for the fun of it: Next time you are in a grocery store, walk up to the margarine cooler and loudly declaim, "I can't believe it's not a laxative". Then quietly walk away.

Now pretty soon we got us a movement and the makers of the most pretentious oleo in the history of the biz quietly sinks out of sight and never knows why.

news:uj4d6j2qfe3a40@corp.supernews.com...
I agree totally Rich. I went to the QRZ.com site and did a search for
msgs on cb 11m etc and those losers make voob look human! Apparently
only the best of the hams come to this ng. This is one of the best and
most enjoyable ng's around. Ever visit alt.ham.dx? Its maybe a hundred
posts(compared to 31962 here) and most posts where "where is everybody"
The funny thing is that the subject of cb gets
more posts then anything else among the Hams. Hams talk more about cb
and freebanding then anything else.
Ofcourse both Ham rigs and Cb rigs are toys. CB has legitament
commercial use wher Ham has no legit use and are truely toys. CB is one
of the most exciting hobbies out there and even Hams recognize this.

>OK, you asked for this: Twisted, this is NOT meant as a flame, but is
directed
at Kenneth, and Kenneth alone. <

Hey, no sweat bud, I'm just chillin' checkin' out the scenes and
groovin' on the discussions,.. s'cool!

>Let's look at your allegation that "CB has 'legiti-
mate' commercial use wher (sic) Ham has no legit use are are truly
toys." If what
you say is true, then WHY did the emergency services people ask for
Amateur radio support when the Twin Towers fell and NOT CB? Why did the
Dutch family
whose yacht was attacked by pirates ask for help from the Amateur's
Maritime Mobile Service Net instead of screaming on a CB "BREAK THAR ON
THIS H'YAR MERCY ME, GRE'T DAY 'LIVE THAR CB THAR, YUH GOT AN OLE COPY
THAR, MERCY ME THAR, SHORE THANG THAR, KICK HIT
BACK THAR, BREAK! SQUEAK!! ??????? Hmmmm? Tell me! How come I don't see
a CB desk in the state Emergency Operations Centers alongside the RACES
and ARES desks (Both are HAM organizations.) Why were the HAMS at work
in Colorado during the fires while I haven't heard one damn word about
CBers manning radios and passing health and welfare traffic for families
as well as
providing backup for the regular communications channels? I can just
hear it now:
BREAK THAR ON THIS HYAR COLORADO COWBOY THAR, MERCY ME THAR, WORLDWIDE,
WORLDWIDE THAR, HOW BOUTCHA THAR OUT T'ERE IN THAT T'ERE SKIPLAND THAR,
GRE'T DAY, WE A-TRYIN' TUH PASS THIS H'YAR HEALTH AND WELFARE TRAFFIC

RI'CHERE IN THESE H'YAR COLORADO 'F'ARS (fires), BREAK, GIT BACK THAR!
SQUEAK!" The EOCs would be keeled over in the floor overcome with
laughter!! CB has "legitimate' uses while ham has no legit use? HA! Give
me a break! How come the Feds felt it important enough to pass a
regulation that gives hams a minimum of protection from local zoning
laws that
restrict Amateur antennas? How come States are gradually codifying this
rule?
(the FCC # is PRB-1). Oh, BTW CBers aren't covered by this rule. CB is
so "important", right? I wonder why they didn't include CB? How come
there is a bill in Congress right now to exempt hams from CC & Rs--those
pesky housing
and condo rules that prevent external communications antennas? So far,
its outcome looks pretty favorable. Of course, builders and condo
associations are
fighting it, but, with all the favorable press ham radio has had in
Congress and the
fact that it HAS been recognized as a valuable communications resource
both be-
fore AND after 9/11, it will likely become law. Funny thing: I haven't
heard a thing
about "protections" for CB radio like I have about ham radio. Wonder why
that is?
Even REACT is a dying breed; never see them around here. Could it be
that Amateur Radio has such a cadre of trained, disciplined operators,
such a fine record of responding to emergencies and providing effective
communications that
REACT has nothing to "react" to??? MMffffff! HAHAHAHAHAHA! Sorry for
the outburst, I just couldn't hold it in! During the CB craze, many
police and county
dispatch centers did, indeed, install, CB radios. I asked a local friend
if they still had one in the radio room and he said, "Hell, NO! That
stupid thing drove the operators crazy with all that noise and
ridiculous lingo"! <<mmmmfffft!
ggg--now
control yourself, Jerry>>

Tell me, what is so exciting about a hick yelling the same thing over
and over and over and over, squeaking and beeping and using goofy slang
phrases. Now THAT's boring. How come it is that I see lots of CB ops
list their equipment in their sig and all of it is B O U G H T stuff?
Overpriced BOUGHT stuff?<

Now you stepped beyond the realm of just
Kenneth alone, as I am a cb op, at times.
Gear is worth what one will pay for it.

> One of
those "BIG COIL antennas--I can make for $10.00.<

Make it look as good and we'll go into business. With your antenna skill and my keys to the kingdom of all that is evil in the way of radio, we can get richer in no time.

All you need is some nylon tubing, a lathe/drill, and some copper tubing. Works just as well and the markup is huge.

> Want an antenna for ANY frequency from DC to daylight? Lotsa hams make that, too! Sure, some CBers do the very same thing. Not the vast majority. Can YOU explain what "impedance" is? Can you effectively argue that coax length doesn't matter, and PROVE what you say is true (of course that person would have to be shown live
and in person---not just my word). There are exceptions (phased antennas,
etc),
but it doesn't matter, and I can prove it in person. How many "resistances" must
a radio signal pass thru in your antenna system? Name them? There IS more to
radio than yap, yap, yap, yap, yap.....
I would bet (if I were a betting man--I don't even play the lottery) that if you asked
about all those Congressmen and "Presidents" that worry about truckers' lobbies,
asked them about the relative importance of the 2 radio "hobbies", you would be
shocked to find that Amateur Radio does, indeed, hold a higher level of esteem among the powers that be than CB radio. Truth is, CB radio is regarded as a kind
of "cultish, lowboy" toy that has numbers, but very little substance or importance in the relative pecking order. <

I find that is believed of by most hammies. The rest of the non-radio word couldn't tell the difference between cb and hammie radio. To confirm it, walk up to a stranger on the street and ask him to name which "meter" cb falls under and then ask them to name a single "meter" of hammie radio..

I wasn't talking about the man on the street. Kenneth was talking about the Congressmen, the relative power of truckers lobbies, and "Presidents>" Yet the public DOES know what ham radio is--they may not be able to differentiate
between the two on sight, but they do know what ham radio is. After all, just looking at a car with a whip on it is not enough to tell.

>It IS a toy. Ham Radio is a toy--part of the time, but it can rally professional, organized communications where CB just can't. CB has also garnered a black eye because of the interference and "rebel" attitude regarding the laws governing its use. If you REALLY knew somebody inside, you might find that the bigwigs would LIKE to find a way to get rid of CB radio -at least, in its present form. And it *may* happen, the way things are going. I could just about guarantee that CB is NOT going to "take over" anything as you like to troll. Radio usage is a (read it

carefully now) P R I V I L E G E granted by the government, not a right. You have a right to free speech, not a "right" to use a radio. That privilege CAN be taken away..just like it can for hams. There are discussions right now about sunsetting CB radio and encouraging the use of FRS and MURS instead.

You inflate the importance of trucks and the CB radios they use. For what you
actually use them for, FRS would actually work better. At low power, more trucks
could be on the same channel at the same time without bothering each other. As to
trucks bringing the economy to its "knees", you forget that much of that material now hauled by truck can be put on trains.<

Not most perishables.

Sorry--not true. One of my first railroad jobs was checking the refrigerated cars
in the flat yard to see that the generator was running and that the temperature was
correct. Ever hear of Fruit Growers' Express?

> UPS now ships its trailers on piggyback trains in the US, and Norfolk Southern Railway has something called Triple Crown
Service where there are NO railcars underneath the trailers! The trailers have rail
wheels as well as road wheels, and it is a simply a matter of hooking a locomotive to a long string of these and hauling them to their destination. And if you think ALL
railroads are broke and ineffective, you'd better check again before giving inacurate information. There would be some disruptions, of course, in the event of a truckers' strike, but much of their haulage can be moved by train--enough to prevent the widespread harm done if truckers quit driving.<

I don;'t believe that. You underestimate the power of the trucker's unions. HBO did a special on this very recently.

I am still a member of a rail union. There is nothing that says that a shipper
HAS to ship his goods by truck. Unions don't have THAT much power. And if there were a truckers' strike, sure, there would be disruptions, but much of what
trucks can ship can be hauled on trains, trains can piggyback trailers, and even pull
trailers right on the rails. Many railroads already have this ability. Lots of trucking
companies would suffer more than the railroads would--even causing some who are already teetering to fall over the edge.

> BTW, I worked in the
rail industry for 23 years before retirement and I know what I am
talking about. <

Aw, damn Jerry, you retired with a nice little pension. You can't take
it with ya' brother, whatcha doing with all that cash?
C'mon, let's get these cb antennas rolling.
A small investment and I can almost guarantee ya' we'll sell more than
the hammie bugcatcher antennas.

Hehe--if I make THAT much money, why would I want to work? I am enjoying my
life as is. Retirement doesn make me wealthy, but I do get by to the point
that
I can pretty well do as I please. Hey, I worked ever since I was 15 years
old. I
got out of the race at 52. Why would I want to go BACK to work?

Jerry

So far both y'all made excellent points. It;s a great debate. I'm still
listening not saying a word.......<g>!

Funny, I heard several news reports on TV and read in the paper
about the ham efforts involved with 9/11, but never heard or read
a word about any cbers doing anything.

> As for trains thats funny.

Gotta agree here, even when that train arrives with all those
piggy-backs, there has to be a truck to come haul it to the final
destination.

1275. Re: Kevin Muenzler, WB5RUE claims 27 radio busts this year alone,...

Newsgroup: rec.radio.cb
Date: 2002-07-15 22:18:53 UTC
From: "Kevin Muenzler, WB5RUE" <wb5rue@qsl.net>
Message-ID: <3d334896$0$13947$39cecf19@nnrp1.twtelecom.net>
Source record: 130304

Your twisting is hopeless and has taken this thread WAY out of the way. Have fun with someone else for a while. You may also claim victory if you wish because I give up. But one more/last thing. I never said that 27 were IN court. I said that 27 were either on their way TO court, IN court or through court and didn't specify how many of each. Twist away Twistyboy because I'm done with you.

Kevin, WB5RUE

"Twistedhed" <twistedhed@webtv.net> wrote in message news:7438-3D32E3EC-115@storefull-2312.public.lawson.webtv.net...
From: wb5rue@qsl.net (Kevin Muenzler, WB5RUE)
"Twistedhed" <twistedhed@webtv.net> wrote in message news:21444-3D2F02D7-100@storefull-2317.public.lawson.webtv.net... What I have done, is verified that the
procedure involved with the FCC takes much longer than six months for an actual court appearance to take place, let alone a conviction by the FCC.

>I guess you missed the part where I said that a great majority of these issues never make it to court. <

What did you do, drink all weekend and
do nothing but reply to my posts?
I guess you were drunk when you claimed that all 27 of them went to court since the 27 of December. Now here you are trying to enter another equation.

>The evidence is so overwhelming that the guy's an idiot to push the issue in court. What you have "verified" does not make me a liar. I believe I said something like these guys are either on their way to court, in court or through court. Please show me the lie. <

You said 27 were already IN court, all made to appear since Dec 27. See, you don;t know what you said.
Do you need to see it for yourself before you lie about it, deny it, and insult me for pointing it out?

>So then you HAVEN'T actually made contacts to "prove that I am lying."<

Of course I have.
Ask a lawyer that worked for the FCC is your time frame is even remotely possible. There is no chance of your lie being even remotely true. That won't cost you anything, as there is a hammie readily accessible that loves to disburse wisdom concerning his golden days with the feds. All you gotta do is ask, Muenzler, not dance.

>...and his name is? "Lawyers" don't work for the FCC. <

Wana bet?

>IF he used to
"work for the FCC" then he was a federal prosecutor assigned to the FCC.
<

Damn Kevin, the whole group is howling at your lame azz, as most of the group is aware of who this gent is and he was indeed an FCC lawyer. Instead of coming off like a jackass in all your posts and trying to "get something on me", you really ought to slow down,,,you're making quite the fool of yourself with your ignorance.

>Please what's his name so I can verify his previous employer, his bar status, etc. <

Oh, man. Talk to Lelnad. He claims his name is Phil Kane. One of his crossposts are in here now. But merely watching you flop around like this is about as far as I can go.

>I understand now. YOU are lying. Or perhaps, again, "lying" is too strong of a word. You were misleading, you misrepresented what you had actually done, YOU LIED! <

(Chuckle) Hehhe..Sorry to burst your bubble, Kevin, but you're gonna have to wake up much earlier than that if you are going to look for something to personalize.

>Stop being paranoid Twistyboy. It wasn't mean personally, just like you calling me a liar is not meant personally. You're a hypocrite too.<

Actually, I'm not. I really haven't insulted you except for referring to you as a liar, and as you claim, it's really not a lie when it's true, so prove it's not true.
Now you are espousing and sharing your true ignorance concerning your non-knowledge of the FCC. But you did that once, concerning your lies abuot you assisting in getting ALL 27 radio violators to a federal court apearance since the 27of December. Rock on, lieboy.

>Did you "make calls" that were unable to verify my claims or did you make calls that were able to contradict my claims. There is a BIG difference. <

This is getting better by the day. Give you ego trippers enough rope and ya'll piss all over your own legs after the selfhangin's. Here's more fodder for your featherless cap..if the FCC brought anyone to court AND convicted them as you claim, within the time frame you claim, it would have been the FASTEST convictions for cb or hammie related behavior to date.

>Ok, again you are putting words in my mouth. Did I say convictions? <

Nope, you said busts.

>Nope, not once. Just as I never claimed to have made the busts. <

But you DID say busts. Why do keep saying you dind't say busts when you did?

>Just because someone has been served (received a Notice of Apparent Liability or "NAL") doesn't mean that they are convicted. You're causing your own confusion Twistyboy. <

Not at all, junior..you claimed busts, and you claimed 27, and you claimed all in Texas federal court since Dec. 27.

>You see I have never seen your brain, I don't know anyone else who has ever seen your brain. In fact I doubt that anyone in the entire world has seen your brain. So we can't verify that it exists at all. So if we use your logic of "unable to verify" then your brain doesn't exist. <

Your trouble remaining focused on the subject and attempts at making your agenda one of spewing your venom and insults my way is dangerously close to becoming trollish.

>No trouble remaining focused Twistyboy. <

Oh, so the trolling is intentional. Now how did we all figure that?

>I was showing how your logic doesn't work. <

With insults? You have PLENTY to learn, grasshopper. Effective communications skills, peppered with a bit of temperance and diplomacy will improve what you lack.
Logic, hmm? Logic that says when I point out you said something when you denied saying it, calls for you to tell me it was a figment of my imagination and that I'm a liar? Then not even the good graces to admit it when caught, but to blatantly and callously claim "I forgot?" With your logic, no one is interested. You're an island unto yourself.

>According to your logic since you can't verify my claims they are lies.<

According to ANYONE's logic, once can not verify lies, but one can prove it. Think about it.
But, you appaer begging for an explananation. According to journalistic standards, they are lies. A claim comes forward, it is asked of the claimant to provide proof. Either you produce it or you don't. Anything you say will not lend credibility to the claim without tangible proof. No proof, no story, and the claim is discarded and the source is marked as unreliable. Just like you. Your late attempts at saving face serve only to dig your hole deeper, such as the ignorance you shared concerning FCC lawyers.

>Since I can't verify the existence of your brain then, according to your logic, it doesn't exist. Sorry I made it so complicated for you. <

But everyone that frequents the ng can see the
lies you tell and lie about some more. Do you have an alcohol problem, Kev? You seem to be incapable of posting and focusing on any issue except for your intense personal dislike of me.

>I thought you don't make personal attacks TwistyBoy. Now we've added hypocrisy to twisting. <

It was a quesion, and you opened the door. I never said I don't get personal...matter of fact, I have always held that I return what I get. If you have a problem with it, you should dig what you are dishing out.

>They, like I have said, can see that you are the TwistMeister.<

They most certainly can, Kev, and all that have met me and most that have been around here any length of time also know I don't lie...period.

>No, you don't lie. You twist someone else's words around and call them a liar. <

You said 27, Kev..not me. You said "Busts", not me. You said you I began the insults, when I showed it was indeed you that began calling names. You said you assisted in getting them all to appear in federal court since the 27 of December, not I.

>Misrepresentation is the same as lying Twistyboy. Above is a perfect example. Now you say that I claimed convictions. I KNOW I never said that.<

Right, you said "busts." and clariied as much.

>So you say that I am incapable of focusing? <

Absolutely! Of course you are. You have now resulted to insults in each of your postings.

>Let's see. The original title of the thread was the I claimed 27 busts this year. Where has it gone from there. FCC OFFICIAL OBSERVERS, convictions, busts....<

Which has nothing to do with insults in all your posts, but you quickly seem anxious to glaze over this and change the subject yet again. Also, you chose to focus on those instead of your big lie of 27 busts in Texas and your assistance in gettiing them ALL to federal court since the 27 of last December.

Oh yea the pirates? What where they doing going slow through the straits of malaca ot the java straights? I was a merchant seaman qmed on a ship during the gulf war. The pirate activity jumped cause all the western navies where in the arabian sea. Stupid captain set our speed at 15 knots. Luckily they didnt take the coffee pot. That dutch family was stupid to begin with. Probably scoffed at "pirates" in the 21st century. As for impedance is that like capacitance or reactance? You could have asked me what happens at the PNP juntion or who MOSFET is. BTW I have been told ALLOT that I need 18 feet of coax. I have 6 feet, the shortest length I could get. Could I argue it? yes Efectivly? depends on the audence. Say dialectic and peaple give you weird stares.
Who did more for radio then Marconi? a ham? a cb'er? wrong..Rush Limbaugh reinvented radio and changed radio more then anyone. How wise was the FCC when they almost made mechanical color TV the standard? Was they guy who invented the IC or the transistor a Ham? Or was the guy who discovered quantum mechanics which these devices based on a Ham?
Oh if you want to see flames see the post in QRZ.com from a guy who went to school to become a profesional broadcast engineer and reported how the pros look on Hams as Hams look on CB'ers....They went stark raving insane. One loon wanted to pay airfair just to prove he knew more.
And Nasa used roger beeps on the moon landing so ya know there cool. I could just imagine one of your fellow Hams scraming in the movie theater when Lovell said "Houston we've had a problem(bgi ole roger BEEEP:)"

Is that some pearl of that wisdom you picked up from Eitner? You can
add components to -improve- reliability of any device, and it's done
all the time. Adding active cooling to aid heat dissipation will MOST
CERTAINLY improve reliability. Just like adding a current-limiting
resistor to a device with a low maximum current rating will DEFINATELY
improve reliability. And adding an overload-protection pair of diodes
to the input of an FET will UNDOUBTEDLY improve reliablity. As usual,
you don't know what you are talking about, Brian.

We're working on that issue?? Who is we?
It must be killing you that Yahoo auctions are selling amps and 360 channel CB's.
There is nothing wrong to sell a 2510 to a valid ham radio operator. If you picked one up at a garage sale it would be up to YOU to use it legal by having a ham ticket.
If you mod it for CB then you would be the one who is illegal. The equipment has little to do with it.
If you purchased a used car, and I'm sure you have. If you drove that car home with plates other than
registered to that car, you would be illegal.
Haven't you wasted enough bandwidth on many newsgroups with your type of intimidation??
By responding, I too am wasting time and space. I apologize to the groups.

Yea but they totally didnt mess with trucks. And if you show me 10 trucks I
can point out the 7 that definately have illigal radios.

Twist. What I posted is the script from the FCC Call Center. If you
wish to confirm this, dial 888-CALL FCC (888-225-5322) and press 3. Go
argue with them. LOL. Good luck.

-Aaron-

SCRIPT FOR F.C.C. CALL CENTER

1. C.B. LINEAR POWER AMPLIFIERS

Q. What is a "Linear Amplifier"?
A. This is a radio frequency (RF) power amplifier which increases the
output level of a 27 MHz C.B. radio transmitter above the level which
is permitted in the FCC rules.

Q. How much power are C.B. transmitters allowed to use?
A. Section 95.410 of the rules limits the output power of a C.B.
radio which is using Amplitude Modulation (AM) to a maximum power of 4
Watts. If the transmitter is using Single-Sideband, the maximum
permissible power is 12 Watts "Peak Envelope Power" (PEP).

Q. Is the use of a linear amplifier at a C.B. radio station legal?
A. No. Section 95.411 prohibits the use of any kind of power
amplifier at a C.B. radio station.

Q. Why do some C.B.'ers use power amplifiers?
A. Some C.B. radio operators use power amplifiers in order to
increase the range of their C.B. radio transmissions, or to over-ride
the signals from other C.B. stations on the same radio channel, thus
being able to monopolize the channel, in violation of Section
95.407(e) of the rules.

Q. Why is it illegal to use a power amplifier on my C.B. radio?
A. The C.B. Radio Service is intended as a strictly local

communications service, not as a substitute for the Amateur Radio Service for communicating with stations hundreds, or thousands, of miles away. So using more power than the rules permit serves no legitimate purpose. Since all 40 of the C.B. radio channels must be shared by all users (no user may "own" a particular channel), the use of excess power can have a detrimental effect on other users of the same, and adjacent, channels.
In addition, the use of excess power greatly increases the possibility for creating interference to neighboring consumer electronic devices such as radio and television receivers, hi-fi and stereo audio systems and telephones.

Q. Are there other names for these devices?
A. Yes. Linear Power amplifiers are also called "Linears", "Power Amps", "Heat", "Foot-warmers", "bi-linears", etc. Some transistorized models are referred to by the number of "Pills" in the unit (a "Pill" is a way of referring to the transistors, so-called because the transistors resemble an over-sized Asperin tablet).

Q. How much power do these amplifiers produce?
A. Typical amplifiers produce from 50 to 200 Watts of power. However, some manufacturers sell units which are capable of producing thousands of Watts of power.

Q. Are there any types of legal linear amplifiers?
A. Yes. Amplifiers which are manufactured and intended for use by licensed amateur radio stations, and certain other licensed radio services, may be legally manufactured and sold. However, there are certain limitations which these devices must adhere to. One of these limitations is that such amplifiers must not be capable of operating in the C.B. band.

Q. What are the limitations of legal amateur radio linear amplifiers?
A. Power amplifiers intended for use at licensed amateur radio stations must comply with the provisions of Sections 97.315 and 97.317 of the F.C.C. rules. Among other things, they must be approved by the F.C.C. In addition, any amplifiers intended for use on any amateur frequencies below 144 MHz shall exhibit no amplification capability on frequencies between 26 and 28 MHz.

Q. How do I know if an amplifier is legal or not?
A. All legal amplifiers must be issued an F.C.C. grant of equipment certification. Every such approved amplifier must have a sticker indicating the name of the manufacturer and the F.C.C. Identification number (FCC ID). This FCC ID number can be verified by checking the F.C.C./OET Equipment Authorization database on the F.C.C.'s Web Page. If an amplifier does not have such an FCC ID, it is not a legal amplifier.
The F.C.C. Laboratory can provide a list of manufacturers who have been granted equipment authorizations for their approved linear power amplifiers.
The F.C.C. Laboratory can also provide (an incomplete) list of

known illegal amplifiers. This list keeps growing as additional makes and models become known to us.

Q. I have an F.C.C.-approved amateur radio linear amplifier. Is it OK for me to modify it to operate on the C.B. frequencies?
A. No.

Q. Can I sell my linear amplifier?
A. Only if it is an F.C.C.-approved amplifier. The importation, manufacturing, marketing, use or possession of non-approved amplifiers is illegal.

Q. If I can not sell it my illegal amplifier, what can I do with it?
A. Destroy it.

Q. I see linear amplifiers offered for sale on Internet sales sites. Is this legal?
A. Only if they are F.C.C.-approved amplifiers. F.C.C.-approved amateur radio amplifiers which have not been altered in any manner so as to operate on the C.B. radio frequencies, may legally be sold to other amateur radio licensees. The sale of any type of non-approved C.B. amplifier within the United States, under any form of disguise, to anybody, is illegal.

Q. I tried to sell my linear amplifier on an Internet sale site, but it was rejected by the administrator of the sale site. Is there anything I can do to prevent them from pulling my amplifier from their sales?
A. The F.C.C. has no direct control over Internet sales sites. The sale site administrators develop their own policies regarding the sale of potentially illegal devices or equipment. If the sale site administrator asks the F.C.C. about the legality of a particular type of device, we will explain our rules and policies. However, it is up to the sale site administrator to make the final decision as to whether to accept or reject any particular device for sale.

Q. I see various manufacturers and vendors advertising C.B. power amplifiers on their Web sites. Is this legal?
A. No. The importation, manufacture, sale or offer for sale, of non-approved amplifiers is illegal.

2. NON-APPROVED C.B. RADIOS

Q. What is a legal C.B. radio?
A. All radio transmitters and receivers which are intended to operate on the 27 MHz Citizen's Band (C.B.) channels must be approved by the F.C.C. before they can be imported, advertised, sold or used. The manufacturer must be issued an F.C.C. grant of equipment authorization, called "certification", as indicated by an FCC ID on each unit. If the radio has a label showing an FCC ID, and the ID can be verified by checking the Equipment Authorization database on the F.C.C./OET Web page, then the radio is legal.

Q. What kind of radios are illegal to use on the C.B. radio channels?
A. Any radio transmitter, receiver, or transceiver which is designed by the manufacturer to operate on the C.B. radio channels, but which has not been granted an F.C.C. equipment authorization is illegal. These non-approved radios may appear in several different forms:
1. "10-Meter Amateur" radios, which have been designed so as to be readily alterable to operate on the C.B. radio channels, and/or on other non-amateur frequencies in the frequency range from about 24 to about 32 MHz;
2. "Export" or "full channel" radios, which are designed to operate over all, or a portion of, the radio spectrum from about 24 to about 32 MHz, including the 27 MHz C.B. radio channels; or
3. F.C.C.-approved C.B. radios which are designed so as to be readily alterable to operate on frequencies in the range from about 24 to about 32 MHz, which are not assigned to the 27 MHz C.B. Radio Service.

Q. What do you mean by "readily alterable"?
A. This means that the user of the radio can add, or change, its operating frequencies by simply flipping an internal switch, by clipping the leads of, or installing, a simple component such as a diode, resistor or jumper wire, by installing, moving, or removing, a jumper plug, by connecting or disconnecting a connector, by replacing a plug-in semiconductor chip, or by programming a semiconductor chip using special access codes or an external device, such as a personal computer.

Q. What are these other frequencies between 24 and 32 MHz used for?
A. These frequencies are assigned to many different licensed radio services, both in the United States, as well as in other countries. Authorized users include Maritime and Aeronautical radio stations, standard time and frequency stations, international broadcasting stations, amateur radio, and government stations. A portion of this spectrum is also allocated to radioastronomy, where scientists are attempting to listen to very weak radio signals coming from distant stars and galaxies. No radio transmitters of any kind are permitted within these radioastronomy bands, so any earth-bound transmitted signals can completely disrupt radioastronomy observations.

Q. I don't hear any other stations on "my" frequency, which is not one of the 40 allocated C.B. radio channels. So what is wrong with operating my radio station here?
A. You may unknowingly cause interference to legitimate communications. Many of these frequencies may appear, to the casual listener, to be unused. Some of the authorized users may be using emission types which can not be plainly detected. Or, their transmissions may be intermittent. You will not hear any legitimate signals within the designated radioastronomy bands. However, just because a frequency sounds clear, that does not mean that it can be used without proper authorization.

Q. Why do some people operate illegally on these frequencies?
A. Many of these frequencies may appear to be "free" of any legitimate users, so some people think they are "free for the taking". The illegal radio operators are commonly referred to as "freebanders", and use their radios as a form of hobby, similar to Amateur Radio. But for many reasons, these people choose not to obtain an amateur radio license. They operate on these frequencies because under certain weather and radio propagation conditions, their signals can extend all the way around the world, enabling them to communicate with other similar unlicensed stations.

Q. What can happen if the F.C.C. catches me operating on an unauthorized frequency?
A. You are subject to severe penalties, including monetary forfeitures, confiscation of your radio equipment, and possibly even jail time.

Q. I've heard that some of the "big name" amateur radio equipment can also be altered to operate on non-amateur frequencies, including the C.B. radio channels. So why are these radios not considered to be "non-approved C.B. equipment"?
A. First, it must be emphasized that use of this type of amateur equipment on unauthorized frequencies, including using it on the C.B. radio channels or other non-amateur frequencies in the 24 to 32 MHz range, is illegal, and doing so will subject the user to the same penalties as mentioned above.
That being said, there are legitimate reasons for some amateur equipment to be used on certain non-amateur frequencies, such as on military M.A.R.S. (Military Affiliate Radio System) and C.A.P. (Civil Air Patrol) frequencies. MARS and CAP radio stations are only authorized to operate on specific assigned (non-amateur) frequencies. With just a few exceptions, most of the assigned MARS and CAP frequencies do not fall within the 24 to 32 MHz frequency range. Although some models of amateur equipment (manufactured by companies such as Alinco, Icom, Kenwood, Ten-Tec, Yaesu, etc.) may be capable of operating on the C.B. radio channels, they do not display the assigned C.B. channel number, nor are they designed to deliberately facilitate operation on the C.B. channels.

3. "LONG RANGE" CORDLESS TELEPHONES

Q. I occasionally see advertisements for cordless telephones having a range of several miles. How can this be?
A. No cordless telephones which are legal to use in the United States have a range of "several miles" or more. Such devices do not qualify for any type of F.C.C. equipment authorization, and they may not be imported, sold or used in the U.S.
Note that we are not talking about Cellular Telephones, or PCS phones.

Q. What frequencies are used by these illegal long range cordless telephones?
A. Such units may appear with just about any combination of base and

handset frequencies. Typical frequency combinations which we are aware of include: 52 and 154 MHz, 145 and 230 MHz, 43 and 162 MHz. All of these frequencies are allocated to various licensed radio services. The legitimate users of these frequencies all experienced severe interference from the illegal cordless telephones.

Q. Then what kind of cordless telephones are legal?
A. Only cordless telephones which have been issued an appropriate F.C.C. equipment authorization, and have a label showing the FCC ID number, may be imported, sold or used.

Q. What frequencies are used by legal cordless telephones?
A. The first cordless telephones operated at approximately 1.7 and 49 MHz. Later models operated at 46 and 49 MHz. Newer models operate at 915 or 2400 MHz.

Q. What is the maximum range I can expect from a legal cordless telephone?
A. The maximum range will depend upon many factors, such as obstructions between the base and handset, and the operating frequency and power of the units. In general, the maximum range is usually a couple of hundred feet. Some of the newest units which use spread spectrum digital technology, can have a range of up to several hundred feet.

Q. Where may I find the rules that pertain to legal cordless telephones?
A. These rules are contained in Part 15 of the F.C.C. rules for low-powered, un-licensed, devices.

Q. If I need more range than a legal cordless telephone will provide, what can I do?
A. The only legal means to obtain a greater range is to use a Cellular phone or a PCS phone.

4. POLICE SPEED RADAR DETECTORS AND RADAR JAMMERS

Q. I've heard that RADAR speed detectors are illegal. Is this true?
A. Some individual states have passed laws making the use of RADAR speed detectors illegal. The F.C.C. rules currently have no such prohibition.

Q. What about the police RADAR units, themselves? Are they legal?
A. Yes. Law enforcement agencies are licensed by the F.C.C. to operate speed RADAR devices.

Q. What about RADAR jammers?
A. The importation, manufacture, sale and/or use of any kind of RADAR jammer is illegal. This includes both the passive and the active types of jammers.

Q. Why are RADAR jammers illegal?
A. The Communications Act says that deliberate interference with a

licensed radio service is illegal. Since police RADAR units operate under the radio licenses of the police agencies using them, they are therefore protected by the Act.

Q. I've also heard that some RADAR detectors interfere with satellite reception. Is this true?
A. Yes, some RADAR detectors units have been found to cause interference to certain types of commercial and residential satellite television and data receiving dishes. This is a relatively new problem, and the F.C.C. is currently considering various methods of curing it.

5. "LONG RANGE" AUTOMOBILE SECURITY AND ALARM SYSTEMS

Q. I occasionally see advertisements for "long range" auto security/alarm systems. Are these legal?
A. There are two basic types of legal system, with different F.C.C. rules for each. One type operates under Part 15 rules, does not require any kind of station license, but has a limited range. The other type operates under a license, and has greater range.

Q. What is the typical range for most legal short range automobile remote control/security systems?
A. These units are radio transmitting devices that operate without a station license under Part 15 of the F.C.C. rules. These rules generally limit the range to a couple of hundred feet. A few models have vehicle-mounted alarm transmitters which legally have a greater range. However, in most cases, if the manufacturer claims a range much greater than a few hundred feet, the unit may not be legal. Check to see if the units display an FCC ID number.

Q. Do these devices require F.C.C. approval?
A. Yes. The manufacturers of all such Part 15 devices must obtain an F.C.C. grant of equipment authorization, and all units must display the assigned FCC ID number. This FCC ID can be verified via the FCC/OET Equipment Authorization database on the F.C.C.'s Web page.

Q. What frequencies do these Part 15 systems use?
A. Most of these short-range devices use frequencies in the 250 MHz to 450 MHz frequency range, although some of the vehicular alarm transmitters operate at 27 MHz or 49 MHz. The frequencies are shared with other radio services, on a secondary, or "sufferance" basis. According to the Part 15 rules, these devices must not cause interference to other radio services, and they must accept any interference they may receive from other radio services.

Q. Tell me about the legal auto security alarm systems which have a greater range.
A. One such system is known as Lo-Jack, and works in conjunction with local law enforcement agencies. Other systems use the Cellular telephone or PCS services to contact an alarm center. These systems use some type of security service, and have a monthly fee, similar to

residential and business security services.
6. SCANNING RECEIVERS ("Scanners")

Q. I've hard that it is illegal to use my scanner to listen to Cellular Telephone conversations. Is this true?
A. Yes. Listening to other people's Cellular, PCS or cordless telephone conversations is considered to be an illegal form of "wire tap", and is illegal.

Q. Then why do some scanners pick up the Cellular telephone channels?
A. Only scanners which were built before 1993 have the ability to tune to the Cellular channels. Section 15.121 of the rules was added to the rules in 1993, which prohibits the sale of scanners which have the ability to tune to, or of being modified so that they can tune to, the Cellular channels.

Q. Why is it illegal for me to listen to other people's Cellular telephone conversations?
A. The U.S. Congress decided that people who use Cellular or PCS telephones should be able to expect the same type of privacy, when using their wireless telephone, as they expect when using a regular telephone.

Q. You mentioned "modifying" a scanner so that it can tune to the Cellular channels. Please elaborate.
A. Some people found that some newer scanners could illegally be "tricked", so that they could over-hear Cellular conversations, even though they were not tuned directly to the Cellular channels. In addition, some people figured out how to install simple alterations to some scanners so that they could tune to the Cellular channels. As a result, in 1999, the F.C.C. tightened up the scanner rules so that these "tricks" or alterations can no longer be performed on scanners.

Q. I've heard that some law enforcement officers have confiscated scanners from people who were listening to their two-way radio conversations. How can they do this?
A. The use of a scanner to listen to Public Safety (such as police, fire or ambulance services) or other types of two-way radio conversations is not illegal. These officers do not have authority to confiscate legal devices.

Q. Can I tell my friends what I over-heard the police talking about?
A. No. Section 705 of the Communications Act of 1934, As Amended, states that it is illegal to divulge anything that you over-hear, to anyone else. In addition, it is illegal to use any information you may obtain for your own benefit. Violation of these rules can result in severe fines and/or jail time.

Q. I am a licensed Amateur Radio operator. My hand-held VHF Amateur Radio walkie-talkie will allow me to listen to these other radio services, even though it is not considered to be a "scanner". Is there any problem here?

A. Generally, no. However, all of the prohibitions listed above still apply. You can not use it to listen to Cellular or PCS telephone conversations, nor can you divulge or benefit from anything you may over-hear.

7. CELLULAR TELEPHONE "JAMMERS"

Q. I recently saw an advertisement for a device which is supposed to prevent Cellular Telephones from working in certain areas. What is this?
A. Some people believe that it is impolite for people to use their Cellular telephone in certain public places, such as in concert halls, movie theaters, restaurants, etc. So some manufacturers have developed a device which blocks the Cellular radio frequencies, over a limited geographical range.

Q. Is this legal?
A. No. The use of such a radio jamming device is considered to be causing malicious interference, which is prohibited by the Communications Act of 1934, As Amended, and by F.C.C. rules.

Q. Then why did I see such an advertisement?
A. The importation, manufacture, marketing or use of such a jamming device in the United States is illegal, and is punishable by severe fines, equipment confiscation, and/or jail time.

8. "LONG RANGE" F.M. RADIO BROADCASTING TRANSMITTERS
NOTE: This does not refer to the F.C.C.'s LPFM proceeding which is currently under way.

Q. I've heard of un-licensed F.M. radio stations (in the 88 - 108 MHz F.M. radio band) which have a range of a mile or two. I thought these transmitters only had a range of a few hundred feet. What gives?
A. Part 15 of the F.C.C. rules does allow the use of low-powered un-licensed F.M. radio transmitters. But the rules limit the range of legal transmitters to a few hundred feet. Some manufacturers are marketing illegal transmitters which have much more power than the Part 15 rules allow, providing a range of up to a mile or more.

Q. What are these long range transmitters used for?
A. We have seen several different types of use, including: stores - to advertise sales or special items; restaurants - to advertise the day's special menu item; and public schools - to announce the day's cafeteria menu, after-hours activities, athletic events, and other information to the student body and their parents while at home.

Q. Are they legal?
A. No. The importation, manufacture, marketing or use of these over-powered Part 15 transmitters is illegal, and is punishable by severe fines, equipment confiscation, and/or jail time.

Q. Is there a legal way for me to install and use such a "long range" F.M. radio transmitter? I'd be willing to obtain an F.C.C. radio

station license, if necessary.
A. The F.C.C. is presently in the process of developing a "Low-Power F.M." (LPFM) Radio Service. However, the number of licenses which will be issued will be small, and the applicants will have to meet certain qualifications. If you do not meet the qualifications to obtain an LPFM license, there is no other legal way to operate such a transmitter.

> lt. Uhura on startrek cb'ers where bring in need supplies and SAVING
lives.

NOPE! When the towers came down, the hams were in the on site command
center augmenting the communications that were disrupted by the downed
towers.
The towers held many communications repeaters and antennas--including cell
towers. Please DOCUMENT the direct saving of lives by CB radio ops. i
can merely by talking with Keith Hosman--wasn't he THERE?

> Not one hambo took the rubble and human remains down to fresh kills land
> fill. If you guys did you'd go nuts cause it violate several hazmat regs
and
> TOTALLY violated several others.

Can anybody else tell me what the above paragraph means? It makes
absolutely
no sense at all.

cb'ers could have said "no-way" to
> suppliing NYC afterwards cause doing so was a traffic nightmare.

Huh? I remember receiving a call here in NC at 7PM that evening asking me
to
get ready to take a vanload of blood plasma to NYC. Turns out the plasma
was
in Greensboro, and also a driver was found at that location as well. So I
didn't go.

As for
> giving info to the families what info? the towers fell down!

The damn cellphones were out! The normal police and rescue frequencies were
disrupted! After dealing with immediate, emergency traffic, some of the
hams handled traffic for families of the fire and rescue personnel that were
unaccounted for. Not to be ugly, but your comments reveal the very reason
the CB would NOT be used: T R A I N I N G, D I S C I P L I N E, and R E S
O U R C E S!!!

Wow that was
> news!
CB'ers came through in spades.

Yep, I can hear it now: "BREAK THAR, YUH GOTTA OLE COPY THAR ON
THIS HYAR REDDIO UP 'ERE IN NOO YAWK THAR, MERCY ME THAR,
SHORE THANG THAR? I GOT THIS HYAR EE-MER-GEN-CEE TRAFFIC
TUH GIT UP 'ERE TUH YOU 'UNS, BREAK BREAK GIT BACK 'ERE"!
Yep, real professionals, that. While the hams were sending formal messages
all over the nation sending appeals for materials, supplies and responding
to offers, just
how did them thar CBers thar "come thru in spades"? Hmmmm?

As for what congress thinks congress
> thinks sex with interns is acceptable behavior.
And they are the ones that *may* get besieged with pleas for relief from
the inter-
ference caused by those worthless BIG "Reddios".

> As for trains thats funny. In the world of just in time warehousing
> coupled with the fact that a majority of the economy is small buisnesses
> trains are a joke. Then only reason they are still here is government
> subsidies.

You are ignorant of and totally clueless about the rail industry. One of
the biggest
misconceptions is that railroads are on some kind of government subsidy.
The only
railroads that received such help were CONRAIL (now divided up and owned by
CSX and Norfolk Southern) and AMTRAK! The class I railroads not only are
strictly on their own, but pay taxes AND maintain their own private
roadways. And
just-in-time warehousing is NO stranger to the rail industry. That is
exactly what
Triple Crown Service was FOR!!!! Just in time service for Ford Motor
Company,
GM and Chrysler. The most efficient use of transportation resources is for
material
to be moved by rail over the long haul and local delivery by truck. On long
haul, trucks canNOT compete with trains in fuel and manpower efficiencies.
Instead of
making unsubstantiated claims, go read the unbiased government publications
on the subject. Just think, every time you see a string of Yellow Freight
or UPS trailers on intermodal cars, it's that many drivers that do not have
to be paid for long haul driving. Guy, I spent most of my working life in
transportation, demurrage, expenses, warehousing not to know how it works.
If it were NOT cost effective, you wouldn't even SEE those intermodal trains
with the trucking company trailers on them!

Face it 90 percent of EVERYTHING was brought to you by billy
> bigrigger with his big-radio.
And he can be replaced--just like ALL of us. There is NO such thing as an
irreplacable person.

I have been to thousands of businesses and I
> think 5 where accesable by rail.

Maybe where YOU were, but not HERE! I was a mobile agent at one time where
I visited 12 plants per day to expedite cars into and out of their sidings.

A brewery a 2 chem plants and 2 paper
> mills. And the brewery only used rail for raw material. Beer is perishable
> and it takes about a month to transport by rail point to point?

Nope! Reefer cars can be moved across country in about 1 week--only
slightly
less quickly than trucks.

As for
> disruptions in 2 weeks you would eat your ICOM.
Nope, They are called refrigerated cars. In the past, MOST fruits and
veggies
went this way. Quite a lot of it still does. Or I wouldn't have been out
in the yards
at 3 AM checking reefers for temps and generators running.

> Yes we have a rebel attitude. So did Jefferson Washington Adams (can ya
> hear the patriotic music playing). Gen Arnold was more like a Ham..thought
> the declaration of independance was almost as bad as freebanding.

so YOUR idea of "freedom" is one of a selfish agenda where as long as YOU
get
what YOU want, the HELL with everybody else? Just so your trucks can yell
BABA BOOEY, the other guy, ham or CBer, has to wait because you are so
important. Again, truckers have a mighty inflated opinion of themselves and
their
importance.

> One finall thing. I enjoy keying up my mike and saying"The new breed

So does the military! In a certain oganization to which I belong, they use
a tone
to tell that the radio actually belongs to the organization rather than an
individual member. They do have *some* uses.

(top posting to save all the scrolling)

Around here, they DO have to obey the speed limit unless they are in pursuit and
pursuits must be under certain guidelines. Unfortunately, several people have been
killed over in Charlotte, NC by speeding police cars that had no real reason to be
speeding. Getting turned in to the shift Captain for speeding, you BETTER have
a good reason, and it had better be on the record as to the reason for the
high speed. Several departments have gotten sued (and lost) to the tune of some big
bucks for wrecks caused by reckless officers. Most departments have rules
against random speeding and will mete out discipline for unwarranted speeding.

Seriously, being a cop doesn't exempt one from the rules regarding radios. If a cop
gets discovered by the Feds with an illegal radio or using an amp, he would
be warned, his department notified, and required to rectify the situation.
His depart-ment would also be held responsible for his illegal behavior as well. For me, I have
NO respect for anyone who disobeys the law (I haven't had a ticket since 1981 for
example) and I certainly have no tolerance for a cop who breaks the law especially!

lives.

How so the trucks were bringing in supplies not cb radios, I didn't see any CB groups volunteer there services and time like the Amateur Radio Community did. Remember when cell phones went out ? Remember when the radio comms went out? Yeah about the same time the antenna on the tower went down. There was very little in the way of communications available, even for the NJ state Police and other Pd's, Fire dept, Media, Cell Site etc who had there radio comms on that tower. How did they communicate across the Usa. Go ahead say it Amateur Radio. Yes, Imagine if they tried to use Cb to communicate after 9-11, guys would be dropping the maul on the emergency Op's haha Iamagine they tried to get thru on channel 9 but the bleedover was so bad from channel 6 they could'nt get out 2 city blocks, so they tried channel 16 they got bleedoever from channel 19 couldn't hear a thing. LOL get down the street kenny you sidewalk sissy . The only reason trucks have Cb's is because it is cheap way of communicating with other drivers, you can always talk to "CandyCane" when your lonley.
Cber's were bringing in supplies? No trucks were and trucking companies were being paid to haul that material from the site with drivers that were being Paid.
Do me a favor derilict post one credibile article that says how cb radio or Cb'er helped with 9-11.

> Not one hambo took the rubble and human remains down to fresh kills land
> fill.

Perhaps not how do you know exactly ? I can only assume most ham operators hold more meaningful jobs than landfill refuse drivers, and Cber to boot.

>If you guys did you'd go nuts cause it violate several hazmat regs and
> TOTALLY violated several others.

Who said they would be transmitting there numbskull?

>cb'ers could have said "no-way" to
> suppliing NYC afterwards cause doing so was a traffic nightmare.

Again where did Cbers in general I can only assume that a few of the construction workers may have a cb in his truck have anything to do with helping wtc,
please provide some info where they thank Cb radio operators? Perhaps Rudy Gulliani wrote a letter of comendation to the Cb community where is it? Where is anything you say true, guys and gals driving trucks brought goods in, they didn't come as cbers. I know many drivers who have a cb in there truck and never ever use it, never ever talked on it other than to listen for a traffic report are they all of a sudden cbers?

>As for giving info to the families what info?

You really are a troll aren't you. The info they gave was they communicated with red cross members, other towns, citys, traffic was passed to people at the site handhelds were used all over the site, which link to repeaters and the internet, I know hard to believe you can do all that with your cb, there were no telephones, no cell phones in that area, I believe motorola had come in and set up emergency communications onsite.

the towers fell down! Wow that was
> news! CB'ers came through in spades.

They did ? Just because you make it up doesnt make it true. Where is one shreed of evidance? One article ? Surely as the Ace of spades there must be an article on the internet from some newspaper or Cnn or something?

> One finall thing. I enjoy keying up my mike and saying"The new breed has
> saved trucking" and watching the old breed of truckdrivers go absolutely
> insane"

I can hear you with your redneck echo now......

Ok, Well then what are you using to move air across the heatsink is it your
imagination? You are using 2x 2879's if I am not mistaken,
and you feel no fan is necessary? Are you using a peltier junction that we
don't see?

Ok so your saying your amp doesn't need a fan? But you razzed a few guys
about them not having fans on their class c amps and your amp is ab right
higher duty cycle more heat, and your saying the fan would make the amp less
reliable? How so? How many components are added with a fan ? Uhh just 1
what would possibly be the thing to go.

A dedicated 100 amp service should do it. Easy to light the filament.
It's not that difficult at all to run. I'm sure Peter W. would be happy
to put a transformer together for you.

ANY radio can be modified. I named the rigs above because of their quality.

>If all you want to do is talk on
>the Citizen's Band, just find a radio that works and use it.

I suppose it depends on how serious the *individual* is about their "talking."

>It's that
>simple. That's what the service was intended to be -- simple.

No, it's not that simple. Some would like it to be, but the "Citizen's" Band is no longer what the FCC "intended" it to be...and hasn't been for quite some time now.

Assuming you planned to make some use of the 5kw heat dissipation, you have to figure how to dissipate essentially the output of an electric clothes dryer. Not only do you get to buy the socket and chimney, but you get to build a pressurized sub chassis and blow a whole lot of air, presumably from outside, with the proper back pressure thru the tube and presumably back outside.

I never saw one run in commercial service on single phase but you might be able to I guess if blinking lites did not bother you. You are suggesting 25kw in round numbers which after screens, ventilation, filament, etc. might leave you 18 or so which probably would not fully power the tube on peaks and would more than likely piss off the power company.

This is one of those things where the pride of ownership is exceeded only by the expense.

>>A. You may unknowingly cause interference to legitimate communications.
>>Many of these frequencies may appear, to the casual listener, to be
>>unused.<
>
>And indeed, many of the frequencies
>are unused.

Do you have some universal chart that says which ones are used and which
ones are not? How new is this chart and how precise is it?

>>Some of the authorized users may be using emission types which can not
>>be plainly detected.<

>And some of the users are no more than
>freebanders. Some of the frequencies are empty and deserted.

Do you have a list of these "empty and deserted" frequencies that tells you
that the FCC (or an agency in any other country) has deallocated them?

>>Or, their transmissions may be intermittent. <

>Or there may be no transmission at all.
>There may be no "they".

Same question.

>>You will not hear any legitimate signals within the designated
>>radioastronomy bands. <

>Posting said bands would carry more weight than anything you could
>possibly muster to the table.

You have a list don't you? Oh, I forgot, you only list the "unused, empty
and deserted" bands. I will agree that there really aren't any designated
HF "radioastronomy bands" but there are certain areas that are designated as
"quiet zones." Transmitters are severely limited in these areas.

>>However, just because a frequency sounds clear, that does not mean that
>>it can be used without proper authorization. <

>Yup. And just because a certain frequency is not part of the cb or
>hammie band, doesn't mean it's NOT safe to talk on.

Safety has nothing to do with it Twistyboy. The point is that it may not be
LEGAL to talk on these bands without proper authorization. "Safe" as
nothing to do with it.

>>Q. What are these other frequencies between 24 and 32 MHz used for? <

>Again, you ask a question for your entertainment only. I decimate them
>for mine.

The "use" is irrelevent. If you are not specifically authorized then it's
illegal. You skipped that part Twistyboy.

>>A. These frequencies are assigned to many different licensed radio
>>services, both in the United States, as well as in other countries.<

>Not all of them, not even the majority of them.

Where's the list TwistyBoy. Do you have a list for every other country in
the world? Even this one? Nope.

>>Authorized users include Maritime and Aeronautical radio stations,
>>standard time and frequency stations, international broadcasting
>>stations, amateur radio, and government stations. A portion of this
>>spectrum is also allocated to radioastronomy, where scientists are
>>attempting to listen to very weak radio signals coming from distant
>>stars and galaxies.<

>Look, stargazer.....the freeband portion of spectrum you speak of that
>actually gets used is incredibly small. We had this debate before and
>you were going to produce some proof from a company, any company, that
>was using a freeband frequency indicated and assigned, that suffered
>from interference due to freebanders. That endeavor died as quick as
>your claims.

OOOH, here's the "proof" card again. It's illegal Twistyboy and that's the
only reason that you SHOULD need.

>>No radio transmitters of any kind are permitted within these
>>radioastronomy bands, so any earth-bound transmitted signals can

>>completely disrupt radioastronomy observations. -A<

>Post the freeband frequencies you feel are threatened by freebanders and
>don't hesitate to cite an incident. Personally, I think your fears are
>on the same level as your expected reply resulting from your search for
>the andromeda creature.

There really are no HF astronomy frequencies but the point that you are
ignoring is that IT'S ILLEGAL TO TRANSMIT THERE.

Actually, Kenneth, I suspect you are just giving a little 'pay back' for some of the really stupid posts which have been hitting the newsgroup for quite a while. Geeze, what's it been, 2 or 3 years since this group was a really good group? As far as the cellphones, they are terrific, as I stated, for very localized emergencies such as a traffic accident. Yep, the cellphone use in vehicles is prohibited in NYS (unless you are using a hands-free unit) - and I can see why. Until you have someone cut in front of you making a left hand turn while talking very animatedly into a cellphone, you won't understand. One can always pull over and use a cellphone (even in New York) with no problem. Some people don't have a problem talking into a phone and driving; others do. I've seen chuckle heads yakking on the cellphone driving in the center of the road - of course, they just wanted their half out of the middle. Until accident reports start including information as to the use of cellphones while driving, we are all guessing as to the actual impact of the things. That said, I live less than 4 miles away from work, so I really don't worry too much about road conditions. For travel, I'll drive a hundred miles or so; after that, I fly.

True, but as I've mentioned before, it is a matter of visibility. You might put a 1 watt FM broadcast station on the air and get away with it; put a moderate amount of power (say 50 or 100 watts) on the FM broadcast band and you will likely not pass go nor collect $200. When the problem starts, it is usually small. As it gets bigger, more people complain; eventually enforcement will follow. Remember the FCC was essentially stripped of all manpower and money for enforcement for many years; what will happen as it gears up remains to be seen. The broadcast industry takes a dim view of folks broadcasting without licenses in the FM broadcast band; similarly, a number of amateurs are also starting to get a bit upset over intrusion into an amateur allocation. It all has to do with the volume of complaints. Eventually, something has to happen.

Here's just a sample. The full allocation list is at:

(http://www.ntia.doc.gov/osmhome/reports/pub9835/Raspchp1.htm)

Since radio astronomy was first officially recognized as a radio
service, several frequency bands have been allocated for the radio
astronomy service.
<snip>
TABLE 1ï¿½1
Frequency Bands Allocated to Radio Astronomy in the United States
<smip>
25550ï¿½25670 kHz Primary. Shared with fixed, maritime mobile, and land
mobile services. (FN: 545, US74)

-Aaron-

PS: Watch "Twist" go to work twisting the facts! My guess is that he
will claim that "radioastronomy" and "radio astronomy" are two
different things! LOL!

Some easier than others. Have you ever seen a mod to get 240 channels
from a TRC-9? If you only talk on three channels, that might be just
the right radio to have.

> I named the rigs above because of their quality.

They are all easiliy modified for more channels and/or more power. Not
a coincidence. I haven't seen a TRC-9 that didn't still work well. Are
you saying that reliability is not a factor of quality? Because if it
is, the Washington and Galaxy should be taken off your list.

>>If all you want to do is talk on
>>the Citizen's Band, just find a radio that works and use it.
>
>I suppose it depends on how serious the *individual* is about their "talking."

If they really are really serious about their comm, maybe they should
get a license so they can use the same bands and modes used by other
people that take their radio communication seriously. Then they will
have some serious bandwidth, some serious DX using some serious
modulation methods, and can mount some serious antennas... Are you
getting it yet? The Citizen's Band isn't a license-free amateur band.

>>It's that
>>simple. That's what the service was intended to be -- simple.
>
>No, it's not that simple. Some would like it to be, but the "Citizen's" Band is
>no longer what the FCC "intended" it to be...and hasn't been for quite some
>time now.

True, and due primarily to all the cheap amps, bad mods and
potty-mouthed punks.

The Citizen's Band was set as a short-range service for business or
personal use. I don't see any reason why "personal use" can't include
CB as a hobby. But for people that don't want just a 'simple' service,
there is the Amateur service, the GMRS, the Commercial services, the
Experimental services, etc.

Simply because all of the arguing started by Aaron and W8 what's his call .. wasn't going on. Sure, there were a few flames, but when I first ran into the group there was a lot less of the above and more discussion of radios, antennas, feedlines, and grounds.

You might gently point out the mess of filtering the hv supply. Full wave, 3 phase supplies don't need much filtering as there is another phase taking over just as soon as one just begins to drop. Not at all like single phase. BTW, I knew a guy back in the 60s who obtained a used tube from WHAM (a 50 KW station here in Rochester, NY) and his girlfriend (a ceramics teacher) built the chimney. I forget what the plate supply voltage was, but the stupid thing IDLED at HALF AN AMP!! I actually got to walk into the fruit cellar where the thing was built and observed it. He heard that Charlie was watching him - and then the power company showed up. Yep, seems a number of houses on the one pole pig had lights blinking. He dismembered the thing and got rid of the evidence.

Again Aaron talking about what he doesn't know.
Neville Chamberlain never said that about Poland.

Source record: 130349

Top posting sucks and now I'm guilty of it too...

Spent the last week and a half on the road. Much of that time was on I-40. Had lots of fun getting into an area with lots of CB traffic for once, didn't come across many jerks, ect ect ect. All I can say is yes police do monitor and utilize the CB bands for communicating with truckers. I think anyone with a CB Mobil, or base near a freeway, knows this from first hand experience. I don't think it would be a stretch of the imagination to assume the police radios fitted into Highway Patrol cars can be operated on any freq they may use officially and on CB. Wouldn't it be as easy as a flip of the switch? Doesn't matter if the units are an all in one or a separate radio, I'm sure the offices involved can afford a VERY nice CB rig. The officers I heard while driving came in loud and clear. Using amps? Don't know, but if they wanted to I'm sure they could get permission. The FCC regs we read everyday aren't the final rule on who can do what, then again even if they can not legally use amps I'm sure *some* would anyway. It's amazing what you can do when you have the ability to communicate. Really pissed off that guy in the Escalade just about ran you and 6 other people off the road? Forget road rage, forget forgiveness, Key up and find an officer on the hunt. Next thing you see is a HP flying down the I-40 lights blazing and a Caddilac Escalade pulled over at the 23 mile mark...

Most annoying thing I came across while traveling was a couple cases of guys using amps and stepping all over everyone's transmissions. It was horrible. Damn guy was nowhere near the area I was in and no one I was able to reach with my piddly 4 Watts was able to talk to the guy either, he was God knows where, probably 10ft from who he wanted to talk to, making communication impossible for those of us who were, in some cases, in sight of each other. Sad to think I was thinking about amps before this trip. I wanted a little boost so I could be heard over the noise and the illegal ops. After fighting to communicate a couple times I've come back full circle to where I was before. 4 Watts is all I will run. I'll leave the amps to the guys who don't care about people like me.

Dave

Not to mention the de-humidifier (depending on
where you live). Or, replacing the insulators on
that 8-10 ga. wire dipole ~regularly~....

I was paraphrasing. But since you seem to know what Neville
Chamberlain didn't say, you must know what he actually DID say. So
post it and enlighten everyone.

Much of the domestic activity is done by truckers. The answer to this
problem for ALL hams to become VERY active in attempting to protect
what we worked for lest we lose it. NOW is the time to strike when
the "iron" is hot, so to speak.

Amateur Radio has received much favorable publicity in the US in the
wake of 9/11, and this is a wonderful stepping stone upon which to
launch a campaign to our Congresspersons. Write your Congressman
explaining what Amateur Radio is (they may already know) its value to
our Nation as a resource, and the problem that is taking place on our
10 AND 12 meter bands. Explain that, due to short funding, FCC has
been much unable to respond to the problem in the measure needed to
curb it.
Suggest ideas that could be used to stop the incursions. Here are a
few:

1) Increase funding to FCC, at least in the short term, to publicize,
mobilize, and
enforce the rules on CB.

2) Increase visits by agents to truck stops and CB shops to locate and
remove such
illegal radios as make these illegal incursions so easy.

3) Get Customs to more closely inspect containers and crates for
illegal
"export" radios
and stop them at the port of entry.

4) Amend the "Local Enforcement" law to allow state and local police
and DOT

officers to inspect, fine, or otherwise punish truckers who have in
their trucks those
radios and amplifiers already on FCC's list of unapproved
equipment.

5) Suggest that, due to more modern technology (cellphones, Family
Radio,
MURS,
etc) that Citizens Band as currently constituted is outdated and
could
be "sunsetted":
IOW, after, say, 5-7 years, a date be set after which 27 MHZ CB
would
no longer
be legal for use in the USA. Suggest combining that with rigid,
even
if temporary,
enforcement, to make sure that 27 MHZ is vacated. Moreover, if
Congress can
be made to see that CB on 27 MHZ is causing more trouble to
nearby
services than
it is worth, then a better case can be made for sunsetting it.
Explain
that, because of
the short-range characteristics of VHF/UHF FM, much of the
illegal
activity (DX,
amplifiers, and interference) would be abated by that
characteristic
alone. Make it
clear that straying onto nearby bands such as remaining Public
Service,
common
carrier, and the 2 meter hams bands would be met with strict
enforcement.

If enough hams write their Congresspeople, then they can be made AWARE
of this problem we are having, whereas if we just sit here and whine
about it, NOTHING will get done. Of course, everything I have
suggested is not viable, but let's get off our duffs and DO something
about it. Send a copy of your letter to Mr. William Tauzin, Chairman
of the House Sub-Committee on Communications. Make Congress aware
that
Amateur Radio is valuable to our public welfare, defense, and recovery
from disasters. AND that we have a problem with people that are trying
to take that space away from us.

In the meantime, here is something else you CAN do:

1) When you are driving the Interstate, listen to 28.085 AM for the
stupid
beeping and
squeaking. If your car happens to have, either multitudes of
ham
antennas, or a big
unusual looking HF antenna like a screwdriver, sometimes the
trucker
will comment
on "the 4 wheeler" with the big antenna, or even call you hoping
you
will answer.
Do NOT reply, and do not get excited. Calmly slow down
gradually and
allow the
truck to pass you while you get his tag number (you may have to
read
it backwards
in your rearview), the name of the company on the door, and the
trailer number as
well as a description. Keep a small tape recorder in the car
and try
to record the
truck's transmissions. Attenuate (if available) the receiver,
back
down on sensiti-
vity, remove the coax, etc to assure you have the correct truck.
Forward this info
to fccham@fcc.gov . A number of trucking companies have already
received
warnings in this very manner. Try to keep the truck from
becoming
suspicious of
your activities. You may want to send a few "CQs" on 28.85.6 if
you
can (rem-
ember, he is on AM and you have to go up about.6 for him to hear
you.
By sud-
denly coming on so strongly, you may elicit comment from him on
which
to record
further evidence.

If we are SERIOUS about combatting this problem, we cannot sit around
on our hands and "hope" 'somebody' does something. WE are supposed to
police our own bands and be pro-active in protecting our bands.
Sitting around whining about the CBers using our bands won't cut it.
Get out there, listen, report, and eventually those criminals will get
the word AND what they deserve.

LATEST NEWS:
(From Real Radio news broadcasts, Yorks, UK).

A Lancaster girl is believed to be the youngest "Ecstasy" victim.
The 10 YEAR OLD girl was playing at a friends house, when she is believed to have swallowed up to FIVE tablets of the drug.

The three people arrested at the house have been released on "Police Bail".

There is no news yet about how she came to take them... was she coaxed, tricked with "try these sweets", or did she just take them without knowing what they were?

And the UK is relaxing drug laws!!!!
I still remember other cases of young ecstasy deaths such as Leah Betts.
I say tighten the laws, tighten the screw and nail the b**t*rds who deal in misery.

Y'all take care of you and yours!

Peter.

OK...

Radio Handbook, 23rd edition, page 20-8, figures 10 & 11.
Radio Handbook, 23rd edition, page 20-7, "Antenna Impedance".
Showing that thickness of the conductor has an effect on bandwidth and
reactance, which affects the SWR, which affects efficiency.

Radio Handbook, 23rd edition, page 20-6, "Antenna Resonance".
It will also have an effect on the resistance of the wire and "radiation
resistance" (including loss resistance), which will affect the efficiency
of the system.

FYI: The UK still has an antenna width rule, any idea why that is
still in place when they removed the supid height and length rules?
Maybe they also believe that width makes a difference.

Regards,

Brainbuster.

Hi Doc.

As it says... illegal HERE in the 80s.
Sometimes I assume that everyone knows where I am. My spelling sometimes gives it away.

We had a few crazy rules:
Max antenna length was 1.5 Metres
Loading was base only
If mounted above 7 Metres from the ground, we had to use low power.

That set of rules led to inteference all over the place from legal CBers.

How about this one:
No transmissions of a frivolous nature.
That seemed to disappear a few years back.

Regards,

Peter.

Oh i agree. But if one were to plan on using a tube like this, hopefully, they would have done some homework on the costs. And building something like this when you live in a townhouse is also not recomended, agreed. As far as neighbor problems that whole thing needs to start at the source. The transmitter. Yea i guess if you get in that radio and spread them coils for max power not knowing that they are part of low pass filtering it may cause problems. I can tell you that my old Yaesu FT-102 sure is clean. No problems with the neighbors and you'd be suprised what kind of output. Now with some of the other radios i've had that are "peaked & clipped" man o man...old Larry next door doesn't like that one...lol. Take care doc.

Agreed, but aren't we getting kinda convoluted? "It's ok for this rig
to be modifiable...but no this one." C'mon, this ain't assault rifles
we're talking about here. Either make 'em ALL unmodifiable, or hunt
down and prosecute the op, NOT the rig. Pretty lame if you ask me. Let
people take responsibility for their own misdeeds...whether it be
operating a transmitter unlawfully OR not enforcing the laws
pertaining to the operation of said transmitter. (It goes both ways.
Taking no action IS a form of action.)

> I named the rigs above because of their quality.

> is, the Washington and Galaxy should be taken off your list.

Really? I personally know folks that own both President (Dated word
here.) and Uniden Washingtons...for many years now, all in fine
operating condition. As for the Galaxy brand, I can attest to one
circa 1986 that served me well for quite some time...however, I
suspect it might not have been made by the same manufacturer that
produces the current line of radios bearing the Galaxy emblem.

> >>If all you want to do is talk on

> people that take their radio communication seriously.

Maybe, but the again, perhaps that's not for everyone. The "Citizen's" Band served as a fine starter pseudo-hobby service for me and eventually led me into AR. That's one individual's experience talking, not supposition about what woulda, coulda, shoulda been. Foe others, VHF AR might be more appropo...or perhaps a Tech "+" ticket? Some don't like that, well too bad...that's the propagation that the band supports. Do it with 12 watts P.E.P. and I just don't see a problem with it. If it's a matter with not following the directive of those in authority, well that's quite another matter. I've even heard some folks say that if you're willing to violate the no DX rule on CB, you must also be willing to rob banks. I think such a moronic analogy speaks for itself.

> Then they will
> have some serious bandwidth, some serious DX using some serious
> modulation methods, and can mount some serious antennas... Are you
> getting it yet?

Agreed.

> The Citizen's Band isn't a license-free amateur band.

Nobody said it was. I find it almost amusing how "threatened" some find the prospect of allowing DX on the CB. A "parallel service." When you consider how many facets of AR there are, how could anybody fee that allowing folks to respond to signals beyon 155.3 mi. constitutes a "parallel" to the ARS is beyond me. One word...petty.

> >>It's that
> >>simple. That's what the service was intended to be -- simple.
> >
> >No, it's not that simple. Some would like it to be, but the "Citizen's" Band is
> >no longer what the FCC "intended" it to be...and hasn't been for quite some
> >time now.
>
> True, and due primarily to all the cheap amps, bad mods and
> potty-mouthed punks.

Now this is just silly. I think this is where this particular discussion ends because I you really believe that the 11-meter "hobbyists" are those with "cheap amps, bad mods and potty-mouths," then you clearly have never met true 11-meter hobbyists. The very folks whose very presence appears to offend some might very well be the ones who share their detractors' objectives, to rid the band of cheap amps, bad mods and potty-mouths.

> The Citizen's Band was set as a short-range service for business or
> personal use. I don't see any reason why "personal use" can't include
> CB as a hobby.

Agreed. Did you know that the FCC actually ok'd "hobby-type" communications for the CB back in 1977?

> But for people that don't want just a 'simple' service,
> there is the Amateur service, the GMRS, the Commercial services, the
> Experimental services, etc.

Agreed wholeheartedly! One does not suffer at the expense of the
other. Quite the opposite. I offer myself as exhibit A.

> a display case that holds my radio past.

It's a little like the case with amplifiers. Yes, you may use your
already purchased radio legally on the 10 meter ham band. But because of
the relative ease in which these radio can be modified for 11 meter
operation, they are being banned from further import until they can be
made to conform to stricter standards. Which I presume will be something
along the lines of removing 11 meter microprocessor code, or tighter PLL
tuning tables.
While nothing they could do, would prevent a determined bootleg tech
from making modifications that would ultimately enable 11 meter
operation, it would not be the neat, easy, "cut and jump" method we
currently have, and the flow of these contraband radios would be reduced
considerably.

Just like, thanks to illegal CB use, a ham cannot legally purchase an
amplifier with 10 meters already enabled, without showing proof of
license, hams will once again have to deal with the consequences of
illegals using ham gear to further their activities. If this means less
selection of equipment for 10 meters, then so be it.

>did...

Alright, let's play this game: None of the components have an equal
chance of failure. Therefore, some component must have the highest
chance of failure while another component must have the lowest chance.
If a component is added that has a low chance of failure, but by it's
addition decreases the chance of failure of the component with the
highest chance, then you have decreased the chance of failure of the
circuit.

Maybe if I explain it in terms you can understand: If you know which
link is the weakest link, adding a strong link to support it will
strengthen the chain. Could you understand that?

>we're talking about here.

No, we are talking how easy it is to modify certian radios for illegal operation. Do you really think that there is no relationship between the popularity of certain radios and their ease of modification? If not, post a list of the most popular radios and a list of the radios that are most easily modified for more channels/power. We will all compare the lists. Fair enough?

> Either make 'em ALL unmodifiable, or hunt
>down and prosecute the op, NOT the rig. Pretty lame if you ask me.

Pretty lame if you ask me, too, but I'm not the one that said it -- you were.

> Let
>*people* take responsibility for their own misdeeds...whether it be

Good idea. We'll just drop all the speed limits and allow drunk driving, and when one of those drivers kills somebody else only THEN will we prosecute them. After all, just because a person is driving drunk doesn't mean he's going to kill somebody every time, right? Great idea, Bert!

You misunderstood: I was saying that the band is no longer what the
FCC intended because of the people that have trashed it. I happen to
be a CB hobbyist myself, but I don't use amps, I don't harrass other
CBers, I don't curse on the air, I don't splatter my signal across the
band, etc.

And I am a CBer, not an "11-meter hobbyist".

> The very
>folks whose very presence appears to offend some might very well be

>reactance,

Yes it does, but by how much? Since you have a copy of the handbook
handy, why don't you apply it to show the differences in bandwidth and
reactance between 22 and 16 AWG?

> which affects the SWR,

By how much? To the point that it can't be adjusted?

> which affects efficiency.

SWR only affects efficiency if it can't be adjusted to the same value
for both antennas. You are trying to connect the dots without drawing
any lines.

> Radio Handbook, 23rd edition, page 20-6, "Antenna Resonance".
>It will also have an effect on the resistance of the wire and "radiation
>resistance" (including loss resistance), which will affect the efficiency
>of the system.

By how much? I took apart a helical recently that had about 30 feet of
#16 wire. Let's just assume for a minute that it was #22, ok? Now if
#22 has 16.5 ohm per 1000 feet, then 30 feet would be about 0.5 ohms,
which means that antenna will drop, at the most, 1% of the power due
to wire resistance. Now we know that if we use thicker wire in the
helical, or even a straight wire thicker than #22, the best efficiency
gain we could possibly get would be a whopping 1%!

Now lets compare polarity differences. Just as a simple example, let's say that a helical antenna is wound with a pitch that puts the radiating part of the wire at 45 degrees to the ground plane. That means the polarity of the signal is going to be 45 degrees as well (actually a horrid mix of 45 degrees from the facing side and 135 degrees from the far side, and that is just an over-simplified version of the helical geometry involved here). In the end, the vector total is going to be 50% vertical with the rest dissipated as garbage (a whole bunch of little horizontally polarized signals coming from a vertical radiator). And 50% compares favorably with actual field strength measurements comparing a helical to an unloaded straight-wire vertical, which really isn't bad when you consider that the helical antennas are physically shorter, partially loaded, and many of the windings are nearly horizontal.

So which do you think is more significant, brain: 1% due to wire size, or 50% due to helical design?

>FYI: The UK still has an antenna width rule, any idea why that is
>still in place when they removed the supid height and length rules?
>Maybe they also believe that width makes a difference.

Maybe you can research your implication and see if it has anything to do with this discussion. Also, why don't you research the importance of the dielectric material surrounding a radiator. And if you get some free time, go soak your head a while.

True. But many police departments (especially state troopers) have CB rigs in their cruisers. Whether they talk to the truckers or not is up to the policymakers for the particular state. Some only communicate in an emergency.

And twisty will once again claim victory because he, once again, caused his opponent, out of sheer frustration, to throw in the towel. Try as you might to set the record straight, he will continue to hold on to the twisted meanings that he, himself, have concocted, and continue to call you a liar for not verifying his convoluted definitions of something that you never even said. All the while refusing to offer up any substantiating claims to back up his own (however warped) viewpoint.

This is why I will no longer engage in a direct confrontation with him (Unless, of course, it's to take a few shots at the punch clown). It just wastes bandwidth. I still haven't decided if he does this in a cold, calculating manner, designed to just frustrate people (AKA a Troll), or that he really is as warped and sociopathic as he comes off. Try as he might to claim differently, his mannerisms and thinking style is strangely reminiscent of a typical whiney, disenfranchised 20-something, who really needs a 4 year stint in the military to make a real man out of him. I picture him sitting there in front of his web-TV, tongue pierced, with a multiplicity of tatoos depicting God only knows what, with spikey hair, holding up his thumb and pinky yelling "DUDE!". I know very few mature adults who advocate selectively ignoring laws, and who cannot understand and accept why there are laws in a civilized society to begin with. Embracing anarchy is what clueless teenagers do. It's time that twisty grows up.

With age comes experience. Experience leads to maturity, and maturity leads to wisdom. Twisty has demonstrated none of these traits, and debates with the electronic equivilent of "I know you are but what am I" logic.

I don't know if his parents didn't discipline him properly (Lucky for us he didn't shoot up his high school), has a substance abuse problem, or is just a few fries short of a happy meal upstairs. Whatever the case, mature, intelligent people should not lower their standards to people like twisty. Let him live in his own world. We know better.

Just another stupid "What If", but the rules are not the same for everyone.
The police, FBI, ect, can go before a judge and receive permission to wire
tap. Is it a stretch to believe any agency of the government could ask
permission to violate a regulation or law "for the greater good"? It happens
believe it or not. Although you are probably right, there is no *need* for
HP to be using amps and they would be hard pressed to prove a need,
therefore they would never get permission to do it.

Yeah, I know. My grandfather once told me that there are three kinds of
people in the world. Those who learn by listening, those who learn by
watching and those who learn by pissing on the electric fense for
themselves. Sometimes I tend to be the latter. BTW - have you seen those
"Kung Fu Hamsters?" Those things are a riot!

1353. Re: Kevin Muenzler, WB5RUE claims 27 radio busts this year alone,...

Newsgroup: rec.radio.cb
Date: 2002-07-16 15:06:47 UTC
From: twistedhed@webtv.net
Message-ID: <22855-3D343687-427@storefull-2316.public.lawson.webtv.net>
Source record: 130383

Muenzler, unable to produce any credibility regarding his ability to play airwave cop concerning his claim of assisting with getting 27 radio rule violators into federal court since December 27, finally admitted he has nothing to show with:
>Your twisting is hopeless and has taken this thread WAY out of the way. <

Actuallt, YOU took it WAY out of the way by not merely producing any proof concerning your claim about assisting in bringing about 27 radio rule breakers to court since the 27th of last December. I would have been content keeping that as the only subject, but you ran for the hills and began attacking me anyway you could, jumping from topic to topic, but I guess being caught in such lies made you irrational.

>Have fun with someone else for a while. <

I have fun every day. Actually, I think you are impartial to the number 27.

>You may also claim victory if you wish because I give up. <

This was never a win/lose type scenario to me, Kev 'ol chap! Only your ilk think like that. I just wanted for you to provide some info concerning your claim. You really need to come up with some original material...I told you last week you may claim a victory since this is a win/lose type scenario to me, but since you returned my own offer, ok, I'll take the "victory" and continue to tag you as a liar from here on.

>But one more/last thing. I never said that 27 were IN court. I said that 27 were either on their way TO court, IN court or through court and didn't specify how many of each. <

Oh, you mean it makes a difference?
Ok, then show us something that backs THAT up.

>Twist away Twistyboy because I'm done with you.
Kevin, WB5RUE<

You were done when you couldn't produce proof of your claims around 150 posts back in the thread.
But I will give you a few things wrapped in one you said you never said.....verbatim:

>No I'm not going to give you names, that's illegal. <

No, Muenzler, it isn't illegal. Ignoring this "request" you claim came from a judge is not illegal. If he wanted it quiet, he would have gagged it.

Besides, it never happened.
And we also have this little piece..remember you once again DENIED saying you first mentioned money? Wa La:
>But if you want to spend the money you can look them up yourself.<

Gee, you don't want to spend the money, You want something for free. You want something for nothing. You want someone else to do the work for you, and for free at that...to prove something never happened? That's rich. I know there are not 27 cases brought against radio rule breakers by the ARRL in the Texas federal court system. You know it and so does the ARRL.

>Most are being prosecuted at the Fifth Circuit in San Antonio or Dallas. <

Only they never heard of any of your so-called current cases, let alone all 27, that you claim you helped get there.
The info jacket would read, "FCC vs. "???", only there are no individual cases being prosecuted at this time where you claim.
One more question, and I swear I'll drop it.
Do you think anyone else belives this? Like, say, another hammie? Dave Hall has taken a liking to you, but I think it's so you don't muff up the ARRL's rep anymore than you already have.

Kevin, WB5RUE<

Yea, ask Hall if he believes your claims concerning all 27 caught up in the federal court system in Texas. Matter of fact, ask any hammie that posts their call if you;re believed.
Don't take it personal, junior.

well,it reaches a point sometimes where all the bullshit gets so deep,somebodies gotta push some of it out of the way. would the f.c.c. like to see these radios go away? the answer is yes. could they make them "go away",if they wanted to...the answer is "mostly," a few would undoubtedly sneak through. if riley,and all the wannabe "j edgar hoovers" and "elliot ness" types wanted to, it would be fairly easy.every thing that arrives off ship,must pass through customs. these rigs are no exception. the shipping containers are clearly marked. their point of origin is clearly marked.(china and malaysia) the manufacturers name and type of equipment is clearly marked on the containers. ive stated this before over the last couple of years....but i guess it bears repeating. our state dept and departments of commerce and customs are not interested in stopping the trade in electronic devices from these countries. we are "helping out " the economies of our neighbors by allowing this free trade to continue and flourish. you may not like this.....but its politics....so...rant and rave about it all you want. those rigs will still arrive daily,fresh from the orient...to the delight of freebanders everywhere. "damn that gunslinger,sure wish he would shut up" :) :) gunslinger

This is a bit misleading, but I think I know how you arrived at that. The tape recording made is only enough to gain some interest in the case. It is not evidence and can not be entered as such, one reason being, among many, is you can be lying about the frequency you made the recording on. Yes, trucking companies have been busted, but the feds need to catch 'em first, not the wanna-be-Muenzlers.

Nice tube,

It will provide almost 20 dB gain in conventional HF circuits. Many hams (and a lot of CB'ers) use this tube and similar types. Often refered to as a "tube with handles."

The open bid amount is a great price... One must have the proper hardware, blowers, socket and power supplies in place. Construction of an amplifier this size takes the builder into a whole new ball park. Operation of said is a whole different topic...

ICAS SSB operation is possible from single phase 220 mains.

Less than a few hundred watts drive will give you "full-tilt."

This and similar size/type tubes are popular in broadcast transmitters. Many people have converted surplus transmitters over to 160 meter AM operation, others have used the parts to build (or rebuild) an amplifier.

More people than you would imagine operate using this or similar tubes in their amplifier cabinets. Legal limit operation is a breeze... and very loud.

It would be smart money to look at the problem signal with test equipment
to determine why the signal trash... a simple receiver could be used for
said tests.

A low pass filter might be more practical... a better choice.

Once the horse is out the door, he's hard to restrain... but getting a
handle on him before the door is open is a better idea and much less work.

Kev, you want to read that one more time. The band 25.5 MHz-25.67 MHz is
reserved. It is no longer secondary to anything (never really was, it was
assigned to a service with the good sense to shut up until Radio Astronomy
became a legal 'Service' in its own right).

If you feel that improving the reliability of your design is
unnecessary, then by all means you are correct. In that case, I
recommend you should do a little research into the practice of
"engineered obsolescense". There you will find a goldmine of marketing
tricks, gimmicks and scams that are right up your alley, and you can
apply them to your Skywave amplifiers. Good luck.

I see them on the program "Cops" asking truckers to hem in cars trying to
run away. So, some troopers DO have CB radios. Around here (I think) it is
up to
the individual cop if he wants to buy and install a CB in his cruiser
because I see
some with CB antennas, others without.

The wiretaps are obtained because there are laws explicitly authorizing
wiretaps if certain procedures are followed. They are NOT violating any
regulation or law.

"Greater good" is generally not a valid argument in court. Look at all
the cases that are thrown out of court because the judge decides that some
crucial evidence was "illegally obtained". This happens even if it is very
obvious that the person is guilty - and that it would be very much to the
"greater good" if the person were convicted and locked up.

What fantasy world? I'm not saying freebanders are Nazis, I'm saying they REMIND me of the Nazis. Someone correct me if I've got a few nonessential details wrong, but I believe the essence of the story is accurate: Hitler said Germany needed "elbow room" and so they just marched into Austria and took some real estate they figured no one was using. Great Britain got all upset, Neville C. had a talk with Hitler and Hitler basically told him "no one gives a rats ass about this, why should you?". Hitler promised him there'd be no more expansion, i.e. the Germans were done expanding. Neville figured that it was none of the British business and why not let the Germans keep the real estate they stole? Next thing ya know, the Nazis are marching into Solavakia and Poland. Hitler made some excuse again, I forget what it was, something like "It looked abandoned to us. If no one's using it, why can't we?". After that the Nazis just kept taking over countries until the Allies got together to put a stop to the shenanigans.

Can we draw any parallels to freebanders? Sure. They took over the space above the legal 23. Then when they were granted that space by FCC rule so they took over the space above the legal 40. Now they are in the 10 and 12 meter ham bands. And the excuses they use to justify this crap sound quite similar to the ones the Nazis used. Again, I'm not saying freebanders are Nazis, just common criminals. And criminals will tend to keep pushing the limits - until they are pushed back on.

1381. Q re. Debco DF-1005 Direction Finder

Newsgroup: rec.radio.cb
Date: 2002-07-17 00:41:36 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10207161834060.34822-100000@srv1.calcna.ab.ca>
Source record: 130411
Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb,alt.radio.scanner

I have some questions about this item. Have other users of this newsgroup assembled and used this instrument? The Debco web site said that the DF-1005 Carrier Phase Radio Direction Finder operates in the HF to 1 GHZ range. What specific frequencies are covered, and are there any gaps (e.g. cell phone bands)? What are the step sizes or increments in each band covered? Can I use this instrument to home in on 43-49 MHz cordless phones? Some sample frequencies are 46.610, 43.970, and 44.460 MHz. Does this device connect to a scanner, or does it incorporate its own radio receiver? Do you dial in a specific frequency and then the DF-1005 tells you where to travel to get to the transmitter on that frequency (if any)? Can you find CB transmitters using this device? Assuming that your target receiver is transmitting audio, do you hear the audio being transmitted at the same time that you DF (fox hunt) the transmitter?

Note: I live in an area where it is legal to monitor cordless and cell phones, as long as other conditions are met.

Regards,

Ian Douglas

Reality check for all. Look at our President. Yep, he sure wants to push for some legislation over the corporate 'crime'. His hands, however, are not clean. Clinton was using the Oval Office for fun and games. Then, speaking of the Clintons, there was Whitewater. Frankly, big business spends money; as a result, we have the best government money can buy. Anything hurting big business is, at least as far as our leaders dare push the issue, squashed. Son of a gun, a post actually got to me!

>the popularity of certain radios and their ease of modification? If
>not, post a list of the most popular radios and a list of the radios
>that are most easily modified for more channels/power. We will all
>compare the lists. Fair enough?

Ok, fair enough. At the very TOP of the list is...

1. The FT-757GX - Open a access panel and flip one stinking microswitch.
Doesn't get much easier than that!

2. Next, the FT-757GX II - Oh, same mod.

3. How about the FT-767GX? - Uh oh, that's the same mod too.

4. Let go contemporary, the FT-840 - Open case, grounf TP and press a sequence
of front panel buttons to enable full transmit. Heck, at least they made us
open the cover.

5. Cobra 148FGTL DX+/Connex 4800DX(L) - Open cover, move jumper. Not as easy as
the switch, but easy enough.

6. HR-2510/President Lincoln - Open cover, disable diode(s), and solder jumper.
Uh oh, gotta break out the soldering iron. Method II - Chipswitch; the name
says it all...keep that soldering iron hot!

7. AR-3500 - Open cover, disable diode(s), and solder jumper.

8. Superstar 3900 - Basic EPT3600 board, keep the dikes and soldering iron out.

9. Uniden Grant/Classic Cobra 148 GTL - Dikes and soldering iron please.

10. RCI-2950 - I couldn't even guess as I've avoided this rig like the plague.

Now, I didn't go through the time or effort to research these mods. However, my
memory serves me sufficiently that I'm confident that I'm pretty darn
close...if not bullseye. There's your list. I extended you the courtesy of not
researching the Kenwood mods as their line might not have left room on the top
ten for the "10-meter" rigs.

>> Let
>>*people* take responsibility for their own misdeeds...whether it be
>>operating a transmitter unlawfully OR not enforcing the laws
>>pertaining to the operation of said transmitter. (It goes both ways.
>>Taking no action IS a form of action.)
>
>Good idea.

No, GREAT idea! It means more enforcement.

>We'll just drop all the speed limits and allow drunk
>driving, and when one of those drivers kills somebody else only THEN
>will we prosecute them. After all, just because a person is driving
>drunk doesn't mean he's going to kill somebody every time, right?

I don't really know where this is coming from, it was not the meaning of my words. Stepped up enforcement wsa.

>Great idea, Bert!

Damn straight!

>And some people still drive Ford Pintos and Chevy Chevettes. What's
>your point?

That the manufacturers I named do make good quality rigs, as well as reliable ones. Particularly Uniden.

>Actually, I don't either. I understand that rule is going to be lifted
>when the international stuff gets revamped.

Unfortunately, I doubt it. The ITU treaty will likely go away...but I'll bet dollars to donuts that the 155.3 mi. limit remains intact.

>You didn't hear it from me. I understand that disregard for the law
>can be of varying degrees of seriousness. And I have NEVER equated
>illegal operation with violence, so don't even suggest that I did.

Agreed, it was a generic statement and not directed at you.

>When did this conversation become one about DX? I thought it was about
>the popularity of modifiable radios. Why do you want to make this a
>crusade against DX hardliners?

Fair enough. I suppose it was the "If they really are really serious about their comm, maybe they should get a license" thing. I hear it allot when folks try to shoot down the idea of removing the 155.3 mi. limit. If this was not your intended analogy, please accept my humble apology. I was in error. :-)

>You misunderstood: I was saying that the band is no longer what the
>FCC intended because of the people that have trashed it. I happen to
>be a CB hobbyist myself, but I don't use amps, I don't harrass other
>CBers, I don't curse on the air, I don't splatter my signal across the
>band, etc.
>
>And I am a CBer, not an "11-meter hobbyist".

Cool, me too...but I AM a CBer AND an "11-meter hobbyist."

>So you are saying that in order to clean up the band we should be
>kissing their asses? You sure have a different perspective on things,
>Bert.

Certyainly not kissing their asses, but not "dissing" them all either. Not specifically meant for you, BTW.

Any?? Find the mod for the Ten-Tec 701 Jupiter which is by far the best rig in its class and very possibly the best buy in the biz today.

But this has been true virtually forever and still we sell crap with channelization, roger beeps, and Ancient Modulation. You're the resident genius pro tem, why might that be??

But when you buy a real radio might it not be time for real radio??

Does anyone know the modulation mod for this radio. I read some where
that all I would have to do is cut R 247. I am not really interested
in everything that this radio will do. How ever the modulation
limitors that they put in new radios today truly suck. Every radio
that I took the limiting diode, transistor, and resitor or what ever
they use to limit modulation truly sound good. So when I get this new
radio on the air I want it to sound good. I have a D-104 silver eagle
that I'm going to add to the radio. So after the modulation mod this
thing will probly rock on.

Oris, it is like this. Limiters do not limit modulation because that is
limited by the laws of physics. They limit crap. In addition, they will,
if left alone, raise your effective talk power so cutting it will not help
a blessed thing.

With all due respect would you recognize good audio if you heard it?

"Freebanders Promise" Tile Coaster

All AKCers will enjoy this satiric jab at pirate ops: Neville
Chamberlain holding treaty containing freebanders promise that they
will not go above 28 mHz!

Ceramic tile coaster is 1/6 inch thick. Felt pads protect your tables
and countertops. Dishwasher safe.

$5.50 each

See it at....

It doesn't matter, he's trying to justify
his so called existence here. Again, he equates
free-banders to Nazi's as did someone else to
terrorist. Last time I checked, free-banders didn't
kill thousands, upon millions of people.

Dick, you missed a good post in another group. Someone bought some FRS radios and then got rid of 'em. The new ones aren't nearly as loud, but the audio is good. The other two he bought (and got rid of) were so much LOUDER, but distorted. Hmmm ... care to bet someone turned the deviation way up on it? Yepper, even though the discussion is about am modulation and I mentioned fm, I have a feeling you just might be on to something ... there really isn't any 'free lunch'. If it sounds too good to be true ...

Frank, grasping for straws now, boy,
I sure hope that nobody's taking an
evening stroll down your street, you
are liable to jump out from behind the bush
and start yelling my name at them.

The Landshark

Oh, by the way, please report my Sig. file,
I'm sure they would love that.

--
Roast Prime Rib of Beef

freshly ground black pepper to taste
1 tablespoon dark soy sauce
1 1/2 tablespoons Kitchen Bouquet
1 tablespoon dry mustard (Colman's is best, not as hot)
1 8-9 lb beef rib roast, bone in
1 cup peeled and SLICED (1/8" thick) yellow onion

Rub the seasonings on the roast in the order listed. Pack the
sliced onion on the roast. Place the roast on a rack in a roasting
pan. Roast in a preheated 450F oven for 20 minutes. Reduce the
oven temperature to 325F and roast 1 hour more. Reduce the oven
again to 300F and roast about one hour more or until the beef
registers 115F for rare in the center when tested with a meat
thermometer. Remove from the oven and allow to stand 15 minutes
in a warm place. Slice and serve immediately with Wine Sauce for
Beef and Horseradish Sauce (below).

Wine Sauce for Beef

2 1/2 cups homemade Beef Stock
1/2 cup dry red wine
Salt to taste

Bring the beef stock and wine to a boil in a small saucepan.
Simmer, uncovered, until reduced to 2 cups. Add any pan drippings
from the rib roast to the sauce. Strain the sauce and skim off as
much fat as possible. Add salt to taste. Serve with the rib roast.

Horseradish Sauce

1/4 cup prepared horseradish
1/4 cup sour cream
1/4 cup mayonnaise

In a bowl, combine all ingredients. Chill and serve with the beef.

This is wonderful with Yorkshire pudding and creamed onions, a
salad and rolls.

It was a poor application of your idea. I do agree with you to a
point, like the phrase, "guns don't kill people, people kill people".
(And lets not start a flame war on gun control!) But let's take some
other examples. Like explosives. I'm not talking about people using
them for bombs, but what about just storage? Do you think that people
should have the right to store explosives, and prosecute the
irresponsible person only AFTER the barn goes ka-blewie? How about
hazardous chemicals? Some of them have legitimate uses, even as a
hobby (electroplating uses cyanide salts, for example). Are we to just
allow people to use them and only prosecute those that use them
irresponsibly? Or would it be better to regulate this extremely

poisonous substance before it is offered at the supermarket or sold at
garage sales?

>>Great idea, Bert!
>
>Damn straight!

I don't think so. Like I have said before, a radio is a very powerful
tool. Radios are used to save lives every day and in more ways than
you could probably count. And radio can be used to cause harm: at
least one country was overthrown just because of the power of radio.
Operating such a powerful tool requires just as much responsibility as
using any other potentially hazardous device or substance. And just
like those other devices and substances, radio is regulated. Just
because some people are ignorant as to the reasons for that regulation
and operate illegally and irresponsibly doesn't negate the potential
hazards.

>>And some people still drive Ford Pintos and Chevy Chevettes. What's
>>your point?
>
>That the manufacturers I named do make good quality rigs, as well as reliable
>ones. Particularly Uniden.

Uniden used to make some good quality stuff like the PC-122, but
lately their quality has been a bit lax, IMO.

>>Actually, I don't either. I understand that rule is going to be lifted
>>when the international stuff gets revamped.

Not the first time he has had a pop at Jerry. Last one I saw seemed
to be because Jerry was not abusive enough, he did not set out to
offend people.
Speaking out against things, telling people they do not need amps, or
running a legal setup yourself is not enough for Aaron... you have to
offend people on a regular basis before he removes you from his list
of "keyclown" targets.

I have seriously come to the conclusion that Aaron and his gang are
just here for troll value, they just want excuses to argue, abuse and
offend.

Regards,

Brainbuster.

==

True... and the shops that sell cigarettes, fireworks and lighter fuel to children.

But we are talking of something rather different here.
Last year, a few doors from where I now live, a father arrived home to find his 15 year ols girl unconscious. She DIED from sniffing lighter fuel. A few years back, another child on the next street died the same way.
The police still cannot find who ILLEGALLY sold fuel to children... but the local store trader seems to have been "run out of town" for that one.

Every year, children get killed and seriously injured by fireworks... and fireworks get "posted" through doors in the UK.
And, have you seen the death rates attributed to cigarettes. Most smokers start as children and some traders will sell to children in uniform, on their way to school.

How many die as a result of illegal CB?

Children suffer for the rest of their life as a result of what they are put through by perverts trading in the pictures and films.
As much as I dislike what Lou F. has done to CB, It really does not compare wilth what is done to children.

Regards,

Brainbuster.

1420. Off topic? CB Radios?

Newsgroup: rec.radio.cb
Date: 2002-07-17 08:29:08 UTC
From: dgose@webtv.net
Message-ID: <4046-3D352AD4-3@storefull-2215.public.lawson.webtv.net>
Source record: 130449

Hello,

I don't mean to be rude, so humor me, ok? Does this group actually ever just discuss CB Radios without getting into 50 arguments about how it's probably illegal? Like.. if you're running a Wilson.. you're running power.. I have seen similar statements... when someone asks a simple question.

There are endless strings of posts arguing about things, but most of the time when a legitimate question is asked, it get's quickly buried because of all the arguing! When I asked questions on here, for every legitimate answer, I got at least one or two smart alec ones (sometimes even emailed to me!)

I truly enjoy my CB. I have played CB for over 20 years and hopefully will til the day I die. I believe CB Radio fills a niche that will never be filled by something else. It's still that "neighbor across the back fence" sorta thing. I am disabled now, and I spend a lot of time on the radio talking, and have made many new friends, young and old on the radio. My CB has brought me help when broken down, has let me get help for others... and give directions to truckers. I can talk to friends in the next county without long distance charges. Do I run illegal equipment? No.. I just recently sold my old Realistic Navaho and bought a box stock older President Madison with Sideband, even use a stock handmic. My base antenna is an Antron, and in my car, I run a, once again, box stock Cobra 148 hooked to a Wilson 1000. Why? I liked the way the Wilson gets out, and the combination works well for me on sideband.

I started reading this group hoping for general conversation about CB's, and maybe helping some of the newer fella's with what I knew... guess that doesn't happen much here.. too busy arguing..

Do you know of any discussion groups that are more "CB Friendly" instead of just Ham's putting down CB'ers or is it a lost hope? By the way, I have nothing against Ham Radio's or the people who play them, I just happen to love my ol CB.

Thanks for listening, and God Bless...

I agree with regulation, but certainly not overkill. Putting a Uniden HR-2510 that covers the entire 10m band in all modes on the "illegal list" is certainly overkill when a FT-840 can be modified more easily for extended coverage. Now a Galaxy or Connex that covers only the top 315 KHz of the 10m band in AM/FM only? Quite another story. Like I said, both sides of our discussion have validity.

>Uniden used to make some good quality stuff like the PC-122, but
>lately their quality has been a bit lax, IMO.

I replaced my niece's PC-122 with a TRC-485. I have to say that the receive on the Grant's pretty tough to beat. I judge radios on their receive sections, since all transmitters s/b 12 watts antway.

>>>Actually, I don't either. I understand that rule is going to be lifted

>Appreciation Day rolls around.

I hear you, but if someone tells you that they're an 11-meter hobbyist, don't immediately read him the Part 95 riot act either. I truly don't see a problem with someone who works DX on the legal 40 at legal power levels. That said, I generally like to lead with "Like that? Lemme show you what you can do with 100 watts on 10 or 15." rather than "You're a criminal or keyclown." I find that it gets much better results in the real world. (Again, not directed specifically at you.)

Well, I think it is beginning to prove two things:

1) Loud = Good to far too many people. That limiters are used to BE loud never dawns.

2) A lot of bozos react to the word 'limiter' like Dracula to a garlicwood cross. AM, FM, who the hell knows, makes not a bit of diff. Listen to Brainbuster, the Brits with FM on CB have almost exactly the limiter clipping folklore we do.

>happen to love my ol CB.
>
>Thanks for listening, and God Bless...

You are not the first to express those feelings. I started in this
newsgroup a while back with the same intentions you have. But at that

time any talk of legal operation was met with smart-assed and degrading remarks, constant harassment to get me to buy an amp or modified radio, and even some email offers by people trying to sell the same. The fact is that if you wanted to talk about legitimate CB related topics you would get flamed right out of the newsgroup. The illegal operators had turned rec.radio.cb into a communication hub for freebanding and amplifier discussions and sales.

But a few of us didn't get chased off. Those of us that chose to tough it out have been harassed, threatened, stalked, forged, and accused of everything under the sun -- including child molestation -- in their attempts to intimidate us. The profanity was worse than anything on Usenet, and some major ISPs dropped rec.radio.cb just because of all the abuse. It was nothing short of a nuclear flame-war.

Now what you are witnessing in this newsgroup is the last of the hard-core illegals hanging on by their fingernails. The profanity is almost nonexistent, the spamming is a small fraction of what it was at it's peak, and a conversation about CB radio -- even LEGAL CB radio -- can actually occur without excessive noise from the antisocials. But just like anything else in life, this newsgroup is only what people make out of it. You can help shape it into a decent newsgroup by hanging around and making positive contributions. Walk away and you are giving a green light for the bad elements to return.

BTW, I would much like to see more talk about the communication side of CB radio. This is something that has been ignored in favor of 'swang', 'bird watts' and 'channel mods'. From your post I gather that communication is your primary purpose for using a CB, and I think your contributions might be a welcome change of pace around here, at least by me. Please think about it before you write the group off completely.

My point was that all the radios you listed are much, MUCH easier to
modify for hundreds of channels than, say, the TRC-9. Yes, that is an
extreme example. But there are many certificated CB radios on the
market that are very difficult to mod for channels because of the PLL,
or the tight VCO range, etc. So it is certainly possible to make a
quality legal-40 radio without making it easy to mod. And I think that
was the point of regulating these psuedo-CB/10m "exports".

No doubt. There are too many radios that have terrible channel
seperation. Sensitivity is usually pretty good on most, but some of
the noise-blankers are useless. It would be easier just to put a tone
control on the output -- a parametric EQ would be even better cause
you can null as well as peak. These are simple circuits, it's too band
they are not used where they are desperately needed.

Actually, I don't want to see the HF amateur bands lose the code
requirement. I guess it doesn't matter tho, because I am going to get
the license anyway and I plan to do CW almost exclusively. With a

Q-multiplier I can get a signal narrowed down to less than 10 Hz, and
if that doesn't cut through a pileup then I'll just quit ;-)

>watts on 10 or 15." rather than "You're a criminal or keyclown." I find that it
>gets much better results in the real world. (Again, not directed specifically
>at you.)

That's your style, not mine. It doesn't impress me when someone says
they are an '11-meter hobbyist' when it is just a euphamism for the
sometimes derogatory term 'CBer'. But I feel that the term '11-meters'
implies the CB plus other nearby freqs that are illegal. It also
implies that the CB is a license-free amateur band, which it is not.
That is why I make the distinction. I don't care if anybody agrees
with me, just as long as they understand what I am saying and why.

And like I said before, I don't have a problem with DX on the CB. I
believe the restriction was a cold-war security precaution, but that
war is long gone and I don't understand why the restriction still
exists. Regardless, while it exists I won't ignore it. In fact, if it
continues after the treaty is tossed, I will probably help any group
that tries to get the restriction removed (using legal methods, of
course).

Unfortunately, there are a certain percentage of "contributers" on here that, for some reason, cannot differentiate discussions about antennas, feedline losses, grounding, and general performance enhancements, without having to include all sorts of illegal modifications, which usually sets the stage for the digression of the thread into a flame war over what's legal and who-has-what-right-to-do-what-whenever.

> back fence" sorta thing.

25 years ago, I would have agreed with you. Today, it's tough to find an area where people just get on and TALK to each other in an easy going, carefree manner, without roving bands of juvenille foul-mouths jamming QSO's, and people with low self esteem, attempting to boost their own social status, by becoming the "channel master". While others cannot truly be satisfied until they've spend every available dollar of their disposable income (And what determines what part of their income is truly "disposable" has led to many marital disputes) on gadgets, amplifiers, noise toys, endless radio mods, and every high tech accessory known to the CB world, just so they can "impress" everyone else on the band, ad-nauseum. They have little of substance to contribute so they instead try to "dazzle" the rest of us with their toys (Which, for reasons unknown to them, have the opposite effect). Then there are the "competition" types. Whether it's the loudest signal, the most watts, or the most DX, these guys let nothing stand in their way of their holy grail. Your carefree little conversations mean nothing to them. You're just a speedbump in the highway to their ultimate goal.

The bottom line is that there are a great many "users" of the 11 meter band who care nothing for the rights of others, and whether incidentally or deliberately, have ruined, and are ruining, the fun of many other people who, like you, just want an outlet to chat with other people, while enjoying a little courtesy and consideration for what is their

hobby as well.

The arguments that you witness on this newsgroup, are borne from the frustration that legal operators are feeling as their once fun hobby is being trashed right in front of them. It gets a little sickening to watch the same people responsible for much of the problem, promoting this stuff as if it was perfectly fine, seemingly unaware or indifferent to the situation that they've created. Many even claim that "Illegal operation doesn't hurt anyone", and that it's a "victimless" crime, compared to things like jaywalking and speeding. I guess ignorance truly is bliss in their case.

> I am disabled now, and I spend a lot of time
> on the radio talking, and have made many new friends, young and old on
> the radio. My CB has brought me help when broken down, has let me get
> help for others... and give directions to truckers. I can talk to
> friends in the next county without long distance charges.

That's getting harder to do, with the band being awash with bleedover from some local yahoo running a screwdrivered splatterbox, feeding a class C amplifier, busily attempting to outgun another local yahoo with a similar setup. Then to have your conversation interrupted by another jerk that can't say one sentence without some foul word in it.

There are many that have stated that it's not that way all over, and that's probably true. I've found that in areas with a lot of activity, there are the most malcontents and illegals. Other areas, you can spin the dial and not hear anyone. It's hard to find that balance of activity without the idiot factor.

> Do I run

That's great. Your setup is perfectly fine. I have radios dating back to 1965 that I run when I feel nostalgic. I have stuff from the 70's, 80's and 90's. It's all part of the fun.

>
> I started reading this group hoping for general conversation about CB's,
> and maybe helping some of the newer fella's with what I knew... guess
> that doesn't happen much here.. too busy arguing..

It's really a shame, but as others have pointed out, many of the guys who make it their business selling illegal equipment and providing illegal modifications, are starting to feel the heat, and do not like the exposure that their presense has provided. Many have left rather than risk USENET battles, bringing the eyes of the FCC on to their activities. Hopefully, if the main topics of conversation can be things

other than a "How-To" of illegal mods and amps, the level of civility will improve. There are many topics that are common to all CBers; Antennas, TVI problems, Improving station efficiency, etc. And there are PEOPLE topics; colorful stories about interesting and memorable people that have made the CB experience that much more fun. I know I have a few.

I guess it's up to us to set the example.

Radio Shack tried that with their HTX-100. It was a CW and USB only ten meter rig which, ironically, COULD be opened up for 11 meter frequency coverage. Because of the absense of CB-popular modes, that radio was never a top seller in the illegal radio market. Unfortunately, it didn't have much of a following in the legal 10 meter market either, so it was discontinued.

The irony here is that many hams like AM and FM, and would use those modes on 10 meters. So by removing those modes, you not only turn away the illegals, you also turn away many of the people who could legally use the radio.

The people who make the 10 meter only rigs, know full well who is buying those rigs. The sales to hams alone would not justify continued manufacture. These rigs are simply not "good enough" in receiver performance, and lack many features of a good HF rig, for them to be very popular with hams, except as a "second set" or for the car, that they don't have to worry about.

Removing the AM section altogether (Just FM and SSB) and removing the microprocessor code that includes the 11 meter tuning tables, would probably satisfy the FCC. But it would kill the sales of the radio, and then what's the point of making it?

For the record, if you boil away all of the hype, fluff, pandering, spin doctering, posturing, and fingerpointing, what Kevin essentially said was that he participated in evidence gathering that led to the citing of 27 people. He never claimed that they were all in the court system, he never claimed to have directly participated in the arrest and/or prosecution of said illegals. That's it. I had no difficulty discerning that from what he posted. Unlike you, I don't get hung up on nuances, and instead focus on the meat of the matter.

And you're still as predictable as ever.......

And that's it from me.

Hello Dale:

Just like anything else, for the good stuff you have to did a little to find.

Franks (Yeti) little message there is quit a kicker, especially when he just said he wanted the CB Radio Service to be terminated, as he posted as Aaron Voobner.

Anyway yes, the CB Radio Service is a great help to our society, and has help millions of Americans, and other countries communicate in a inexpensive way.

There are plenty of good technical discussions and such, again you have look a little.

There will always be Hams bad mouthing the CB'ers, ands CB'ers bad mouthing the Hams, I am sure thats a FCC rule somewhere. But as with the bad, there is the good. I really think that Ham Radio is a great service, and has great people in the ham radio ranks. As you read the mail here over some time you will see. But I do enjoy the friendly people in both services.

Take care and hope to see around.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

I confused two issues, you are right it did say kHz. I was reading part of another web page pertaining to this subject that reserved the 25000-28000Mhz band for radio astronomy.

I understand. I was just countering with an extreme of my own. I think
we both know there's a reasonable mid-point where both camps can
co-exist happily. Unfortunately, the lids represent the "squeaky
wheels" and get most of the attention.

> No doubt. There are too many radios that have terrible channel

That's why I like the Channel Guard. It really does make a difference.
Add it to an already hot receiver and the combo's hard to beat.

Knock 'em dead. My offer still stands. If you need code tapes/CD's or
exam books, just holler. The Extra pool has changed though, so my book
will be missing some material.

> >>Do you operate illegally?
> >
> >Sure do. 0:-)
> >
> What a shame.

Yikes, did I write that! I misread your question as "Do you operate
legally?" My bad. I operate fully within the rules and regs. My Grant
XL outputs 12 watts P.E.P. on the legal 40 only. If you read the time

of my post, perhaps it'll explain some of my fogginess. (Gettin' ready
for work.) Emmmmmmbarrasing!

Spam: Items or services offered for sale, yes you
are spamming the newsgroup

> But a series of OFF TOPIC
> recipes posted by landshark are not "spam"?

No, it was a sig file of a recipe, it was not offered for
sale nor was it a service being offered.

>And professors ads for
> illegal amps are not "spam"?

He was flooding the group with offers twice a day
or more a while back, got his ISP pulled. He's not
posting it every day, twice three time a day like you.

> And Train's ads for illegal amps are not
> "spam"?

Nope, if he offers it for sale and starts posting everyday,
even twice a day then it would be Spam, just like your doing.

There is a Yahoo group that is moderated for
just this reason. Also it's not a "Ham vs. Cb'er thing,
it's a troll thing. These individuals posting illegal this,
illegal that are here only for the trolling, not for the
good of the radio. Just like the cb radio, to which
you are familiar with, there are some here that feel
because they are anonymous, they can Spam, harass,
send abusive e mail, flood the group with repetitive
post saying the exact same thing.

Good Luck and sorry that you couldn't
get the info you were looking for.

Twistyboy, you are either trolling along or you are just so dim-witted that you can't read and understand what people have written. I'm beginning to wonder if Dave was right about you.

I can just picture you sitting in front of your little nine inch color television. Your X-Box and PS2 are sitting at your side. The Bevus and Butt-head cartoon you just watched is a rerun that you've memorized. It's late at night, you're by yourself scarfing down what's left of the cold pizza from last night's party. There are bottles of stale beer sitting all over the place and the room reeks of smoke. Your tongue stud is bothering you so you take it out and wash it off with what's left of your beer and you pinch yourself while putting it back in. The buzz from the last hit on your joint is wearing off so you reach over for another hit and DAMN, it's gone out. Your bag is empty so in frustration you take some of the hemp from the seat-cushion of what's left of that antique sofa your roommate got from the flea market last week. You light it up but, DAMN, it's not hemp but horse hair! You think to yourself, wow, that's a new taste. Then you take another drag. The taste reminds you of that summer at your grandfather's farm in Virginia and times with Betty-Sue and her twin sister Betty-Lu rolling in the hay. Yep, you were 16 and they were 12 and two times twelve is 24 so you thought you were ok. Besides you didn't agree with that stupid law anyway. You loved the way that they would stick the straw through the hole between their two front teeth. Those were the days! Then you snap back to the present, frustrated because that horse hair joint isn't giving you the buzz you wanted. What's a Twistyboy to do? He gets onto his Web-TV and reads the CB newsgroup to see what he can twist today.

Kevin, WB5RUE

The above story is fiction. Any resemblance to actual events or persons is purely coincidental and unintended.

1453. 10M rigs, Customs, legals-The Real Deal...

Newsgroup: rec.radio.cb
Date: 2002-07-17 16:23:53 UTC
From: shitblaster@volcanomail.com
Message-ID: <90a278e1.0207170823.463b4435@posting.google.com>
Source record: 130482

x-noarchive:yes

It's interesting to see the various "letters" the Boobners post about the FCC "informing Customs" not to import, & other 10M rig things, BUT...
The WHOLE story is that the FCC "lost" that case w/customs, & those radios were, & still are legally imported, because it was determined that they still meet all current definitions of 10M Amateur radios, which haven't changed in over 20 yrs. Ranger runs full page ads for the 2950 in QST & CQ regularly & includes their full US name & address in each 2950, 6900 & other "10M" rig's box, making it quite easy to "cherry pick" a big violation of an importer if the FCC actually could. They have dealt with RCI many times before, & know EXACTLY what they are importing & Distributing on a regular basis, & Ranger isn't stupid about it either.
If the FCC wanted, just like amps they could actually amend their rules rather quickly. the "No amp shall be imported or marketed capable of operation on 24-35Mhz" is a REAL, Actual FCC regulation. They could easily put in a " No HF Amature Radio shall have a 40 channel selector switch" , memories in Banks of 40ch, or a Band or other selector swith that is inoperative as sold". This would close the big loophole on all the Galaxy's connexes etc right away. And unlike amps, non of these radios are made here, so they woud severly dry up, & most major distriutors would be out of the 10M radio business, less they would become a target that they Aren't now.
The FCC has never proposed or amended this, they simply hassle a truck stop evey couple of years, & send internal letters & memorandums that aren't FCC Rules... Why???

> completely.

Excellent post, Frank. I might also add that there is a recent trend
in the CB world for "10 meter radios" and there have been recent
problems with CBers setting up shop (intentionally or unintentionally)
in the amateur radio bands. I'm not saying that all CBers are doing
this, but there are a significant number. A look at the Copper.com
sales page reveals that fully 80% of all "CB radios" listed are being
called "10 meter radios" now. There is even a message on their forum
from a Copper exec advising a customer who asked about Midland CBs
that Copper has phased out Midland because of low demand for 40
channel basic CB radios. (Imagine that!) So some of the arguments
you're seeing in this NG are backlash from hams who meet with
resistance when trying to "get the word out" to CBers that 10 meters
is not part of CB now.

Regarding someone saying they're running a Wilson and then being accused of running power...it doesn't happen that way. The arguments typically start when, for example, a self-styled "expert" feels the need to impress everyone by dropping into a discussion about antennas and letting them know he is able (and willing) to run some ridiculous amount of power through his antenna system in order to be heard to the exclusion of all others on the channel. You know the type.

Other arguments are the result of longstanding feuds. For example it doesn't matter what I might be talking about, someone will eventually toss an insult my way because at one time or another I disagreed with them about illegal CB operation.

I hope all of this doesn't scare you off. As Frank said, you have the chance to make some positive contributions here. There's a lot about CB radio worth saving. I'd really like to see it go back to being something that everyone can use, rather than just the few with the most power.

Riley Hollingsworth is actually quite a nice fellow in person. He has a dry, biting
wit that often shows up during his speaking engagements. He is of average build,
often quiet and unassuming, and if he had not garnered the notariety he has, you
would never know he was an FCC employee. He speaks softly, but *can* carry
a big stick--as some people have found out. There used to be some of the awful-
lest mess going on on 3898 KHZ and 14313 KHZ you ever heard. Those freq-
uencies, the last time I tuned across them, were silent. That was due to his efforts.
Truly, one doesn't want to get in his "gun" sights.

Riley would most certainly discuss any aspect of radio. As I recall, that
is not illegal. It is not illegal to have an amplifier in one's possession. If a non-licensed
person had one sitting on a shelf gathering dust, you'd never hear about it unless
you got RH's attention in some other way. I have a Messenger M4V I acquired
from an estate of a ham. It appears to be pretty clean, is Class AB(?)--I never
thought about it until just now, believe it or not--, but it is sitting out in my storage
area. I'm not quite sure what to do with the thing (No, I won't sell it except to
another ham) and I am not sure I can even legally sell it. I was told that
the ham who had it went thru it and added some more filtering, but I'm also told that the
Messengers are pretty good utility amps to start with. Why don't I use it?
I don't need it. One hundred watts on HF does everything I need to do, and
amps draw great amounts of current, require great big wires and solenoids to operate
them--more trouble than its worth. I couldn't resist buying it because I got

it kinda cheap.

Riley would talk about everything you want to--ham radio(you ought to hear the
broadcast quality station he has on HF), CB, illegal amps, 10 meter bootleggers,
and what he intends to do about it. Talking is still legal.

memorandums
>that aren't FCC Rules... Why???

I disagree that this is "the real deal". The very fact that the regs barring illegal gear are still enforced and still in place contradicts your suggestion that the FCC is powerless or unwilling to halt widespread illegal high power and out-of-band operation. Do "business interests" sway government policies? Of course they do, I don't disagree with that. Can manufacturers and pirates "force" the FCC to allow a defacto 24-32 mHz high power unlicensed radio service to exist? I doubt it. The FCC and the amateur radio community are beginning to wake up to the fact that equipment intentionally designed and marketed for the sole purpose of being used illegally is a serious

and growing problem that effects legal users of the radio spectrum, not only in this country but in the rest of the world. The FCC is traditionally slow to react and respond, but I'm willing to bet that the "illegal" interests will be on the losing side of any future FCC response.

Okay while in germany with the army I bought a nice CB ... it would change from one countries to another countries CB Band thru a programming routine for the entire EU. Over here "thats Illegal" but it does have a US mode (40 ch 4 watts) it does have the FM but it is used in some countries. The deal now is, in the US do I have to throw this away and buy a cobra (that is inferior in preformance in all aspects) or is there some way to get "type accepted"? If the radio remains in the legal limits is it a problem?

I would ask the FCC. I'd hate to see someone throw away a good and expensive rig cause of some idiot. There are some loons here.
I know that it used to be that anyone can own any Ham equip but you needed the liscense to transmit. That gave people getting there liscense the opportunity to listen to the procedures experienced hams use. Maybe the FCC can grant a waiver (if it is illigal) based on your service to our country.
Sincerly,
Ken

Absolutely and I have learned allot from here from both the legit Hams and the freebanders and legit cb'ers.
Ch 19 is the most popular band by far and was the world's first chat room befor the internet. While you find allot of flames trolls and high tempers you do find some of the most freewheeling and intalectually open debates about today's topics on cb rather then Ham. This newsgroup reflects the freedom and character on cb radio itself and I belive is part of it's charm. The only thing missing is the music playing but maybe we can post some zip files.
There are a TON of cb web sites some with forums but nearly as active here.
Sincerely,
Ken

FS or TRADE MODULATOR WITH BUILT IN 13.8V@10 AMPS POWER SUPPLY
Very nice unit. Run you mobile in the house with this power supply and
modulator combo. 50-60 watt modulator.This thing gives you alot of extra
audio everyones says its really loud!! or just hook up your base rig
and use the modulator for a driver. will run anything 12volts up to 10 amps
with the built in power supply. size 11"W x 12"D x 5"H weighs about 7
or 8lbs has meter for voltage, lights, screw on terminals on the front
to hook up your radio for power.Asking 165.00+shipping or trade what
you have laying around?

1466. Review: Superstar 3900HP Gold

Newsgroup: rec.radio.cb
Date: 2002-07-17 21:23:33 UTC
From: Kenneth <pwrguy@intergrafix.net>
Message-ID: <ujbo2jldkfffba@corp.supernews.com>
Source record: 130495

About a year and a half ago I bought this radio and so far it has preformed well. It has 6 Bands but frankly I would be happy with just 3. The cb band and the high and low side. With the swr set so the lowest swr is right at ch 20 i get SWR of 2 to 3 at the farthest bands but the adjacent bands swr's are still pretty low at 1.3 or so. This is with a radio shack antenaa and 6 ft of RG-8 coax from same. The radio shack antena was 39.00 with the hood magnet and was the 10M/11M model with the gold coil. I try to avoid buying anything radio related from truck stops. The SWR may be a funtion more of the antena the the radio.
The face is gold colored and to me is butt ugly. I'm not into the whole"huggy bear" look from the 70's. I got mine with the ranger mic with echo and reverb(a complete waste and junk to boot) and the RCI freq meter which does come in handy cause you can set th clarifiers so you recieve and transmit on the same freq. You do get some freq drift mostly when first turned on then stays constant.
During theis whole time I drive to NYC almost every day. Between 65 and 70 on the crossbronx expressway, one of the roughest roads in the country, and so far no problems. I can't complain there.
It was peaked and tuned by exportelectronics and while bleedover is maybe 2 channels I'm not happy with the job they did. My next radio will NEVER be tweaked and tuned. Someday I hope to find a way to set it back to factory specs but I'm not holding my breath.
One more thing. This radio has a roger beep that is LOUD! Moreover there is no off switch! With the extra mic that when new would sometimes stick my friends would hear rapid and loud beeping that drove them nuts. To disable it you have to find jumper j-9 i believe and cut it but make sure since i could be wrong. I cut the jumper about a month after i found out where it is from this newsgroup.
Would I recomend this radio? If your thinking of buying a cobra absolutly. If your looking at Rangers and Galaxies? No Has it performed well? absolutely and is a thousand times better then the radio i got from a truck stop (cobra). If I had to do it again i'd just get the radio and maybe the frew counter. Tweaking and tuning is a waste. If u need more power amps are always easy to get. Also I would not mess around and go for the 108" whip antenna.
Sincerely,
Ken

Did you check the squelch to see if it was turned down? Turn the knob counterclockwise and turn the volume up a bit, and you will have static if nothing else out of the speaker. If not, then the radio has a problem.

> ..I
> had the cb in a mazda truck and it worked great ...went to hook it up in

Sounds like the basic problem is in the radio if the volume and squelch are adjusted properly. The radio speaker should emit static noise even if there is NO antenna, so that isn't the problem.

I'm not 'sure' about the reason for the HTX-100 demise, but I have
heard that the HTX-10 was developed because Radio Shack didn't want
people modding their radio for 11 meters.

FWIW, ALL of the reports I've heard about the HTX-100 have been good,
and there are just as many HTX-100's floating around eBay as there are
IC0706's.

Thank you all for your responses to me. It was so nice to get such friendly responses! I think it is so sad to see people argue and threaten over these issues when there is so much more at stake in the world today.. I really enjoy CB, and I think a lot of other people do too, at least around here they do, and a lot of them with little 30 dollar "yard sale specials"..LOL.. I know only a few who have the Galaxy's, etc, and even they run them courteously. In my area, Lancaster Ohio, we can still have good conversations. Oh sure, there are a few people who run all the "toys" and stuff... but as a rule, you can talk to people all around the city and in neighboring ones easily.. even on Channel 19, there is courteous conversation, of course most of the truckers who come thru this area are on regular runs down US 33 and are familiar with us and will talk to us without telling us to "get off their channel"! We very rarely have a "power war", there is like one teenage boy in the next town who likes to play music and run his little 250 watt kicker, but he's rarely in there.

The point is, it's very nice to see that so many of you really are interested in CB's still. Yes I have gotten good advice on here, when I had problems, and I thank you all for that, but for the most part I thought it had turned into people trying to get rid of CB. Many of you, and I don't know all your names, seem to have so much technical knowledge that it amazes me. I thank you for the invitation to stick around, and I will do so.. I hope we can have good discussions in the future..

God Bless

Dale

I just had this happen to me a while back. Does the radio power up, you just can't hear anything? Check it with an external speaker if you have one. On mine, the spade clip on the speaker inside the radio had vibrated loose somehow.. slid it back on and it was fine...

Just another opinion...

The problem is nothing short of your sense of honor. Are you the type
of person that will do the right thing even when no one is looking? I
won't judge - it's up to YOU to decide.

Also, I am curious what make and model it is and what what frequency
range your radio covers. If it goes above 28 mHz and it was advertised
as a "CB" they might have some explaining to the ITU to do.

I don't think anyone here want's to get rid of CB (despite false
claims to the contrary -- see my first response). You have to accept
that there is going to be some discussion that you will find
disagreeable, but for the most part this newsgroup is becoming a place
for EVERY CBer. The illegals can use other, more appropriate groups,
and they have many forums on Yahoo, alt.radio.pirate, and some private
message boards. This is a place for CBers. So come on in -- the water
might still be a bit chilly, but not so cold you can't enjoy it!

Dale,
I couldn't agree with you more. I'm new to this newsgroup also and I've been pretty shocked by the hostility on this board. I posted one question and got zero responses. Oh, well.

I, too, am saddened by a lot of the junk on the airwaves. I like a little friendly chatter when I'm on the road. It helps pass the time on a long drive and is just kind of fun.

I'm considering getting a used 148 GTL - they seem to be the standard for good AM/SSB radios, so I'm glad to see you run one in your mobile. I have a Wilson 500 on my mobile - I haven't had it long, but I'm impressed with it so far.

Donnie, forgive me but I guess don't understand what your "modulator"
is and how it can "drive" a CB radio. I'm guessing the 50-60 watts you
refer to is audio. If you put 50-60 watts of audio into the 1st stage
speech amp of a typical CB rig all you will get is distortion. Maybe
you are talking about AM modulating the final tube or RF power
transistor of a CB radio, and in that case you'd only need around 2 or
3 watts of audio to do that, so I don't understand what the 60-60 watt
rating is about. Since it appears you are desperately trying to sell
this thing (whatever it is) to a CBer maybe you ought to give us more
info.

Voobsie, if you have the technical knowlege of a billy goat you don't even
want to know what a 'modulator' is. Suffice it to say it is tied into the
same ridiculous and obsolete theory of AM that produces Swang. One more
piece of trash designed to take advantage of the slo-attack characteristic
of AM-AGC while producing garbage. Loud all right, not pretty, but
definitely loud.

For the nonce, you have been un-Bozo*Flushed.

But the amp that you are referring to does not have an adequate heat sink.
It also has the heat sink inside a virtually closed box with very little air
flow by convection possible. You are comparing apples and oranges...

You have obviously never seen a power supply sacrifice itself to save the fuse :-).

But it is not strictly necessary to the operation of the unit and adds to the probability of a failure. In the loss control or risk management biz it is a question of frequency and severity. You will grant that one will often take a little frequency to avoid severity.

In the early days of TV there was a lot of controversy in the biz over the GE 'gutless wonder' approach (selenium rectifiers, series string tubes, no xfmr) vs the DuMont 34 tube wonders.
The theory that parts not used will never go bad was taken to its extreme by Mad Man Muntz. Sound familiar?

What you really want to do is design the One Horse Shay, it all falls apart at once. Not only is it maintenance-free, it is maintenance-proof.

1501. Questions re. strange antenna on roof of gov't building

Newsgroup: rec.radio.cb
Date: 2002-07-18 04:31:54 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10207172230180.44054-100000@srv1.calcna.ab.ca>
Source record: 130530
Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb,alt.radio.scanner

On the roof of a government building near me there is a strange looking antenna (or at least what looks like one): it looks like a very long downhill ski which was wrapped in an upward spiral fashion around an Indian teepee, with a gap between each spiral turn of the "ski" of one "ski" width. Then the "teepee" was removed and the "ski" was put on some kind of wire mesh or similar frame. What is this antenna for? What could it do? What special characteristics could this antenna have which would make it suitable for whatever task it is intended for?

A note to the trolls and flamers: I have already thought of the possibility that this antenna is used to monitor Indian radio transmissions or make smoke signals; so I scooped you. I am just trying to see whether I am right or wrong about this.

Thanks in advance,

Ian Douglas

Aha, I appear to have struck upon a subject to your liking and have
received the dubious honor of being un-flushed. Terrific. But truth be

told I am sincerely puzzled by this "CB modulator" business and would appreciate an explanation minus macho posturing regarding degrees of knowledge. What Donnie is peddling exclusively to CBers doesn't look at all like the modulators described in the moldering copy of the 1962 ARRL Handbook setting here on my desk. Is his "modulator" merely an AF speech compressor? If so, 60 watts is an awful lot of AF, unless you're listening to Eminem in a 4-door lowrider Chevy equipped with subwoofers in each door. If your goal is distortion and fried components, why not just run 110 VAC thru the mike jack and be done with it? Or am I missing something? Please advise.

Yes you might find it chilly, due to the fact some people can't see
beyond what they think is illegal and what is really legal. So it's ok,
there are people that will answer both the legal and illegal aspect of the
conversation, but some people are still trying to say that the mere
discussion or admittance of illegal use
is wrong here.
Please ask away, the worse you can get is what the
previous response was giving, bogus advice.
You seem like you can tell from right from wrong,
without someone else's help, so "Rock On"

> > Thanks,

Seems to me like the original poster was just wanting basic information, he
did not ask for complicated formulae and figures. I think he just wants to
buy an antenna, NOT design one.

==
> I took apart a helical recently that had about 30 feet of
> #16 wire. Let's just assume for a minute that it was #22, ok? Now if
> #22 has 16.5 ohm per 1000 feet,
==

That is at DC, nobody is trying to put DC up their antenna.
Did you consider skin effect? Thought not.

So, the rest of your calculation was a waste of time, as it was based on a
very basic error at the beginning and so you fell at the first hurdle.

==
> So which do you think is more significant, brain: 1%
==

See above, regarding your failure to observe a basic fact.
Or did you mean to ask "who is more significant, brain or Yeti"?
I feel that is your real issue here.

==
> or 50% due to helical design?

==

Not all fibreglass antennas are helical, many that have been sold over
here were not.

==
> >FYI: The UK still has an antenna width rule, any idea why that is
> >still in place when they removed the supid height and length rules?
> >Maybe they also believe that width makes a difference.
>
> Maybe you can research your implication and see if it has anything to
> do with this discussion.
===

How about looking back at the original question and seeing if great
mathematical formulae was asked for?

The original rules set out stated that the antenna ERP should not be more
than 2 Watts, if the antenna was above about 21' from the ground then low
power (0.4 Watts) was to be used.
You think maybe the rules were made for reasons of aesthetics?

Unlike your Government, who allowed HF, beam antennas and 12 Watts
of SSB, then tried putting a legal distance limit in place... ours placed
limits
on antenna length, width, height and erp, then told us we can talk as far
as we can get. Unfortunately, they found that height rules, while limiting
distance, also caused inteference.

Maybe you have nothing better to do than research rules just for a p*ss**g
contest, but I do. Maybe you can do some research to prove that the RA
(the post office dealt with it in the early 80s) made the rules for some
reason
other than limiting output levels and so distance.

==
> go soak your head a while.
==

What's that about... some kind of stress therapy taught to you by your
"shrink"?
Maybe you should go back and discuss the need you feel to pull everyone
else down so that you can feel better about yourself.
All I did was agree with you that fibreglass antennas were NOT the
better option, and you have to turn it into a p**s*ng contest so that you
can fill the newsgroup with a load of figurework that was not asked for.
It is, after all, a CB newsgroup and your figures were just an attempt to
make yourself look good.

I know a good therapy for you... try boiling your head in oil.
Just an idea.

Brainbuster.

Back in the 80s, there was the belief that our Police listened to CB, but I just cannot go for that. There wouldn't have been much to gain from it as most laws broken over CB were not within their powers to deal with.

There was also a theory that the local RA chap went into the nearby CB shop to listen and get info, but I don't believe that either. He didn't need to listen there, with the tackle he had. More likely that, when in the area, he would go in for a chat and "cuppa" with the Amateur in the shop.

I remember when that happened. Frank was supremely pissed. But please note that he adjusted to the situation like a mature adult: he got over it. Some people might have never gotten over it. Some people might have used it as an excuse to be a "bad citizen", diss the government, and urge people to selectively break the law. Next thing you know they're in usenet newsgroups trying to convince people of the merits of bad citizenship (and making utter fools of themselves in the process).

>buy an antenna, NOT design one.

And that is how I responded. I gave him a simple answer. Then you
butted in with something about wire size being inefficient, and I
noted that wire size has little to do with efficiency in these
antennas. That's when you went off the deep end.

>==
>> I took apart a helical recently that had about 30 feet of

You still haven't come up with ANY figures for your claims, so don't
start begging me for more.

>So, the rest of your calculation was a waste of time, as it was based on a
>very basic error at the beginning and so you fell at the first hurdle.

Not until you show the figures that demonstrate that skin effect makes
a significant difference. Of course that will never happen, just like
it will never happen that you will put up numbers showing a
significant difference in the efficiency of these antennas due to the
wire size, or due to polarity losses, dielectric losses, etc.

>==
>> So which do you think is more significant, brain: 1%
>==
>
>See above, regarding your failure to observe a basic fact.
>Or did you mean to ask "who is more significant, brain or Yeti"?
>I feel that is your real issue here.

...or maybe you can calculate the difference in the resistance of a
wire at DC and 27MHz, and therefore show why it's significant, eh?
Yeah, I didn't think so.

>==
>> or 50% due to helical design?
>==
>
>Not all fibreglass antennas are helical, many that have been sold over
>here were not.

Check this out -- here's my reply to the original post:

>Fiberglass doesn't conduct at all. The antenna is a copper wire inside
>the fiberglass, or wound outside the fiberglass and covered with some
>heatshrink. The problem here is that when humidity/water gets trapped
>between the fiberglass and the copper, it corrodes the copper very
>quickly and thoroughly.

Did I make any distinction between helical or otherwise? No. In fact,
did I make any distinction regarding efficiency? No, you did. Keep
trying, brain.

>==
>> >FYI: The UK still has an antenna width rule, any idea why that is

Start with the idea that it should never be called a modulator because it doesn't in any accepted sense. It is to make one loud and add that there 'modjulation' don't yuh know.

It is an amp set up in one of several manners to vary its output in step with the audio component of the incoming signal to give that Swang, a non-linear Linear so to speak. Think of it as kind of a jackleg volume expansion circuit applied to rf.

Even among believers in swang this is considered a poor way to get it.

> You seem like you can tell from right from wrong,
>without someone else's help, so "Rock On"

Alrighty, here's a question for you sharkie. Is it legal to advertise
for sale a CB linear in the newsgroup? Or, for that matter, anywhere
in the US? If you guessed 'yes' you are WRONG! rec.radio.cb is one of
the few newsgroups where crimes are actually committed in the posts!

But I totally forgot, you are one of those people that doesn't believe
that the Code of Federal Regulations and the United States Code are
actually laws, do you? Despite all the information that has been
posted to the contrary and can be confirmed by anyone that can read,
do you still believe that it's ok to break laws because they aren't
really laws?

But that's another problem, sharkie. If they are not really laws, and
people who break them are not really breaking laws, then what's up
with your sig? They aren't "bad citizens" if they aren't breaking any
laws, are they? And if there aren't any laws to break, even the good
citizens are just as free as the bad ones!

Wanna take this a few rounds, too?

I want to move to your town. That pretty much describes the CB scene in
my area 25-30 years ago. Unfortunately, it's not like that here any
more.
Back then, the few idiots were run off by the majority of decent people
and they either straightened up and conformed, or they went underground
and were only active to cause trouble. Eventually it would get old and
they'd just go away for good. CB really isn't much fun if you have no
friends.
Unfortunately, when the "idiot factor" becomes the rule rather than the
exception, that's when it's time to throw in the towel.

Take care,
Dave
"Sandbagger"

Just a reminder that Funky Station is giving his annual keydown in new jersey
this saturday july 20, 2002. I hope to see some of you there.

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

And then what? Do all the millions of CB's, in use, simply vanish?

Since a great percentage of "11 meter users" have demonstrated indifference to conforming to part 95 already, what makes you think they would just throw away their rigs if the band became de-allocated?

It would take a monumental effort to bust every person who keys up CB. And efort that would cost the taxpayers more money than congress could allocate for such an effort (Assuming that the effort would be justified and in the public's best interest).

No, the best that scenario could hope for is to de-allocate the band, and then wait 10 or 15 years for the supply of radios to dry up, and the users will die off one by one. But 30 years later, there will still be a few that managed to keep their rigs alive.

Assuming that you really don't know what a "modulator" is (I suspect otherwise), I'll take the bait.

Conventional wisdom, and in standard radio terminology, a "modulator", is simply the stage that applys the voice information to the carrier in a transmitter. In the old days, many transmitters had separate modulators. A 50 watt modulator was good to plate modulate a 100 watt transmit carrier, to make 100% modulation on AM.

In "CB science" terms, a "modulator" is a deliberately NON-linear amplifier, usually a small one, that, because of its class "C" characteristics, shows a greater gain during the rise of the modulation envelope, than during the carrier. The net effect is a boost in modulation percentage, with respect to the carrier. As you might guess, those non-linear characteristics are also responsible for distortion products and typical spurious emissions normally associated with a class "C" amp being improperly driven on AM. So, for anyone who is responsible enough to want to run a clean signal, this would not be a good choice.

>more.

Hi Dave,

I live in suburban LI, NY and while it's certainly not perfect, it's far from the ugly picture some paint on the newsgroup. Sure, there's the ever-present ch. 6 that was there "way back then" too. For the most part the channels are quiet and you can always find a few friendly locals. Ch.'s 36 through 40 are pretty much SSB only with ch.38 LSB as the defacto calling frequency.

I do remember the times you speak of when the band was crowded, but courteous. It wa a cool time. Take it easy.

1530. The Latest R.A.I.N. Report

Newsgroup: rec.radio.cb
Date: 2002-07-18 13:56:53 UTC
From: eccraigjr@cs.comnospam
Message-ID: <20020718095653.07850.00001501@mb-mm.news.cs.com>
Source record: 130559

Hi all,

I'm providing the link to the R.A.I.N. Report. R.A.I.N. stands for Radio Amateur Information Network. Now before I hear the usual whining about how this is a CB newsgroup, yada, yada, yada..., be advised that this IS CB related!

http://www.rainreport.com/

Here's the description from the opening page of the R.A.I.N. Report website. You can then select the 'PRESENT R.A.I.N. REPORT' in either WindowsMedia or Real Player format.

"All Inclusive, Not Exclusive" The live town hall meeting sponsored by the Amateur Radio Newsline at this spring's Dayton HamVention generated some thought provoking talks we'll be bringing you over the next few weeks. None generated as much controversy as the keynote speech, delivered by Harold Ort, N2RLL, Editor of Popular Communications magazine. While his message may ruffle a few feathers, his call for merging ham radio's resources with those of other personal radio services in emergency preparedness is laudable. EVERY ham in America should listen to what he has to say. (16 minutes)

Mr. Ort was very specific about CB playing a much greater role in the grander scheme of things. For those who think all hams are trying to bash CB, take heart. There are definitely some who really have the CB's best interests at heart. Folks like Harold Ort, N2RLL, Alan Dixon, N3HOE, Tom Kneitel, K2AES, as well as others who are trying to help the CB...whether it's speaking in favor of CB radio in front of a <potentially hostile?> crowd, trying to get an archaic rule lifted, or writing informative articles and/or books that counter the misinformation that presently exists re. the CB, they're out there doing something and I, for one, am GREAT ly appreciative. Thought you folks might like to know and give a listenas well. Take care all. :-)

The FCC isn't "impotent" when it comes to Howard Stern. For the FCC Howard Stern is a cash cow raking in millions of dollars in fines. The station hosting him just chalks it up to operating expenses. Sure the FCC could shut down the station any time it wants but then the FCC would lose all that money. Congress isn't funding the FCC enough so they need to get their money somewhere. It basically started back when Congress told the FCC that it could no longer charge for licenses to the general public. This meant that CB and ham licenses were free. This cost the FCC millions and is the main reason that the FCC dropped the license requirement for CB in the first place.

What ever you want to say Frank, difference is it's
a court record, not some thing that was posted. How do
I know this was you making that post? Maybe it's Aaron
using your terminal or you Mother , Father, Sister or
Brother. But it is a court record about the littering deal,
not some post that was made over a computer which
is at the whim of anyone that wants to use it.
Why Sparky, I'm not even Landshark, I'm his friend Jason, can't you see
that over the computer? But please go ahead
and post that stuff, George did it for two years and he's still
here and posting, so what.

Just go ahead and read the Webster Dictionary,
third college edition, page 1173 & 765 and look at the
definition of "Rules" then "Laws" Two different meanings.
Part 95 is rules, Part 49 or is it 45 (I don't remember
which it is) is law, how come one is rules and the other is law?
Why not have them both rules or both laws?
But we went through this all before and I still stand
by my statement that you are not breaking any federal
laws when breaking Part 95 "Rules"

Isn't a power supply with a "modulator" built into it nothing more than one with a bad filter or regulator? ;)

1546. OT - the minister

Newsgroup: rec.radio.cb
Date: 2002-07-18 16:55:25 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <UrCZ8.3703$pv6.365262@cletus.bright.net>
Source record: 130576

A man goes to the minister at his church. "Reverend," he said, "we have a problem. My wife keeps falling asleep during your sermons. It's very embarrassing, not to mention disrespectful. What can I do?"

"I've noticed this and have an idea if you're up to the task," said the minister.
"Take this hat pin with you. I can see when Mrs.Jones is sleeping, and I will motion to you. When I motion, you give her a good poke in the leg with the hatpin.

In church the following Sunday, Mrs. Jones dozed off. Noticing this, the preacher put his plan to work. "And who made the ultimate sacrifice
for you?" he said, nodding to Mr. Jones....."Jesus!" Mrs. Jones cried out as her husband jabbed her in the leg with the sharp hatpin.

"Yes! You are correct, Mrs. Jones!" came the minister's quick reply.

Mrs. Jones then turned and glared angrily at her husband. Soon, Mrs. Jones again nodded off. The minister noticed.

"Who is your redeemer?" he asked the congregation, motioning toward Mr. Jones.

"My God!" howled Mrs. Jones as she was stuck again with the pin.

"Right again!" bellowed the minister, a slight grin on his face.

Mrs. Jones again gave her husband a real hard threatening glare. Before long though she again nodded off. This time however the minister did not notice. As he picked up the tempo of his sermon, he made a few hand gestures that Mr. Jones mistook as signals to sharply poke his wife with the hatpin again.

The minister asked, "And what did Eve say to Adam after she bore him his 99th son?"

"Mrs. Jones jumped up and shouted, "You stick that thing in me one more time and I'll break it in half and shove it where the sun don't shine!"

"Amen!" replied all the women in the congregation

OK, so it's an illegal RF amplifier that is more or less intended to sound bad. Donnie wasn't quite clear in his ad just what it was. I don't think this guy is doing CB any favors by pushing his overpriced dipoles and amps in rrcb. I see in the Rain Report that Riley is beginning to go after hams dealing in illegal CB stuff. All it takes is a complaint to bring it to his attention.

kenneth, the reason the f.c.c. cant "do" anything about howard stern...and thank god that they cant.....is due to the fact that his "right" to say what he wants to, is guaranteed by the constitution.there is no protection for those (myself included) who "fudge" part 95. the system is working just fine when it protects "ugly" speech. a system that only protects your right to "nice speech" is meaningless. there are times when we need to be able to" harshly criticise" our government,politicians,and each other. free speech is a right,not a privilege.we in this country seem to be forgetting the difference between the two.

"the right to bear arms" is probably the single most powerfull right that we have.it guarantees that all your other rights "will" be respected. just look at the party that is trying to re-design our way of life.(demos) they are also trying to remove that obstacle to their plans,for they know that once they go too far.....we had better be disarmed. think about it........gunslinger

Dave, I question whether it in fact raises modulation percentage. Given that the input was pretty close to 100% as most rigs with intact limiters are, if it did in fact raise modulation it would be absolutely unintelligible to the usual diode AM detector. The fact that it can be understood at all leads me to believe that the carrier is being amplified as well. So gee, we have a swang machine that at great cost and distortion successfully fakes out a slow-attack AGC.

Gawrsh and gee-whizzy wow.

Dave,
It really wouldn't be that difficult to do. First,
do away with Part-95, no such thing as CB radio in the
US. With no legitimate market, the manufactures quit
making radios. No problem at all finding 'illegal'
operators, they ~all~ are. Introduce another bill such
as PL-106-521, making it enforceable from local levels.
Give it 6 months or so for the 'word' to get around.
Make examples out of a few 'die-hards'. Bang, it's done.
Would it be very popular? No. Would it be easy?
Not really, but not ~that~ hard either. Is it very
likely? Not yet, but it's getting closer. Don't say it
can't be done, because it certainly can! Push 'them'
hard enough and we'll all find out.

Here's what I believe:

People cheat. People lie. People break laws. And many of them get away with it. It was always so, and probably will always be so. Is this a reason to cheat and lie your way through life? Absolutely not.

Some of the lame excuses I see offered in this NG are the worst of all possible justifications for breaking the law. (e.g. it's OK to break a law (a) if the majority want it, (b) if you can make money at it, or (c) if you have a desire waiting to be fulfilled.) Civil disobedience is also an often-quoted lame excuse. When someone breaks a law to bring about social change, there better be a damn good reason. So far I have not heard one.

This is a shot in the dark but it sounds like it maybe a satellite transmitter antenna. with the long ski looking thing being the feeder horn assembly. You might try posting to alt.binaries.radio-scanner with a picture of it for better analyses. I saw what sounds like the same thing out side of the CBC TV studios a few years ago but this looked like one of those big Swiss horns except it was about 30 feet long and about 20 feet at the base of the teepee quite the strange looking things.

ohh. well now that I know that WG is canadian and Ian is from Alberta.
Someone should state that this antenna is in canada. I live about 5 minutes
From Industry Canada's office in BC. I will see if they have one on their
roof. If anyone else should have one. I presume they should. But can't till
the morning.

Dev.

Message-ID: <f7a9c6ac.0207181451.ea72425@posting.google.com>
Source record: 130647

I just got my new Texas Ranger TR 696F SSB base station. Wow what a nice looking radio. Much to my suprise when I keyed the radio up it has a real bad hum in the signal. The audio sounds real bad too. I bought this radio as a new radio however the three screws accoss the back are missing. HMMM Also there was a warranty lable laying on the bottom of the box. You know that sticker that sayes if this lable removed or tampered with voids the warranty. Imagin that! It is my opinion that they sold me a used radio as new. They advertise a 696 in there deal dept that has a transformer hum at http://www.copper.com/cgi-bin/checkitout/checkitout.cgi?bargainsSTORE:CKIE:prodLIK-NE00070 01+
. I beleive they sent me that radio. When I asked them about it Suzanne got hostal with me over the phone. The only help she offered me was to return the radio and I would have to pay another 20 bucs for shipping and handling. I bet they would of gotton a restockin fee also.
I I talked to a Ranger technican. First thing that he had me do was check the power supply. He wanted to be sure that it was putting 13.8 volts. It wasn't it was putting out 15 volts.Then He had me inspect the board and search for cracks I didn't see any but what I did see where resein marks all over the board. Like someone had worked on this radio before. He also told me that it was copper electronics problem and Copper sayes that its Ranger's problem. Ranger just called me back they want me to send them the radio (I wonder what that is going to cost me?) I think that the HUM is a audio leak. Its not a 60 cycle hum. The sound of the hum changes when I touch the radio or microphone. The hum is there with the stock mic as well as my D-104. But the hum changes when I touch the d-104. It sounds like a bad ground some where in the audio chain.
Just another example of buyer beware. I bet I will not deal with Copper Electronics again. You burn me once its your fault you burn me twice its mine!

Whether P/S toroids are any good who knows. The nice thing about paying someone who knows is that it might actually work.

You are, of course, familiar with the Henry Ford story where he could not get some machinery to work and called Westinghouse to come and fix. Steinmetz himself showed up and spent about 20 minutes on one gizmo for which a bill for $10,000 was submitted. Henry demanded that the bill be itemized considering all he did was bang on some pipes.

So Westinghouse itemized the bill. Pipe banging $1, knowing what pipes to bang on $9,999.

Sure, to some extent you are paying for good advice but why then not deal with the moose?

It certainly has been - by our own government. Which is why Aaron H.
Voobner is THE Dumb@$$ TROLL. Try using your brain for a change.

It's probably not illegal in Canada or other countries. Why should it
be banned from eBay?

Hey Murray,

You know I always thought you were a pretty decent guy. Until now. That is just crap about our government letting terrorists in and you obviously don't have the knowledge to back up your statement. Where are your facts? Two non-Canadian citizens are caught with explosives trying to cross into your country. Sure, I doubt they were going over for a fireworks celebration, but that is really no need to blame the rest of Canada. Do you have any idea how many US based truckers are caught trying to cross into Canada with firearms in the cabs of their rigs? And why do you think that is? Because it isn't safe to drive the streets of America, that's why. Canada is known world wide as a warm and peaceful country. That is why we get so many immigrants coming here. I personally don't agree with that, but that's the way it is. How many illegal (Middle Eastern, Asian, Mexican, Puerto Rican) do you have in your country? Hell your INS doesn't even know where 90% of the LEGAL immigrants are. If you plan on being the most powerful country in the world you might as well put a target on your back. Me, I'd just rather be welcome.

Don't bother replying, you're already in the kill file.

Don't like the government? Elect officials that'll change it to your
likeing. Don't like the laws? Follow democratic process and change
'em.

>Which is why Aaron H.
>Voobner is THE Dumb@$$ TROLL.

How is it my fault that YOU don't like the laws?

>Try using your brain for a change.

I see you are using yours to bitch about laws you don't like but are
too lazy to change. That's a fine "use" for it.

>It's probably not illegal in Canada or other countries. Why should it
>be banned from eBay?

Good question. Ask eBay why it refuses to provide a vehicle for
foreign nationals to sell contraband to US citizens.

Max, I agree to most of what you said, Murray was way out of line dishing on
Canada, On 9-11 My father was on his way back from Nova Scotia, the Boarder
Crossings were all closed, they waited near 8 hours to get back into the US,
the residents of the town at the crossing were offering food and water to

everyone who got caught on the Canadian side, I don't know for sure, but I would be willing to bet that didn't happen on the US side. there is no other Nation in the world I would rather have as a Neighbor, as far as the guns, people who try to take guns across the boarder to a country that does not allow them is just plain Numb, but I also believe that an unarmed Victim (People) is an easy target for criminals. If a criminal knows I am armed he will be less apt to break into my house. and surly would never walk out. If you disarm the public the only one with guns will be the criminals. Our hats are off to our good neighbor CANADA.

I may be catching this thread late, so correct me if I am wrong, these items are not illegal to own in the US, just Illegal to use therefore Ebay should not Ban them ever, Same with Sirens and Blue Lights, not illegal to own just illegal to operate with out a permit. but Ebay Banned them too, Maybe Ebay wants to be the FCC Enforcement Division, or better yet worldwide Police for what is good or bad for you, but they will allow you to sell the nastiest Porno in the world. uh ???? where are their Ethics ???

The difference is that I admitted my mistake, and even though didn't
agree with the ruling I accepted the consequences. I even have the
integrity to put my opinions about the incident on my web page, and I
certainly didn't do so at anyone's prompting. The difference is I'm
not hiding, and I'm not covering up my mistakes with lies.

So what's your excuse, sharkie?

> Just go ahead and read the Webster Dictionary,
>third college edition, page 1173 & 765 and look at the
>definition of "Rules" then "Laws" Two different meanings.

Generally they are synonymous. But there are many definitions for both
words, and if you are selective with those definitions you can defend
any interpretation you want to some degree. But no selective
interpretation can stand against the intent of the U.S. Constitution:

"This Constitution, and the Laws of the United States which shall be
made in Pursuance thereof; and all Treaties made, or which shall be
made, under the Authority of the United States, shall be the supreme
Law of the Land;"

It might be called a rule, statute, regulation, code, or anything else
that is synonymous with law, but if it was made under the authority of
the U.S. Constitution it's a law!

>Part 95 is rules, Part 49 or is it 45 (I don't remember
>which it is) is law, how come one is rules and the other is law?
>Why not have them both rules or both laws?

Your lack of knowledge on the subject is pathetic. Title 47 is the
section of the Code of Federal Regulations dealing with
communications, and Part 95 is section of Title 47.

> But we went through this all before and I still stand
>by my statement that you are not breaking any federal
>laws when breaking Part 95 "Rules"

Ever hear the phrase, "Ignorance of the law is no excuse"? In other
words, it doesn't matter if you are truly ignorant or just acting the
role: the law still applies to you, sharkie.

1580. What is CB?

Newsgroup: rec.radio.cb
Date: 2002-07-19 00:51:21 UTC

This may sound like a strange question, but isn't CB some sort of mobile communications device used in vehicles? A CB operates on the 27Mhz band and has 40 channels, with channel 9 for emergencies? This is a sincere question. I am new to this.

From reading this newsgroup, one can conclude CB is more that that. So, I have a few questions.

(1) What is CB? CB uses some kind of slang language. Is this part of being a CBer? Or can one use ordinary conversation and still be a CBer? Can CBs be used stationary,outside of your vehicle? Do you know anyone that uses it that way?

(2) What sort of modifications or tweaks are permitted in CB radio? Antenna adjustments? Power output? CB accessories?

(3) What is freebanding?

(4) What is 11m DX?

(5) Why do Hams hate CBers? If CB is just ordinary communication, what would a Ham feel this is bad or feel superior about?

Not intentionally. If I catch myself going too fast I slow down. I'm
one of those slow-pokes that pisses off the speed-freaks.

But if you really want to make a comparison, a young girl was killed a
short distance from my home just a couple weeks ago by a person that
had no regard for speed limits. A couple months ago, again near my
home, a 15 year old girl was killed when she was riding with a kid
that thought it was cool to speed on a busy road. A few years ago, and
also a short distance from my home, a young lady was decapitated by
some joker speeding up for a yellow light. If you are suggesting that
it's an insignificant violation to speed, you are horribly wrong.

I'm not sure if I understand you correctly, but while everyone has the
right to free speech, you don't have the right to free speech in every
venue. That's why you can't yell 'fire' in a movie theatre. If the day
should ever come that the FCC eliminates CB radio, they would not be
preventing free speech, they would just be shutting down a venue.

Either way, when it comes to communication, money speaks the loudest.

>"the right to bear arms" is probably the single most powerfull right that we
>have.it guarantees that all your other rights "will" be respected.

Agreed without reservation.

That might be a little paranoid for me to agree with, but I will agree
that the government should shift it's priorities. You can do your part
by voting responsibly. Otherwise your elected officials will be picked
by people like Dave-or-Debby. I don't think anyone wants that to
happen...

In my opinion, the ARRL advocates all aspects of the hobby, including the technical aspects.

Without the ARRL, if it would up to most Hams. The hobby would become a bunch of operators with no interest in the technology behind the hobby.

Never try to impart wisdom on the humble.

Most likely, the person is stubborn and wants to stay in their lowly state.
-If you fail in imparting wisdom, the person will bring you down to the person's level and you will expend so much wasted effort, which could have been much better spent elsewhere.
-If you succeed, the person will decide the person is suddenly better than you and that you are no longer needed and will abandon you.

The third (and desired) possibility, that the person will gain wisdom and appreciate it, is also the least likely outcome and is so unlikely as to be not worth pursuing.

Any CBer's out there interested in working on some projects?

I have designed a transmitter for SW frequency. It works fairly well. I am working on designing a 27MHz (CB frequency) transmitter and other interesting projects.

I wanted to check out a Ham Radio club, believing they were interested in similar activities. It was disappointing to say the least. If Ham Radio lived up to even half its hype, it would be pretty interesting. My advice would be to get the licence, but then not be a Ham.

Trying to find Hams that are inclusive to the technical side (or even the operations side) is an exercise in futility. The only way to learn about the operational side seems to be buying your own equipment. But this is expensive, and why have a club if one cannot share experiences? Sometimes I just want to learn one aspect (for example APRS), but not use it all the time. Buying the equipment is then too expensive.

To be fair, I did have some opportunities to do some antenna installations. Also, Field Day is a good opportunity as well. But these opportunities occur too infrequently.

I do not consider myself a Ham. Being a Ham is following Ham traditions as much as getting the licence. Hams like to "Contest". This means contacting as many people within a given time period. While it may be interesting to contact someone from another country, the idea of rapid fire contacts does not interest me. Ham awards seem to emphacize volume over skill level. For example, there are awards for contacting every state ("Worked All States"). Also, I do not care for all the terminology that Hams use. Hams regularly use Ham lingo in their conversation. If my initial introduction was through Ham radio, I would have though this is boring or silly, and would have been doing something very different.

I am with the true spirit of CB operation. Mobile operation is interesting to me. I love the idea of doing something technical and how that fits together with operation. I liked doing calibrations and doing field tests. Its what got me interested in this area. I also like the adventourous aspect of radio direction finding and getting transmitters to work in various locations. I like working on on radio electronics circuits and setting up antennas.

>This may sound like a strange question

Not at all.

>but isn't CB some sort of mobile
>communications device used in vehicles?

It can be, but it's not limited to mobile or portable (h/t's or walkie talkies) operation.

>A CB operates on the 27Mhz band and has
>40 channels, with channel 9 for emergencies?

Correct.

>This is a sincere question. I am
>new to this.

And you deserve a sincere answer.

>From reading this newsgroup, one can conclude CB is more that that.

The FCC intended the "Citizen's" Band to be a short range land-mobile radio service. Your observation is correct however, much to the displeasure of those who belive it should remain exactly as originally intended back in 1958.

>(1) What is CB? CB uses some kind of slang language. Is this part of being a
>CBer?

There are as many different ways to talk on the CB as there are individuals in everyday life. The AMer's gernerally use the APCO '10' codes, the "hobbyists" generally stick to sideband and employ (albeit often incorrectly) the 'Q' codes, and the illegal high-power guys on ch. 6 use a lingo that I've yet to successfully interpret.

>Or can one use ordinary conversation and still be a CBer?

Sure you can. I QSO with the other op as though I'm having a friendly face-to-face conversation, be it on AR or the CB.

>Can CBs be used
>stationary,outside of your vehicle? Do you know anyone that uses it that way?

If you mean as a base station, yes. You must use a 13.8 volt DC power supply rated for about 5 amps. (That's for a sideband rig.) This is my setup. If you mean portable with a walkie talkie, the answer is also yes.

>(2) What sort of modifications or tweaks are permitted in CB radio?

Very few. You can bend a little with some modulation adjustments, (Power mic, speech processor, etc.) but the output power must remain at 4 watts AM and/or 12 watts P.E.P. (Peak Envelope Power) SSB. (sideband)

>Antenna
>adjustments?

Keep it at or below 60' and the sky's the limit. You are allowed to exceed this if you mount your antenna on a pre-existing structure, but no higher than 20' above said structure.

>Power output?

Again, 4 watts AM and 12 watts P.E.P. SSB.

>CB accessories?

Some of these can actually get you in trouble. (Theoretically, at least.) If a power mic causes your modulation to exceed 100%, you're in violation. Echo devices, roger beeps, and the like are theoretically illegal, but commonly ignored. Amplifiers are a different story. They're bad news so stay away from them.

>(3) What is freebanding?

Operating above or below the legal 40 channels. Generally, the accepted freqs are 26.0000 - 26.96499 MHz and 27.4051 - 27.9999 MHz. Pass the 28.0000 MHz line of demarcation and your in the 10-meter ham band...bad news.

>(4) What is 11m DX?

The CB is allocated in the upper HF spectrum. This supports a natural phenomenom known as sky-wave propagation. The transmitted radio waves are reflected off the ionosphere and back to Earth at great distances, hence DX. (Distance abbreviated.) DX on the CB is currently against the FCC rules, but commonly heard on ch. 38 LSB. (An unofficial DX calling channel.)

>(5) Why do Hams hate CBers?

Not all do and some are both, such as your's truly. Please see my other post/thread entitled 'The Latest R.A.I.N. Report' or visit:

www.rainreport.com

to hear a ham trying to help the CB.

>CB is just ordinary communication, what would a
>Ham feel this is bad or feel superior about?

Fear and insecurity. However, like I said...they're not all like that. Hope this helped. Take it easy. :-)

Sounds more like a troll post. But I'll give you the benefit...

>From reading this newsgroup, one can conclude CB is more that that. So, I have
>a few questions.
>
>(1) What is CB?

The first place to start is here:

http://wireless.fcc.gov/prs/citzn.html

The Citizen's Band radio service is a low-power short-range radio
service intended for personal or business use. RF power is limited to
4 watts using Amplitude Modulation (AM) and 12 watts PEP (Peak
Envelope Power) using SSB (Single-SideBand modulation). It is also
limited to 40 specific frequencies, or 'channels', from 26.965 MHz
(channel 1) to 27.405 MHz (channel 40).

> CB uses some kind of slang language. Is this part of being a
>CBer? Or can one use ordinary conversation and still be a CBer?

There is no requirement for 'slang'. Talk any way you want, just try
to avoid being rude and crude.

> Can CBs be used
>stationary,outside of your vehicle? Do you know anyone that uses it that way?

You can have a CB in your car or in your house, and there are even
hand-held CB radios.

>(2) What sort of modifications or tweaks are permitted in CB radio?

It is illegal to modify a CB radio to operate in any other way. Most
modifications are intended to make a radio 'loud', but not necessarily
'better'. These mods can distort your audio and splatter your signal
into nearby channels.

> Antenna
>adjustments?

Some antennas are better than others. Ask around and see what other
people prefer, then pick the one you like best. Antennas need to be
adjusted for best efficiency. The way an antenna is adjusted depends
on the type of antenna.

> Power output?

See above.

> CB accessories?

Whatever you want, provided it doesn't modify your radio or amplify
your signal. Many people find 'noise-toys' and 'roger-beeps' annoying.
External amplifiers, sometimes called 'linear amps', are not legal.
The typical fine for getting caught using an amp is several thousand
dollars. Even though the law is poorly enforced, know that most of
these amps are of poor quality and will splatter your signal across
several channels. Even if they work fine they will step on other
people's signals on the same frequency that you can't even hear. Amps
are rude -and- illegal.

>(3) What is freebanding?

Operation on any frequency without authorization. This is not CB, it
is radio piracy, and it is illegal.

>(4) What is 11m DX?

DX refers to long-range communication. CB radio is supposed to be
limited to 155 miles, but sometimes you will talk to a station
hundreds of miles away and it will sound like it's right next door.
This distance regulation might be dropped soon.

>(5) Why do Hams hate CBers? If CB is just ordinary communication, what would a
>Ham feel this is bad or feel superior about?

Don't believe everything you hear. Some people around here are trying
to stir up trouble by saying that hams hate CBers and vice/versa. The
only hate I have seen on the newsgroup, or anywhere else, it contempt
that illegal operators have for legal hams and CBers. That's my own
personal observation.

I have been partial to this one myself:

The early 20th century was not much better. In 1912, feminist Margaret
Sanger was arrested for giving a lecture on birth control. Trade union
meetings were banned and courts routinely granted injunctions prohibiting
strikes and other labor protests. Violators were sentenced to prison.
Peaceful protesters opposing U. S. entry into World War I were jailed for
expressing their opinions. In the early 1920s, many states outlawed the
display of red or black flags, symbols of communism and anarchism. In 1923,
author Upton Sinclair was arrested for trying to read the text of the First
Amendment at a union rally. Many people were arrested merely for membership
in groups regarded as "radical" by the government.

Why yes they do, just like you sparkie ;^)
But to appear in federal court you must first break
part 95 "rules", be notified and made aware you are
breaking the FCC rules. If you continue to break
part 95 "rules", you then will be charged with breaking
part 47 laws and have to appear in Federal Court.
Take a look at the FCC website, that seems to
be the norm for how it works. Now there is a few
exceptions it seems when you are charged right away
with breaking part 47, but more rare than it is for littering
in you neck of the woods. (Just joking, don't burst a
gasket)

First thing you need to do is go to http://www.bbb.org and find out about filing a complaint with the Kentucky office in Louisville, where Copper is located. The resolution you should ask for when filing the complaint is a new Texas Ranger, shipped to you at no extra cost and Copper should pick up the shipping on the broken one. Next, contact the Consumer Affairs Division for Kentucky and see what you have to do to file a complaint with them. The next thing you should to is contact your local Postmaster General and find out how to file a mail fraud complaint. Sending a radio to you as new when it obviously is not new may violate state or federal law. After you've done that, you should contact Copper and tell them what action you have taken and how you want the situation resolved. They may be more receptive to working with you once they hear you are going to do more than pout and hold your breath.

The funny thing is that most "legit" ham radios can be modified just as easily if not easier than many 10 meter radios. One example: The Yaesu FT-100D. Remove one simple diode with a soldering iron and you can transmit on most of the HF band and even into some public safety VHF frequencies, so instead of harmlessly talking on frequencies between "Channel 40" and the 10 meter band, which I have yet to hear one LEGIT operator, you can cause interference to your local PD, fire or EMS!

Now, where's the sense in that? Check out www.mods.dk and you'll find very easy mods to open up TX on almost every modern ham radio in existance.

I think the real point is that these people are not really doing any
harm to anyone with the exception of those that stray into the 10
meter band. At least there's no one on the frequencies they are using
other than fellow "CBers". Just think of the thousands of hams with
modified 2m rigs that have the ability to "Ker-Chunk" their local
police repeaters. Aren't these the REAL problems? We have someone
locally that I believe may have been a ham before because he keys up
on the local 2m and 70cm repeaters, causing all kinds of havoc. I
don't think a non-ham would go through the effort of getting a
dualband rig and learning how to use it just to cause problems. What's
to stop him from tuning that VFO up to the 150's?! Many departments
are still operating in that range!

The U.S. government puts ever-increasing restrictions on the radio frequencies which it's citizens are allowed to monitor (cellular, cordless, remote broadcast, etc.) Canada does not.

The U.S. government is now actively encouraging it's citizens to spy on one another and report on their neighbor's activities. Canada does not.

The U.S. government defines an "adult" as someone 18 years of age or older. It requires Selective Service registration by males 18+. However, it enforces prohibitions on gambling, purchase of alcoholic beverages, and purchase of handguns/ammunition until these "adults" reach age 21. Canada does not.

So now, where is the "land of the free?"

Maybe you missed the part about 'Notice of Apparent Liability'. The
FCC doesn't usually enforce regs through the courts except for
collection on an NAL (which may or may not be legal, but hasn't yet
been challenged in the Supreme Court).

> Take a look at the FCC website, that seems to

Well, I'll tell ya what: The way the law is written in Spokane, if you
drop an -unlit- cigarette (it doesn't have to be lit, just "capable of
being lit") while you are walking down the sidewalk it's $950, but
it's only $25 to toss a lighter or book of matches. And the law is not
enforced with due process; there is no such thing as 'beyond a
reasonable doubt', it's by 'preponderance of the evidence', and even
the evidence is questionable. Hell, I could have tossed a lit joint
out the window and only got a $25 fine, just because it wasn't
tobacco. Not only that, but the entire littering law is enforced with
TOTAL disregard to another part of SMC requiring an officer to attempt
to correct the violation before a citation is issued. Don't -you-
think something is goofy there?

>

And I used my right to freedom of expression to disclose the faults with the law in Spokane. I didn't use it to say that "bad citizen's have more fun because they are free", which is absolutely stupid. I have plenty of fun defending my rights. But it's a shame that the good citizens get criticized by the bad citizens for defending the rights of all citizens, good or bad. I guess that's how bad citizens have more fun, huh?

> WA2SI

I listened. Kudos to Ort for contributing something positive to the
CB/Ham issue. (Course it wouldn't hurt his magazine if CB became a
really popular hobby again.) I honestly think many CB'ers *would* rise
to the challenge and work together with hams if there were a 9/11 type
national emergency that required emergency comms. OTOH, some of the
comments I am reading in the other threads in this NG, many "11 meter"
hobbyists diss the US Government and make excuses for why they don't

have to follow rules. I can't imagine these folks would behave themselves as part of any serious radio net. And it would be a shame if the proposal of integrating CBers into a national emergency comm plan was dismissed because of their reputation for being untrustworthy when it comes to observing frequency allocations. Hopefully people like Ort will inspire the CB culture to abandon its preoccupation with "being loud" and get active in groups like REACT and the Red Cross again.

Hi Peter,

Back again to troll the hams here again? Your pal Twisty is on
vacation. But if you wanna go a few rounds, let's do it.

Hey, look what I found. Beloit, WI is not mentioned. But Grand Rapids
and Battle Creek, MI are. Wonder of they enacted any CB laws? Oh I
forgot..."there is no CB interference problem" sez Twistedhed, "it was
all part of an anti-CB campaign cooked up by jealous no code hams",
LOL....

-A

CONGRESSIONAL RECORD
Thursday, June 22, 2000
106th Congress, 2nd Session

Statement of Senator Carl Levin
Regarding Introduction of Legislation to Authorize the Enforcement by State and Local Governments of Certain Federal Communications Commission Regulations
Regarding the Use of Citizens Band Radio Equipment

Mr. LEVIN. Mr. President, I am pleased to cosponsor legislation being introduced today by my friend from Wisconsin to address a problem that is unique to certain areas of Wisconsin and Michigan.

In the cities of Grand Rapids and Battle Creek, Michigan and in several Wisconsin communities, certain individual Citizens Band (CB) radio operators are using illegal equipment of a capacity which interferes with the home electronic equipment and telephone service of their neighbors.

As a result, these neighbors are forced to buy filters in order to screen out the interference, and in some cases the interference is so extreme that the filters don't even work. There have also been complaints that some of these "illegal" CB broadcasters are using profanity which is disturbing to the neighbors and interfering with legitimate use of CB radios by truckers and others.

The problem is exacerbated by a lack of Federal resources to stop the problem. In recent years, due to budget and staffing cuts, the FCC has decreased its enforcement efforts. The legislation being introduce today would authorize local jurisdiction to enforce the FCC regulations regarding use of citizens band radio equipment, while maintaining the FCC jurisdiction over the regulation of radio services.

The bill provides for an FCC appeal process available to any person who believes they are adversely affected by local enforcement action. FCC does not object to this approach or to this legislation.

Mr. President, this legislation offers a simple solution to the inability of the FCC, due to insufficient resources, to put a stop to illegal CB equipment use in parts of Michigan and Wisconsin. The legislating would allow local officials, who are more familiar with the specific problems and complaints in their areas of jurisdiction, to be authorized to enforce FCC regulations regarding the use of CB radio equipment. The legislation has the strong support of local government officials in the Michigan communities where CB interference occurs.

An identical bill has been introduced in the House of Representatives. I hope this legislation will be enacted in an expedited manner so that local officials will have the ability to stop the use of illegal CB equipment that is interfering with legitimate CB use and disturbing citizens of the impacted communities.

Hey look what I found.

http://www.radio.gov.uk/topics/enforcement/prosecution.htm

Pirate Radio and CB leads the enforcement actions in the UK. Fancy
that.

Also:

http://www.radio.gov.uk/topics/enforcement/restrict.htm

The Wireless Telegraphy (Citizens' Band and Amateur Apparatus)
(Various Provisions) Order 1998 applies to Citizens' Band radios
operating in the frequency band 26.1-28MHz which do not conform to
Agency specifications or UK Radio Interface Requirements.
CB radios which do not conform to Agency specifications or UK Radio
Interface Requirements can cause serious interference to other radio
services, including TV reception. For more details about CB radio see
RA 246 Citizens' Band Radio Information Sheet.

Of coarse I am Canadian I have answered other posts of yours with a Canadian flavor.
The guys at Industry Canada are a good group. If you ask nice they will take you for a tour. I did this a few years ago and had a look at the radio tracking system. They can track any radio in the Lower Mainland in under 6 sec. including CB and cell-phone. The antennas that they use are remote and the signals and controls are shipped through the phone lines so they can even monitor week transmitters in Abbotsford or North Vancouver. All of the radios are computer controlled including the telephone pole radios that they can set up on any street. When I was in their they had the top of the line Icom wide band receivers including in the pole mounted box that I was shown. Also all of the scopes and station monitors needed to see if a radio was chucking spurs. Anyway I seem to have gotten of topic a bit what I wanted to say was that I can't recall seeing any antennas on the roof of their building nor when they were down town but you can look and let me know.

CB Radio for Emergency Response?

Because of the illegal high-powered CB operators out there, CB radio
is less than ideal for true emergency communications.

You and all Canadians are VERY WELCOME down here in my book!!!

Ebay is just anal (and paranoid) about things, just like some of the folks on this board and in this country. That's why I bought my Yupi scanner in Canada, it's not sold here due to the restrictive stupid, now very irrelevant scanner laws.

I for one, am very happy to have such a fine country next to us as Canada. You are great friends and I for one am glad to have you "up north".

Note: The planes did take off from US airports, fooled our so called security systems, the terrorists were trained in the required flying skills in our schools, they lived here for several months in our cities and used our banking system. Canada was just one of the many stops on the way for them. I see no blame on your part...

Terrorism is a world problem and it takes INTERNATIONAL teamwork to minimize it and it's effects. Pointing fingers at one another isn't gonna help anything.

Geez, after all you gave us John Candy, Shania Twain, Neil Young, Bob / Doug McKenzie, Kids in the Hall and SCTV. (also North of 60, a favorite of mine) Even one of my favorite guitars is Canadian made (Seagull). Just for that I'm forever indebted.

OK, I'll overlook Anne Murray for now...

TNX,
-bc
Your neighbor down south from the "real" city of Vancouver in Washington... :)

P.S. Sorry for the acid rain guys... Blame the greedy ones down here...

Aaron,

This type of radio is common in the EU and UK.
The PLL is often designed to cover all the 27MHz allocations, not only in the EU, but also places such as Australia.
The idea would have been to reduce the component costs by making large numbers of just one type of PLL, in place of one for each country. They can also switch between AM and FM, so long as the complete radio has the circuits for both.

In the EU and UK, this is not a problem as there is no law against a PLL having the capabilities, so long as they are not available to the user on the built radio.
But, I believe that this would cause problems with the USA rules. Didn't the FCC tighten PLL rules many years back?
Personally, I cannot see him getting approval as the radio may not be type approved in America.

Does that help you, Aaron?

Regards,

Brainbuster.

I have been on here just over a year, and have seen more than
one change already. How long is a "few years" to you?

==
> So now are you going to put me back in your killfile because
> you can't answer the questions I put to you in the other thread?
==

You must be sat on the edge of your seat, desperately waiting for every
reply from the people you consider "keyclowns". Yes, the group and
it's users ARE your life, you must have nothing else to live for.

I do not get the amount of time for the Net that you clearly do, so I do
not read all the messages and do not have time to "surf" during the week.
With having a family (and a life off the Net), I do not get much time at
the weekend either. My family are certainly more important and
deserving of my time than you or this newsgroup.

You would love to get me into one of those all night newsgroup argument
marathons that you seem to love so much, but it just isn't going to happen.
You will just have to learn to have patience and not to expect everyone
to be sat waiting for your every word... you just don't rate that highly.

It is obvious that, not only do you like to start arguments but, you will
try using psychology to keep someone arguing with you.
What you really mean is:
"Please don't killfile me, I love to argue".

==
> Go ahead; it's not like I don't expect you to run away from
> a few petty facts.
==

What, like blocking you before was running away from the fact that you
claim to have respect for terrorists who murder 1000s of innocent people?
It's not like I don't expect you to say anything if you believe it will anoy

people and start arguments or keep them going. Like that "respect"
claim just after the attack... timing is everything, right?

==
> > and doesn't the Tibetan
> >translate to "foul snowman".
>
> Not quite,
==

My Collins English Dictionary says:
Yeti: same as Abominal Snowman
Abominal Snowman: Translation of Tibetan "mtohkangmi" foul snowman.

Although World Book Millennium says:
"The word probably meant all-devouring creature"

==
> And I can't imagine where you came up with a nic like 'Brainbuster':
> that's about as relavent to your personality as 'SwangThang' would be
> to Dick, or 'AmpHead' would be to Voobner.
==

Depends upon which meaning of "Brainbuster" you are thinking of.
But, I cannot argue with your's being an apt name, I'll go with WB
Millennium on that one.

Brainbuster.

> other selector swith that is inoperative as sold". This would close
> the big loophole on all the Galaxy's connexes etc right away.
==

Then manufacturers such as Ranger would modify their designs, taking out the 40 channel selector. They could also give the spare switches other uses that the user may swap to give the extra functions. But with up / down frequency contols, a band selector will not be needed although it can be useful to get there quicker.

As they close loopholes, designs will evolve to get them through. The UK took the easy route... banning ALL 10 Metre only radios. One problem was that the equipment still got through via "John down the road" etc and the Government saw no tax from the sales. Another problem was that CBers started buying the old Amateur radios, giving them access to ALL HF bands.

Yep, the Amateurs were selling their old tackle to CBers rather than scrapping the outdated stuff that no Ham would want. When it comes to money, even the Hams will sell out... CBers were giving decent money for very old radios.

==
> And unlike amps, non of these radios are made here, so they
> woud severly dry up, & most major distriutors would be out of
> the 10M radio business, less they would become a target that
> they Aren't now.
==

Don't be too sure... didn't work here. The RA ended up withdrawing the rules and allowing the stuff through.
They would also need to clamp down on Amateur radios to stop them being modified. As CB is so close to the 10 Metre band, this could be very difficult to do without putting restictions on that would upset licensed Hams.

Regards,

Peter.

"CB" stands for "Complete Bullshit". Nothing means shit on the radio. People pretty much do anything they want. The FCC can't handle the administrative duties to regulate the airwaves. That's why they have FCC rules that practically nobody obeys. You have people breaking the rules just like what people do in their cars...until they get caught. Anything goes , people can buy equipment anywhere and everywhere. It used to be a hobby for the old WW2 veterans, then in the 70's it became a fad. Nowadays you can hear anybody using it for legal or illegal uses. It's a hobby for the most part. You'll hear or meet all kinds of people on the radio. If you are interested in chatting with locals or friends ,which it was really meant for that on low power so you wouldn't interfere with local utilities or radio/tv/telephone services. If you are lucky, you might be able to communicate farther via skip. Its exciting to hear DX come in and talk with someone from another state or country. On the other hand you have idiots out there who like to key up and interfere with others and use the radio illegally. Never give out your real name, you use handles. And never give out your true location, you'll never know who's out there to come after you.
Joe PieCheech

Source record: 130694

CB is a great, cheap way to communicate and have fun.. it does not require a license, only common courtesy. Where as Ham radio requires higher cost equipment and training, any one can talk on a CB. It is low cost, reliable, fun communication. It is a great way to meet people, pass time, and keep in touch with with family and friends without paying long distance bills.

No... "slang" isn't necessary, most of it is based on old trucker talk derived so the Highway Patrol, and the "uninitiated" would not know what they were talking about, sort of like a secret language. Anymore tho, it's mostly nostalgia, about all you're likely to hear is "10-4" which means "OK" basically... just talk the way you would on a phone or in person... handles are not required.. but I think make it a little more fun.. just my opinion....

All you need is a decent playing CB and antenna, and a little common courtesy. Always ask for a break, try not to talk over people, and most of all, just have fun... that's what it's all about...

God Bless

Dale

OFF TOPIC, but a thorn in my ass. I couldn't help but reply.

Why blame Canada????

On a house, locks on windows and doors keep the "honest" out. A REAL thief will get in. Same with terrorists. If the sneaky bastards want in the US or any other country, they'll get here/there by hook or by crook. BUT, some of you may not be so ready to admit, welcomed by our own government.......government sponsored programs with their own hidden agendas. And their crimes if committed? Covered by Diplomatic Immunity.....

I was in the Air Force many years ago. An AMERICAN service woman was raped by a foreigner - ON BASE. The guys wanted to go kick this guy's ass and make him pay.The Commander simply told them, he had diplomatic immunity and if they touched him, THEY would be the ones to end up in prison. Now if that were US, we would be in prison in hours OR worse, especially in another country.

No, don't blame Canada..... BLAME THE TRUE culprits. OUR ELECTED OFFICIALS......The same ones who keep dolling out millions and billions in aid to those who wish us harm when our own people can't even afford health care. SCREW THEM.... Take care of our own who have paid into this system for how many years... CHARITY begins at home. Further more, start treating the criminals and terrorists as such instead of this they have more rights than we do CRAP, and we'll all be better off.

I'm sick of this Civil Rights CRAP of they have "rights". Yeah, what about all the people these scum bags killed innocently? What happened to theirs? I say wipe em all out like the disease they are........The terrorists who are in "jail" are getting a free meal, medical and a roof over their heads. More than a lot of our HARD WORKING citizens can afford in a lot of cases. Especially the seniors who have paid into our system and have to choose between medicine to live and food or housing. They keep saying how BROKE our Social Security system is.. WELL GEE!!!!!!!!!!! Instead of a few billion TO Afghanistan or some other God forbidden country, how about INTO SOCIAL SECURITY!!!!!!!!!

No people, don't go blaming Canada..Instead focus the energy where it is really needed.... STRENGTHENING OUR USA against all the CRAP......Starting in WASHINGTON.

This country started with a struggle, basically with nothing more than the clothes these people had on their backs. IF this country can do it, so can they. THEY are the worst case scenarios when it comes to WELFARE! The leaders get it, the people are lucky to see it. Let those countries struggle

like we did. IF we did it - so can they. You have to let the lazy bastards get up off their asses to do some thing first!

You know, it amazes me.......THINK ABOUT IT. When a Earthquake hits anywhere or hurricane, whatever....we are so quick to send food, money (BILLIONS) to them. And NOT one word is said about "LOANS" OR PAY BACK. When WE get hit, we get shit for asking for it from our own, let alone others. AND to rebuild "our" homes and businesses? LOW INTEREST LOANS!!!!!!!!! How fair is that?

Want to fight terrorism????????

STOP THE FOREIGN AID AND OPEN INVITATIONS! START LOOKING OUT FOR U.S. {US}.

> distortion successfully fakes out a slow-attack AGC.
>

Dick,

I never said it was a "clean" amp. Because class "C" amps are biased at
cutoff above the zero crossing point of the waveform, if a low enough
drive level is applied, a great majority of the dead key is at or
slightly above cutoff, which results in poor gain of the carrier, while
the modulation peak is in the high gain area. This non-linear
amplification results in more of the modulation envelope being

amplified, then the carrier, which give that "swing" that many guys are misled to believe, is desirable.

Is it distorted? You bet! Does it splatter? Is the Pope Catholic? But it sure moves that wattmeter forward on modulation peaks, and that's all many people care about. And these are the same people who claim to be smarter than hams. Makes you wonder.....

I really don't care what you do. If you killfile me after you have painted yourself into a corner, then the reason you need a killfile is obvious -- you words can't hold up to any logical scrutiny. If you -don't- killfile me then you have some really tough questions to answer. How about answering them instead of whining about killfiles?

>claim just after the attack... timing is everything, right?

Ba-a-a-ah ba-a-a-ah ba-a-a-ah! Believe what you are told and follow the herd like the rest of the sheep.

I said that I have respect for anyone that has the courage to stand up and fight for what they believe is right. I also said that I believe that the morals of these terrorists were truly fucked up, but I still respected their courage to do what they did (courage = ability to face their fears). That's all. Nobody can tell me that these guys did this without any fear to overcome.

From OUR perspective they seemed like cold-blooded killers, but from THEIR perspective they probably thought that they were doing the will of Alla (and even Muslims know how people can be misguided into doing terrible acts in the name of religion). Unless you have been to that part of the world and have tried to understand some of the reasons these people hate Americans so much, you really can't say shit except that they did something really bad. In their society, men, women and children are killed just for living on the wrong side of the tracks. That is how they grew up and that is what they believe: None of their oppressors has ever made any distinction between military and civilians when their people were killed: you can't expect them to grant us the courtesy of protecting our innocent when that same courtesy has never been given to them.

And this is not an excuse -- it's a reason. If you can't understand the culture, don't criticize someone that can.

Like I said, I can respect courage, which is something that every person must face at some point in their lives. Their ability to overcome that fear deserves more respect than I can give for some of

the whiny nameless twits on this newsgroup that make every excuse in the book to abuse the rights granted them by the best country in the world, yet don't have the balls to put a name to their words. I'm sure that even you can respect that. Unless, of course, you are one of those whiney nameless twits.

Regardless, you seem to have a problem understanding what I said. It's not like I didn't explain it about a hundred times already; maybe my comments were posted at the wrong time of the month for you. I hope you know that you can ask your doctor about hormone replacement therapy, and there are plenty of over-the-counter medications to relieve monthly bloating and cramps. Maybe you should look into some of those remedies.

One nice side benefit of the sunspot cycle is that it drives away many
of the idiots, who tire of the high noise levels. But like chemotherapy,
it also kills some of the good people as well. Last night I took a spin
of the dial, and heard practically nothing. There was evidence of a
small amount of skip, but nothing above S3, but there were no locals at
all. Even the "echo-box-roger-beep" channel was dead, as was the SSB
group that I used to check in with on 36 LSB. The next few years will be
interesting. I'll see who rises up from the ashes, and maybe there will
be some hope.

> I sure wish they'd bring licensing back to the CB. :-(

I doubt that licensing would solve any of the ills that affect the CB band. Those who blatently operate illegally wouldn't even bother getting one (That's what it became like in the late 70's-80's, even when they dropped the price down to $4 and then free). The amount of revenue that the FCC would get, from those that do get the license, would barely pay for the processing costs, and leave little extra to put toward enforcement of the rules.

Having a CB license would tag you as a "CBer" much the same as a ham license tag tags the ham, and would clarify some of the classification of certain rule infractions. You could then technically call a freebander an "illegal CBer". That would be even more incentive for the hardcore freebanders to NOT get a license, unless, of course you multiply the fines by a factor of 10 for anyone that doesn't have a license. But it still won't help the FCC catch anyone.

> making radios.

That part is absolutely true. The new radio market will dry up in the US. But CB radio will still be legal in other countries, and manufactureres would still offer those bogus "10 meter radios" as well. They can't seem to control the import of illegal radios now (not to mention drugs and illegal immigrants), it would take some serious commitment to put a dent in the radio import now.

> No problem at all finding 'illegal' operators, they ~all~ are.

MANY are illegal now, but the sheer volume of operators, coupled with the meager amount of money allocated to the FCC to cover this effort, and you can see why we have the mess that we have now let alone trying to shut it down completely. In order for an effective sweep of the CB band to be effective, the FCC would have to get a whole lot stronger. That won't happen unless congress frees up more money. And THAT won't happen until someone makes a strong enough case that purging the CB band is a high enough priority that it could justify shifting the money away from other programs like education and defense (or raising taxes!). Somehow, I just don't see it happening.

> Introduce another bill such
> as PL-106-521, making it enforceable from local levels.

This might work, but then you open a whole lot of probable cause and right of privacy issues, not to mention complaints from hams and other licensed operators who would undoubtedly be hassled in the process. Effective disguise antennas, and covert tactics would nullify much of the local effort without obtaining search warrants. And the real irony is that many "CBers" would end up being hams, who would get away with having antennas.

Sure, and our government could be overthrown by Osama Bin Laden and turned into a Muslim fundamentalist state and we could all be killed for even saying the word freedom. Anything is possible. The real question is, Is it likely? And taking into account all of the issues, I'd still say the answer is no.

That's essentially correct, although you can also run a CB in a house or
a handheld version.
>

Just like any other "specialty group" there is some jargon, and
"slanguage" associated with it. Some is technical, some is just lingo.
You don't have to master it to be a CBer. In fact the people who use too
much CB lingo are usually laughed at.

>
> (2) What sort of modifications or tweaks are permitted in CB radio? Antenna
> adjustments? Power output? CB accessories?

No modifications to the radio are allowed by law. You can attach a
"power mike" to the radio, and you can run whatever antenna setup you
can construct as long as it is no higher than 60 feet off the ground or
20 feet above the building it's on.

>
> (3) What is freebanding?

When a radio hobbyist illegally modifys a CB radio, or buys an ham
radio, to use frequencies outside the legal 40 channels. It provided a
quieter channel, but it is illegal.

>
> (4) What is 11m DX?

When a CB signal is reflected by the ionosphere allowing it to travel
hundreds or thousands of miles. Normally, when the atmosphere is not
"active" a CB signal will only travel 10-40 miles depending on terrain.
Since the CB band was created for short distance communications, there
is a 150 mile limit for legal communications. Anything more than that is
considered illegal.

> (5) Why do Hams hate CBers? If CB is just ordinary communication, what would a
> Ham feel this is bad or feel superior about?

Hams do not hate CBers. But they do not respect anyone that disregards
the FCC rules.

Actually linking CB use to a serious crime is pretty easy. There's a small town just north of San Antonio call Selma. Back in the 70's they were known as one of the biggest speed-traps in this part of Texas. The local cops would sit behind road signs and nail speeders doing 56MPH. Sure it was difficult to enforce 56MPH but you had to either pay the fine or fight it in court. Most just paid the fine. CBers would, of course, tell everyone where the cop was sitting. State law (and probably federal law too) forbids you from devulging the location of a peace officer while he is performing his duty. It is also illegal to interfere with his duties. So if the cops thought that someone was using their CB to help other avoid getting a ticket they would bring in the federal regulations and also charged them with using a CB radio to aid in the commission of a crime. They'd charge them with all sorts of wild things like "conspiracy," "interfering with a police officer," "using a radio transmitter to aid in the commission of a crime...." This added felony charges to the mistimenor charge of speeding. This went on for a couple of years.

At least the ARRL saw fit to enter a loose affiliation with REACT, not too long ago. If you start the journey not believing, you've already lost. Of course, cautious optimism is warranted as well. You don't want to be the guy who jumps off a 50 story building in an attempt to fly and proclaims, "So far, so good" as he passes the 10th story.

Still, folks like Ort, Dixon, Kneitel, and the decent ops on 11-meters who take the time to pen a few words to their state and local reps will be the ones who hopefully make the difference.

Sorry Kevin, it's not against federal law or for that fact most
state laws to inform people that a peace officer is using a radar gun to
enforce speed limits. To interfere with a peace officer while he is
performing his duty, he has to actively be engaged with an incident, so just
telling people that he is using
radar ahead of them is not interfering with his duties. If he
was stopped with a speeder and you came over and started to
interfere with the traffic stop, that would be hampering his
duties. The ACLU would've had a field day on the
you scenario described, stick to radio legalities kev,
you do much better.

If the FCC wanted, just like amps they could actually amend
their
rules rather quickly. the "No amp shall be imported or marketed
capable of operation on 24-35Mhz" is a REAL, Actual FCC regulation.
They could easily put in a " No HF Amature Radio shall have a 40
channel selector switch" , memories in Banks of 40ch, or a Band or
other selector swith that is inoperative as sold". This would close
the big loophole on all the Galaxy's connexes etc right away....."
==
>BRAINBUSTER WROTE:
"Then manufacturers such as Ranger would modify their designs, taking
out the 40 channel selector. They could also give the spare switches
other uses that the user may swap to give the extra functions. But
with
up / down frequency contols, a band selector will not be needed
although it can be useful to get there quicker.....

Possibly, but this would eliminate the most Popular type
"Export rig", The CB-style "40ch" radio. Look at Ranger. They make
perhaps 90% of all export rigs (Galaxy, Connex SuperStar, Mirage,
Ranger ect..) & Only offer ONE "non 40ch" design (the 2950/70). I
Believe the Bulk of Truckers, & CB guys would Not opt for a "non-40ch"
design, just like they don't now. There will always be some that will
buy a $900 Kenwood, or a 2950, but these are a drop in the Bucket
compared to all the Connex, Galaxy, NorthStar ect buyers. ..... (read
below the next quotes for another thought.....)

BLASTER QUOTE:.."and unlike amps, non of these radios are made here,
so they
> > woud severly dry up, & most major distriutors would be out of
> > the 10M radio business, less they would become a target that
> > they Aren't now.....

> BRAINBUSTER WROTE:
> "Don't be too sure... didn't work here. The RA ended up withdrawing
the rules and allowing the stuff through.
They would also need to clamp down on Amateur radios to stop them
being modified. ..... Regards, Peter."

1st, My idea was not to close every single loophole, or even
address Amateur or "non-40ch" 10M rigs. Just an idea get rid of the
40ch Exports, the ones that sell the best. My guess would be that the

average trucker would buy a Uniden or A cobra in the Truckstop if the Galaxy's & Connex's weren't there, rather than hunting down a Complicated $900 Yaesu or even a LCD 2950...
2nd, We have a better model alredy here. Back about 1995 the FCC created new rules that made scanners with US 800Mhz cellular portion illegal to import or market, & wrote the rules to eliminate the "hide the freqs in the radio & cut diode" mods.
It worked, & They Are GONE from the US Market. Even though Uniden, AOR, Alinco ect builds full the 800 scanners for Europe & elsewhere, They do NOT get into this country in any "wholesale" quantity, & NO US Distributor has stock of them (Even the ones that distribute export rigs, amps & other scanners!).. Sure, The occasional "hardcore scanner buff, (just like the few truckers running a $1000 HF rig) order the scanner from Europe or Canada, Pay $500 Delivered for a Bearcat model that sells for $199 in the states, & has no warrany, but the law otherwise mostly worked. Many people are simply buying these exports rigs to use as simply a 40chn CB, instead of a 148 or Grant or Midland, Simply because Truckstops, internet& mail order places ONLY offer them, or "push" them. I think the above proposal would take a real Big "make a difference" chunk outof the Export CB market.

1631. OT Especially for Moparholic

Mopar,

By your sig, I assume you like Chryslers, etc. I had a bit of fun last Friday---may
do it again today. A ham friend of mine has a 1949 Dodge Coronet in excellent
shape. It has never been restored, but shines like a new penny. Except for
a couple of leaks around the windows (rubber needs replacing) it is basically a very
solid "used" car that he enjoys driving around on occasion. He had a stroke some
time ago and is recovering. While he was laid up, the Dodge didn't get driven be-
cause his wife was "afraid" of the fluid drive (Gyro-matic I believe they called it).
Last Friday, he asked me to come over so he could take the car, get it washed, fill it up with gas, and give the old gal some exercise. The car is solid black, and
somewhat resembles the car in the movie "Driving Miss Daisy"....so he named the
car Miss Daisy. Driving the car was an education for me--first time I had ever
driven Chrysler's semi-automatic transmission. And it was easier than I thought.
I DID keep wanting to push in the clutch (which isn't necessary), and I found the
car surprisingly quiet and easy driving. Even without power steering, that big 3-
spoked steering wheel made it pretty easy to turn, and I didn't have to wrestle it
like you'd think. It rode very well and was pretty tight with few rattles. The little
6 cyl coupled with that fluid drive is no rocket at takeoff, but does so with dignity
and grace simply by leaving the tranny in "high" and driving away. At about
20-25 MPH, let off the gas and listen for an audible "clunk" that signals that the car
has dropped into high gear. You may be familiar with the fluid drive, but if not,
I found that it works like this: There are only 3 positions on the column shift: high,
second, and reverse--all of which are in the usual place on the shifter. There is no
"Low" position like a three-on-the-tree. If you put the car in "second",

there are 2
gears: low and second. This is to give one a little better "git-off" or to pull off on a
steep hill. So if you have to start off on a steep hill, with the shift in "second", the
car starts off in low gear. At about 15 MPH, you let off the gas and listen for the
"clunk", accelerate to 25 or so, press in the clutch, and shift to "high" like you would normally. Then speed up to 30-35, let off the gas, and "clunk", you're in
high gear. Even at 53 years the old Dodge worked just as it should, and I was impressed with it. I thought driving it was fun, and we got lots of waves and stares. When I was a kid, I thought of those old 40's Chryslers as "stodgy" and
"stuffy". I always pictured drivers in Dodges with homburg hats, or imagined that
Harry Truman was driving one. And , actually, he DID. He had 2 1941 Chryslers that Chrysler Corp just got thru refurbishing for the Harry Truman Library.

Anyhow, I had a ball all last Friday afternoon "Driving 'Miss Daisy'"! And my old
friend enjoyed riding "shotgun" talking on the radio.

Damn Frank! You finally said something I can agree with.

Now, if we would let Israel do their own dirty work, much of the heat would be taken off our backs. They are no better than those they oppress. They went in after WWII and took over land that was not theirs. We don't need Israel for anything, much less a diving platform for the mid-east. We've got land and sea based cruise missiles to project whatever might we may need to in that area.

Like you, I'm not saying I agree with what the terrorists did, *but* I can see why they did it. It just doesn't correlate with the beliefs that we have in this country, and that makes it hard for many here to comprehend.

Damn Randy! You just got yourself de-plonked!

You know, I keep listening to these people that ask the same old and
stupid question, "What country do the Palestinians come from?" If
there is one big issue that gets neglected in the news (even by that
"fair and balanced" news network) it's the fact that Israel is
actually occupied Palestine! It was taken from them using the very
same terrorist tactics Israel now condemns: car bombings, terrorist
raids, civilian massacres, etc. And the US sponsered this! If anyone
can't understand why the Americans are so hated in the region, they
really need to do a little bit of research on the history of the
Palestinian people -- and not just from the heavily-biased history
books you find in the grade schools.

Like it or not, wars do settle things. Von Clauswitz to the contrary they
are not diplomacy by other means. The Palestinians managed, with some

help from their friends, to lose 4 wars including a major piece of treachery in 1973.

Tell it to the city fathers of Troy.

Yes I do, but one of the core reasons that law exists is the
prevention of forest fires. And THAT can land you a fine of several
-hundred- thousand dollars, cause the deaths of many people, the
destruction of millions of dollars worth of property, etc. So you can
take it to any extreme you like.

The point I made in my page was that Spokane has adopted and warped
that law into a crusade against smokers, and now has little to do with
littering OR fire prevention. And because of its poor wording it can
be used as a means of harassment. Not cool.

True, but it's not easy to stand up to any country that is backed with
US funds.

>Tell it to the city fathers of Troy.

The US is no pillar of honorable warmongering, or have you forgotten a
few little incidents like the Bay of Pigs, Laos, Panama, etc. There
are examples like this all the way back to the Banana wars, and
probably even earlier. Or take a look at some of the internal
conflicts with the natives -- after thinning their numbers down to a
small and passive few, they herded them up and imposed treaties that
were never honored. Then try counting how many wars has the US fought
since 1945 that have been declared by Congress. Korea was a draw,
Viet-nam is still being debated, Beirut was a joke, Grenada was barely
a conflict, and Iraq was a turkey shoot but they missed the turkey.

My personal favorite is Panama: Carter signed over the canal with the
intention of building a new canal through Nicaragua, but those plans
turned sour within a year because the US-friendly dictatorship was
overthrown. Reagan and Ollie tried to get it back with funding from
secret arms trading in Lebanon. But that failed when Nicaragua held
free and open elections (and if I remember correctly, they voted in
women for both president and vice-president!). And I'm sure everyone
remembers the Iran-Contra hearings. So the US had to take back the
Panama canal, which they did under the umbrella of the drug war.

So do you still want to cast stones?

Landwhale, you had better stick to something you know, since State Laws are
far from your Forte. Go to the alt.law-enforcement NG and ask this question.
It is most certainly against state laws and local laws to obstruct justice
whether it be you flashing your lights to warn other motorists of a speed
trap, or telling them on a Cb it is no different. This is most defiantly
against the Law, whether you chose to accept the fact it is no different
han you helping someone else who broke a law. The ACLU hasn't a leg to stand
on this happens everyday in our country. You better research before you post
and tell Kevin to stick to something he knows. you are 100% wrong.

Whats to stop Illegal Cbers from using there Icom 706's there? or there
other modified Ham radios? Your a disgrace to the ham community.
What so hard about them squeezing the mike? They already modded the radios
to talk on 11 meters, VHF you have put forth some lame excuses
you are a true Illegal Cber with a entry level No-Code ham license, god your
a putz.

Landshark,

Illegal CB is not a legitimate political/moral social struggle. To
even try and compare the two is ludicrous. It's like a drunken,
bar-fighting Hell's Angel claiming that he's a "civil rights
protester". The folks you mention above (feminists, unions, political
parties) carried on organized protests in full public view and worked
through the legal system in an effort to bring about change. I'm not
sure exactly what it is you espouse (the right to sell and use RF
power amps on CB?) and that may be part of your problem at the moment.

There is a difference. Since the 1930's virtually all commercial ham gear has come off the shelf capable of transmitting out of band. A twist of the VFO or a substitution of a crystal and suddenly you're on (for example) a military frequency. However they were not disguised as license-free hobby radios or marketed as something other than what they were. Even today, the big three's (Icom, Yaesu, Kenwood) gear is not intentionally designed and marketed for the sole purpose of being used illegally -- unlike the phoney "10 meter export" radios -- the majority of which are marketed to, sold, and used by CB'ers in the USA.

with channel 9 for emergencies?

Used to be ch9. Police used to monitor ch9 but not anymore. Most states if not all have signs "police monitor ch19" nowadays.

Has anyone seen a sign saying police monitor(10m or 6m or 2m)? Other then poland:)

The point is... It's easier to say you are doing something good by searching well behaved people and stealing their right to self-defense than it is to catch terrorists bent on the destruction of your freedom.

I don't want to even get into America vs. Canada. The policy of killing freedoms is bad-wrong no matter where you go. Also, it seems you get our news (propaganda) but all we ever hear is hockey scores. Is censorship at the top of the list? If so, then we understand that you may be under duress as a policy spokesman. You have our sympathy.

Jim.

It ain't a whitehat-blackhat thing like an old cowboy movie.

It is just that if you pick a fight and lose, you are deservedly in the
doo-doo. Given the history, there is no valid Arab claim to anything
based on anything prior to 1967. The same bunch that wants to give us

crap about Ramadan attacks on Yom Kippur; few at the time would have blamed Israel from pushing them right into the sea as they most assuredly would have done had the outcome been reversed.

On one side we have a group of refugees following a collection of corrupt bozos who came from Tunisia to take over having done things like push old guys in wheelchairs off ships. The kindest thing even the U.N. can find to say is that they are no worse than a lot of the Third World. Arafat is a serial bungler, pure and simple.

Not to say the Israelis don't have a few problems. The internal contradiction that is Israel would make it impossible to be a Jewish state, Biblical Israel, and a democracy at the same time without a 'final solution' to the Arab problem. One wonders if the civil war that would result from total Arab withdrawl might not be worse than anything they are capable of. And what Israel has done to the Arabs who are Israeli citizens should not happen to a stuffed goat.

The world already knows what the settlement will look like: withdrawl to near-1967 borders, at best symbolic return, restricted control in Arab Jerusalem, etc which Arafat could have had years ago but overplayed his hand. He is a serial bungler.

The only question is how many people will die for Arafat's place in history.

Pfui.

>CBer? Or can one use ordinary conversation and still be a CBer? Can CBs be used
>stationary,outside of your vehicle? Do you know anyone that uses it that way?

CB is Citizen's Band radio. It's a radio service established to
provide short-range 2-way radio communications utilizing low-power
equipment. In the US, CB'ers operate under the auspices of the
Federal Communications Commission (FCC), which has issued a blanket
license of operation to all who own a CB radio. Contrary to popular
opinion, these are not UNLICENSED operators, but are part of a BLANKET
operator's license issued by the FCC.

>(2) What sort of modifications or tweaks are permitted in CB radio? Antenna
>adjustments? Power output? CB accessories?

No "tweaks" are permitted to the transmitter. Unlimited adjustments
may be made to the receiver. Noise making devices utilized for the
transmission of sound effects, echo generators and such are not
permitted.

>(3) What is freebanding?

A criminal activity whereby the operator of transmitting equipment
transmits a signal on frequencies where he or she is not licensed to
operate. This activity often results in interference with Amateur
Radio operators, the military, and civil authorities.

>(4) What is 11m DX?

A criminal activity whereby the operator attempts to establish contact
with a station outside of the legally allowed radius of operations (in
the us, approximately 155 miles). Such activity often involves
illegally modified transmitters and/or illegally operated amplifiers.
>
>(5) Why do Hams hate CBers? If CB is just ordinary communication, what would a
>Ham feel this is bad or feel superior about?

Ham's don't hate CBers. Many hams are also CBers. Many hams "hate" people who operate CB's utilizing illegal power, with poor operating practices (as in noise/sound effects, carrier throwers, key down clowns, disrepectful treatment of others), or outside of the 11 meter allocation of frequencies. I personally dislike these same kind of operators. If you can't keep it clean and legal, and treat the rest of the folks in the air with some measure of respect and kindness, then you might as well just get rid of your radio. Unfortunately, there seems to be a growing number of CB operators who feel just the opposite...

1667. Uniden AM/SSB Radio

Newsgroup: rec.radio.cb
Date: 2002-07-19 23:14:13 UTC
From: jdavecobb@aol.comatose
Message-ID: <20020719191413.13591.00001418@mb-ma.aol.com>
Source record: 130646

I'm considering a new Uniden PC78XLTW model radio. Any opinions on this model?
Thanks in advance.

Landshark Said: " Sorry Kevin, it's not against federal law or for
that fact most
state laws to inform people that a peace officer is using a radar gun to
enforce speed limits. To interfere with a peace officer while he is
performing his duty, he has to actively be engaged with an incident, so just
telling people that he is using radar ahead of them is not interfering with
his duties."

I say he is wrong I am not talking about using a CB radio, If you flash your
headlights to warn oncoming motorists that there is a policeman
and he is running radar yo can be ticketed, of course a policeman would have
to see this. So yes informing other motorist's of a policeman using radar
is absolutly interfering with his duties according to there laws. Go ask
your local Cop.

1669. help needed, CB antenna solution?

Newsgroup: rec.radio.cb
Date: 2002-07-19 23:51:08 UTC
From: Simon Bussey <s.j.bussey@GOAWAYSPAMhw.ac.uk>
Message-ID: <0C1_8.10849$Fm3.9767@news-binary.blueyonder.co.uk>
Source record: 130698

Hi,
I've moved into a new flat and i'm having difficulty with where to place an antenna. The room where the antenna needs to have access is the top floor where the loft has been converted. What I have it an angled ceiling which is the roof with a series of sky windows (on the angled roof at about 45 degrees) Outside of these windows are surrounded by roof tiles. My problem is how can I setup an antenna here?!?

My one thought is to try and use a 'serial boomerang' antenna which is a small element with a single groundplane angled at 45 degrees which is designed to go on the sides of walls etc.. but I don't know how it could be fitted to roof tiles!

Thanks in advance for any help
Simon

Gunslinger. Even though you're merely trolling to see how many hams you can tweak with your BS, I'll respond. I've already answered the question for you and done it quite well. I'll reiterate: corruption in government does not give you the right to selectively ignore laws. If it did, people would have stopped paying their taxes long ago.

Dave,
I agree, it isn't very likely to happen. The
point was, though, that it certainly can happen,
and wouldn't really be that difficult. All it
would need is sufficient justification, or reason,
and if 'CB radio' is perceived to be nothing but
a bunch of people who don't follow the rules...

Simon,
Does the window frames have space for a
'bulkhead' connector (they look like a long
'double-female' connector)? If so, simply
put a 'bulkhead' connector in the frame work
of the window, connect the antenna to the
out side end of the connector, then run a
feed line from the connector to the radio.
These things may have another name in the
UK, but shouldn't be impossible to find.
If that doesn't work, you could always
replace one of the window panes with plastic.
'Doc

Kevin,
Telling someone that the local cop is hiding behind the billboard over by the Dairy Queen, is not interfereing with a police officer in the performance of his duties, in ~any~ state. It is also not a violation of any federal statute. I would love to have a police officer charge me with something like that, I'd never owned a city before. Wonder what you could get for a whole town?

> I welcome any opinions on a Grant.

Uniden Grant XL is just like like the old Cobra 148's. I have several and love them. I also have a President Grant 10 meter radio that I am also pleased with. Almost any radio with SSB has better performance than a plain am radio.

Good luck and have fun
Tim

I'll agree with Frank & Randy.
Let Israel do what they have too, they are by far the
strongest country in that region and have nothing to
fear from anyone else near by. They are (IMHO)
doing the same things the Germans did to them in
Warsaw, herding the Palestinians in to small regions,
making them go through check points just to go a few
blocks, Razing entire villages to the ground, detaining
and torturing people (innocents, some not), making
them live in a sort of ghetto, like in Warsaw from
1939 to 45.

Yes, your reputation of arguing there is well known

> It is most certainly against state laws and local laws to obstruct justice
> whether it be you flashing your lights to warn other motorists of a speed
> trap, or telling them on a Cb it is no different. This is most defiantly
> against the Law, whether you chose to accept the fact it is no different
> han you helping someone else who broke a law.

So pulling over for someone speeding in your lane, by your
definition is breaking the law, by letting him pass.

Please cite that law (California), your fond of that statement.
Cite the law that says you can't hold up a sign along
the side of the road saying "Radar trap ahead, slow down"
same thing as the cb.

> the ACLU hasn't a leg to stand

Really? You might want to go to their site.

> on this happens everyday in our country. You better research before you
post
> and tell Kevin to stick to something he knows. you are 100% wrong.
>
>

So coming back from Solvang Ca. a couple of weeks ago, I was hit by
radar, my detector did it's job. I then called my friend
a few miles behind me and warned him..... I was breaking
the law by making a phone call now? Yeah, ok.

You just can't hold a civil debate without throwing
out some sort of insult, man it must be tough being you.

Have fun,

Landshark

None of the victims I mentioned were pedestrians. But there have been
pedestrians killed by speeders as well. If you are suggesting that it
is always the pedestrian's fault when they get hit then you are
ignoring not only many of the possible scenarios of such an incident,
but the willingness of the pedestrian not to get hit or killed when
crossing the street. The next person you should accuse of stupidity is
yourself.

What public safety is between channel 40 and 10 meters? I said that
illegal CBers aren't causing problems to anyone besides themselves, as
long as they stay outta 10 meters... it's the hams with illegally
modified VHF equipment that is the real danger.

My suggestion would be to blockade the entire region and let them duke it out between themselves without any interference or assistance from outside parties. Maybe then they will figure out how to coexist peacefully.

So the fact that a "real" HF ham rig can be modified just as easily
(if not easier) as these "export/10 meter" radios doesn't bother you?
There's lots of "Freebanders" running high priced ham rigs. Do you
really think they just bought them to talk on the "Freeband" or do you
think they might be hams that talk on ham freqs as well? Why haven't
the companies done anything to keep hams from being able to modify
these radios? Rat Shack did it with their last 10 meter rig.. they did
it with their 2m and 70cm HT's and mobiles... why can't Icom, Yaesu
and Kenwood do it?

Hams are licensed for certain bands. If they operate beyond those
frequency limitations they are just as illegal as if they didn't have
a license. The big difference here is that hams are allowed to modify
any equipment -provided- they can abide by the rules, i.e, operate
within the limitations of their license. But a radio designed with the
obvious intent of being used where it shouldn't, and sometimes even
marketed as such, can't be considered a 'real' ham rig.

No. Amateur gear does not require type-acceptance and never has. CB
gear does. Hams are allowed to build, modify and operate their own
equipment. CBers are not. By and large, hams have not abused their
privileges. CBers have.

>There's lots of "Freebanders" running high priced ham rigs. Do you
>really think they just bought them to talk on the "Freeband" or do
you
>think they might be hams that talk on ham freqs as well?

If they are hams, they risk losing their licenses and paying large
fines. A look at the RAIN report shows that enforcement action against
these type of people is happening now more often. Apparently a number
of hams whose licenses allow them vhf-only privileges figure they can
get on HF by "freebanding". Pretty dumb, I'd say. (You don't know
anyone who fits that description, do you?)

>Why haven't the companies done anything to keep hams from being able
>to modify these radios? Rat Shack did it with their last 10 meter rig
>.. they did

>and Kenwood do it?

If $2000 Yaesu FT1000MP's and Icom 756 Pro's start selling like
hotcakes in truckstops, then perhaps the companies would be compelled
to do something. But both you and I know it's the phoney '10 meter'
radios that are aimed at the CB market being pushed by unscrupulous

retailers that are at the root of the problem.

I could be wrong but it almost sounds as if you are trying to scare/blackmail law-abiding hams into silence by insinuating that if illegal clip-and-transmit '10-meter export' CB radios are unable to be manufactured, then it will somehow trigger the FCC to enact type-acceptance rules for real, legitimate ham gear.

Ain't gonna happen.

> and Kenwood do it?

There *is* a reluctance to change that, and a reason FOR making the radios
that way. Often these HF radios are used in different services in different
countries.
The front panel may be different, but the circuitry is the same. It has to
do with
cost. If the companies had to make a completely different version of the
same
basic radio for 100 different countries, it would become prohibitive. I,
for example, use my IC706 on certain military and government frequencies.
Yes, I
have authorization, and FCC has no authority over that particular operation.
In
that case, I am able to use the same radio for Amateur as well as military
and emergency comms by adding a high stability oscillator offered as an
option by
Icom. If I had to purchase, say, a Motorola Micom II HF radio at $1500, I
wouldn't be able to do so, lots of other volunteers couldn't either, and the

volunteer program I am a part of would suffer. As it is, soon I will have to
buy some more VHF equipment because the VHF portion of the 706 doesn't
meet the stricter standards as of last December. It WAS nice to have just ONE
radio.

Most of the regulations governing the use of radio, including CB, were formulated
in a time when laws were more respected by the public, and it wasn't
imagined that people would challenge them by operating illegally. The unfortunate thing is
that, in an effort to counteract the illegal operations, perfectly innocent people may
have to suffer along with the guilty. Like the hams who can no longer purchase
amplifiers capable of operating between 24 and 32 MHZ out of the box? Guess
who and what caused THAT! If people would simply obey the law, there would
be no need for draconian measures that punish everybody. If on CB, operate
according to the rules and stay on the 40 channels. If on ham band, operate
according to the rules of the service. If you want to DX, have extra power and
frequencies, get the ham ticket and have at it. Seems simple to me.

Jerry

There IS one correction: Whether they are "able" to do anything about it or
not,
there is NO protection for vile, profane language either on broadcast or
two-way
radio. Some hams thought they had a 'right' to say anything they wanted and
are
now off the air. You don't have the "right" to yell FIRE! in a crowded
theater. The free speech thing has *some* limits.

I am not familiar with the Howard Stern case, but any speech that describes
sexual or bodily functions in a crude, profane way is actionable by FCC. If
Stern
is getting away with it, I don't know how. I don't listen to him, so in
that way, I
censor him from my house.

With rights come responsibilities. Unfortunately, we want ALL "our" rights whether it impedes the rights of others or not--just so we obtain the advantage.

Do you think freebanders limit there activity to channel 40 and 10 meters
are you that naive about radio?
With them buying Icoms, Kenwoods Yaesus they go where ever they like
license or not they have no fear of the FCC
It is comical that you think a freebander will limit his frequency range to
27.405 to 27.999 I hear CB guys with 757's talking about going on the Am
broadcast band
are they still freebanders? or are they something else?

> > So why in your previous post say that a non ham wouldnt be able to key
up a
> > repeater ?

> I didn't.

You sure did you specifically stated thousands of Hams only, you never said
It could be a Cber with a Modded Ham radio. You are acting like a Cber
cannot key up a repeater you also said a non ham wouldnt go thru the
trouble. And again I say what trouble is there but you state that an ex hame
would go to the trouble, why would they they are able to use almost any
frequency they want to they have a license to lose they will be the likely
target in the area. But to say a non ham wouldnt learn it is like saying you
won't learn how to post to this Ng because it is an effort.

vhfradiobuff 4eye wrote:

"Just think of the thousands of hams with
modified 2m rigs that have the ability to "Ker-Chunk" their local
police repeaters. Aren't these the REAL problems? We have someone
locally that I believe may have been a ham before because he keys up
on the local 2m and 70cm repeaters, causing all kinds of havoc. I
don't think a non-ham would go through the effort of getting a
dualband rig and learning how to use it just to cause problems. What's
to stop him from tuning that VFO up to the 150's?! Many departments
are still operating in that range!

I forgot that this was Usenet and folks will leap to correct any oversight, so I will correct myself. All RF gear must meet certain standards set by the FCC. This is known as "FCC Certification", and it was previously known as "Type Acceptance". Amateur gear is certified for use in the range of frequencies authorized for amateur operation, meaning, commercial amateur gear is not "certified" for use outside the amateur bands. This doesn't change the essential point of my previous post, since licensed amateurs may legally build,modify, and use equipment that is "capable" of out of band or illegal high power operation.....and CBers may not.

And now someone is going to breathlessly report the stickers he found on
his ricebox. The standards in question relate to receiver radiation at
HF.

I don't think that is what he was referring to. If a ham transmitter
is certified for use as a ham transmitter, it may not be used for any
other purpose (unless it is also certified for that purpose as well).

But I just had to look up the emission standards of a ham transmitter:
2.1060 outlines the certification requirements and emission standards.
The same emission standards are reflected in 97.307.

==

Not quite... It *could* lead to prosecution.
Out of interest, have you seen the number of prosecutions per year?
Compared to the level of illegal CB use, it could be considered negligible.
The fact is that they do not have the resourses to make so much as a dent in
illegal CB. One chap covering several counties, and not just for CB... all
radio use.

Before any action is taken, there must be a report of inteference. This
report must include proof that the person has already had an engineer check
it out (at their cost), details of problems and regular times of day, then
they have to enclose the standard RIS (Radio Investigation Service) fee for
investigating such problems.
As if that wasn't enough to put people off, they will refuse to deal with
inteference to any device that is not a receiver (CD, stereo, etc) or MW

(AM) radio reception.

Yes, they do some shouting and, I believe, still maintain a 100% conviction rate for those they take to court. But the number they prosecute is tiny compared with the number running illegally. At one time, with the tighter rules of the 80s, about 90% of CB users were running illegally in some way. And what were the prosecution levels... something like 30 people per year!

Locally, there is a CBer who uses illegal equipment and an amp. He inteferes with local TVs whenever he uses it. The above rules have put people off from putting in a complaint, as they would have to pay a local engineer, then
the RIS fee if they want him busting.

I am NOT saying that it is a good thing, just that it is a fact that many rules and laws cannot be effectively enforced for one reason or another. CB is not the only area where this happens, private landlords are known to break rules, even renting dangerous properties. But our "Assured Shorthold Tennancy" system makes it near impossible to enforce the laws and protect the public. There are laws against slander, but you need plenty of money to throw at it before you can even consider your rights.

But illegal CB in the UK will still NOT lead to "FCC sting operations". And the RIS certainly don't have the time or money to run "sting operations", specially as "agent provocateur" type actions can lead to an acquittal.

==
> http://www.radio.gov.uk/topics/enforcement/restrict.htm
>
> The Wireless Telegraphy (Citizens' Band and Amateur Apparatus)
> (Various Provisions) Order 1998 applies to Citizens' Band radios
> operating in the frequency band 26.1-28MHz
==

This is confusing, as it refers to CB as 26.1 to 28, when it is supposed to be 26.965 to 28MHz here. It is not the only reference to this, as a frequency allocation charts (same site) also refers to CB being from something like 26.1 MHz.

Here we go... "Fake, Fake", shouts Aagent Aaron.
Short memory, Aaron... senilty?

Would you mind replying in thread?
But of course, you would have to wait until the message you saw in your
usual newsreader appears on Google... several hours.
Using Google must suck so loud, when you have to combine it with a real
newsreader to get a decent service.

Brainbuster.

Troll the hams?
But this is a CB newsgroup, or had you forgot? If one wanted to "troll
the hams", they would go on a Ham newsgroup... not a CB one.
Did it not cross your mind that some people use this group because they
have an interest in CB?

==

==

Inteference does not neccessarily mean that illegal equipment is in use.
Legal equipment can still intefere, just as illegal equipment does not
always cause inteference.
In fact, inteference is not always linked with CB or other illegal radio
activity, I have known inteference from Taxis, Hams, and even just weather
conditions causing TV reception problems.

Brainbuster.

Well, since the FCC is capable of imposing a fine of up to $17,000 per
violation, I would think that busting illegal operators might be an
easy way for the FCC to fatten up the government's piggy bank.

But a fine one you are, while America's best are busy putting their
lives on the line you are in here saying that war is the best time to
blow off your civil responsibilities and piss on the government. Do
you really have a grasp to what's going on, or do you think that the
WTC attack was just another TV program?

Your local policeman seldom knows such fine details of the law.

On the other hand, most police (unless they are running a speed trap)
welcome reports of their presence. It slows down the traffic, which is
the primary reason they are on patrol in marked cars in the first place.

If they just wanted to ticket people, then they would use unmarked
cars.

The answer is very simple! Howard Stern has been fined in the millions of dollars for his antics on the rado show he does. Infinity Broadcasting owned his show at the time and simply PAID THE FINES.
You might want to do the math.....This is just for ONE STATION:
WXRK in New York City charges $15,000 PER MINUTE for ad time on Howard's show and they run 18 minutes of commercials per hour. That comes out to $1,080,000 PER DAY in money billed by JUST ONE STATION that his show is on. His show generates close to or even more than ONE BILLION DOLLARS in one years total billing for the stations that carry his show! Do you really think getting fined 11,000,000 was such a big deal for that show?

A short story on my opinion...

Ordered a dummy load and a D104 Mobile power mike from them. Both were on back order, so I got put on their list... (Your name stays on the list for 3-months, and if the order isn't fulfilled by then, it gets canceled...) I was never told my items were on back-order until I called a month later wondering where my stuff was; nice... I waited the 3-months for the items and nothing... Called them again. My order was canceled because it hadn't been fulfilled within the 3-month waiting period... Yippy, was I happy. I placed the order again about a month later. Again, backordered and on the 3-month waiting list. Three months later... No items, order was canceled again by them.. In total, 7-months waiting and still never got the items I wanted. It's not like it was anything major, either. I just don't see what the problem could have been that they couldn't get this stuff in for over 7-months?? Needless to say, I never placed another order with them again... This was about 5 or 6 years ago if I remember correctly...

Go with Bill's 2-Way, or Panther Electronics... Two of the best places I have dealt with.

I'm not sure that the two factions can ever get along at this point, taking into consideration the left-wing stance of the majority of both parties involved. Too much bloodshed and too many killings have occurred on both sides for that to happen in the lifespan of those that are in power. That being said, you may still have a valid point. Just letting them fight it out between themselves without interference may be the best course of action(or non-action) for the rest of the world. I don't know that will ever happen in this country though, because of the large Jewish voting community here. I doubt the Republican party would take the chance of losing votes with such non-action.

>Do you think freebanders limit there activity to channel 40 and 10 meters
>are you that naive about radio?

Again, I suggest you go update your vision prescription. I clearly stated that illegal CBers cause no problems to anyone as long as they stay between Channel 40 and 10 meters. I doubt there is an epidemic of illegal operators in other bands with the exception of the wandering truck driver venturing into the CW portion of 10m.

>frequency limitations they are just as illegal as if they didn't have
>a license. The big difference here is that hams are allowed to modify
>any equipment -provided- they can abide by the rules

Any to what end does it serve for a ham to modify their shinny new HF rig so they can talk all over HF? I understand the ability to modify radios for MARS/CAP use (for those few hams actually involved in these activities), but why doesn't anyone say anything about these HF radios and VHF radios that allow modification beyond MARS/CAP? What purpose does it solve? These are the radios that are going to be a higher risk to cause harmful interference where it matters, not some operator using an RCI-2950 on 27.650mhz...

>basic radio for 100 different countries, it would become prohibitive.

So you would have me believe that some countries have amateur band plans into the 150 mhz area? I doubt it. Most 2m rigs can be modified to transmit there with a simple mod.

>If you want to DX, have extra power
>and
>frequencies, get the ham ticket and have at it. Seems simple to me.

Actually, I do have my ham ticket. I am just playing devils advocate here... everyone yells and screams about these 'export' radios that allow people to transmit on an unused portion of the radio spectrum, but they ignore the thousands of VHF radios in particular that are VERY easily modifiable and would allow people to easily interfere on public safety frequencies. Granted, there are those bad apples that wander into 10 meters with the 2950's and 2510, but those are sure to be caught if they persist and I believe there are a lot less venturing into actually occupied frequencies than those staying within the "accepted" limits of the freeband.

>By and large, hams have not abused their
>privileges. CBers have.

AHHHAHAHHAHA! That's a good one Aaron - didn't know you had a sense of humor. Take a listen to the freeband and see how many operators there say they are using some sort of Amateur HF rig, not a '10 meter' radio...

>Apparently a number
>of hams whose licenses allow them vhf-only privileges figure they can
>get on HF by "freebanding". Pretty dumb, I'd say. (You don't know
>anyone who fits that description, do you?)

Nope, just playing devil's advocate here...>But both you and I know it's the phoney '10 meter'
>radios that are aimed at the CB market being pushed by unscrupulous
>retailers that are at the root of the problem.

Oh yeah, real unscrupulous to talk between channel 40 and the 10 meter band. No one has yet been able to name one agency that has been interfered with between channel 40 and the 10 meter band. If there is one single case involving this, please let me know because as far as I can tell, even though there are "allocations" in this frequency range, any actual activity by agencies allocated the frequencies is nil.>I could be wrong but it almost sounds as if you are trying to
>scare/blackmail law-abiding hams into silence by insinuating that if
>illegal clip-and-transmit '10-meter export' CB radios are unable to be
>manufactured, then it will somehow trigger the FCC to enact
>type-acceptance rules for real, legitimate ham gear.

Not at all, but your "opponents" should be aware just how easy it is for hams to modify their nice big expensive HF/VHF rigs and get onto the 'freeband'. As I stated in my original message, it's illegally modified VHF gear that is the real danger, with the ability to be modified to talk generally anywhere from around 136mhz (sometimes as low as 118mhz) up to 174mhz. It seems to me you are fighting the wrong fight, Aaron.

Not necessarily.
I had my 99 F150 set up and running up to 2 KW and
never had a problem. If you ground both the amp &
radio, antenna well, run the coax and power wires away
from the car's computer, and make sure that the antenna
is placed as high as it can (on the roof would be the best
spot for it) and you probably won't have a problem.

Hey Thanks for the input. I wrote a letter to the VP at copper this morning with a copy of this post and a copy of the letter that I sent to the sales rep Suzanne. I will also check out the site suggested http://www.bbb.org and file a complaint. From what I gathered from this post, Copper is about like every other company there are good points and there are bad points. Lets face it companies are going to get away with as much as they can for the bottom line. Get as much money as you can and it doesn't matter how. Has anyone seen the stock market? The econmy is fine.

Probably the worst bootlegging is being done with Marine rigs, both HF and VHF, in Alaska and the Gulf Coast in search of the 'private channel' and freqs to simply gas on which are fairly rare in the legal allocations.

Our little group taking pix of ops over 28 is of several minds about what to do about it once we have the proof. I am for raising hell with the companies but not sending them to Kansas City simply because I do not see a lot of sense in busting some schlemp that has already been raped at the truck stops, is not generally all that bright to begin with, and is looking for a channel to chatter on to stay awake and sane. This is Nebraska remember and the Misery River is at milepost 459 so it is a long way to Wyoming. Footwarmers, however, get sent to KC with no compunction whatsoever; on a quiet channel no heat is necessary and its use implies outlawry.

This is a problem that will go away with the sunspots so I am not too bent out of shape about it except that we really do have to defend 28 just to prove we can. An occasional crucifixion will do the trick, no need for blood all over the floor, so racking up some arrogant twit is not a big deal. Some degree of proportion is needed to prevent the channel 19 conflicts from degrading to manslaughter as has occurred twice in NE this year.

Regulatory philosophy is an interesting issue. Where there really is a threat to life and property some hard-ass enforcement is necessary. Given the decrepit trash occupying the highways -- Jimmy Hoffa the Elder wanted trailers retired for sheer old age -- the tradition of truckers being above the law has a history outside of radio. Illinois some years ago proved what every engineer already knew: highway damage goes up by the

cube of the weight; but they will deny today ever doing the study. This says that whatever a 20k truck pays per mile, the 80k truck should pay 64 times that. On the scale of things, harassing drivers is not really where to begin.

Without intending a putdown or dissing you, why?

Receivers have several measures of merit of which sensitivity is one. But adequate sensitivity is not that hard to obtain on 27 MHz and once achieved makes little sense to try to improve unless you plan to use a bent coat hanger for an antenna. Beyond that stability and selectivity enter the picture: stability in the era of the PLL is also pretty simple. It is selectivity where the winners and losers emerge. Having a pre-amp hanging on the front without AGC probably will not do much and can seriously degrade the selectivity. And with CBs there is always the issue of protecting it from the transmitter which is why they tend to be together so the preamp can be switched out before the PA fires up. So a free-standing preamp seems like a vast effort toward a potentially half-vast result.

Let's talk a bit about selectivity which means something a bit different in a channelized service than it means to an Amateur HF rig but similar concepts apply.

Dynamic Range: Essentially the ability of a receiver to discern a weak signal with a lot of strong stuff in the receivers passband. You are trying to hear a weak one on channel 28 with king kong bellowing loudly (if not cleanly you are s.o.l under any scenario) on 27 and Foghorn Leghorn on 29. This can either desensitize the front-end or create mixer products that bury the desired sig. As the first mixer is typically the weak spot, pumping more signal into it may not be the best approach.

There are several measurements that tend to track together which few manufacturers ever disclose: blocking dynamic range, two-tone third order IMD, plus second and third order intercepts that measure this sort of thing. Note that filter bandwidth is not really the issue.

I guess the question is what are you planning to accomplish?

Dick NBK

Whatever, Mopy.
At the time I was living in the town of Live Oak which adjoined Selma so I had to drive through Selma daily. I asked my father about this thing, he was good friends with the city judge in Selma. He said that what the cops would do is drive up and down the highway and follow behind someone with an antenna on their car. If they were SEEN using the radio at the same time a "smokey report" was being given then they were nailed. The person was stopped and simply recognizing the voice was enough evidence. No Selma didn't get any revenue from the "federal charges" but it sure put the fear of God into the person facing the speeding ticket so they would usually just pay up and go away.

No Radar detectors are not illegal in Texas for passenger cars. I think they are illegal for truckers but I'm not sure. I suppose if you got caught using a radar detector to help you speed and they could prove it then they could file federal charges. They are sold as "driving aids" with a disclaimer that says that you should always obey traffic laws. That's how they can get away with selling them. I think that there are a few states where they are illegal but I can't tell you what they are. I personally don't have one.

I'll have to get you the actual State Code so that you can see for yourself, give me a few days. In Texas it IS illegal, under most circumstances, to divulge the location of a peace officer while he is in the performance of his duty. It has NOTHING to do with "free speech" or any other freedom, real or imagined. This is how may states make it illegal to have a scanner in your motor vehicle. Yes there are several with this law. It's nice, however, that in these states Ham Radio operators are exempted from these regulations because many ham radios do scan.

Kevin, WB5RUE

Liberals have rights, real and imagined. They want government to pass laws that guarantee that no one will violate any of their rights. They have no responsibilities, it is up to government to take responsibility for everything.

Libertarians have rights, real and imagined. They want government to pass no laws that would violate their right to do what they feel is right, which is up to their own individual interpretation. Responsibilities? They take responsibility for only those things that would not hinder the exercising of their rights.

Conservatives have rights, real and imagined as well as responsibilities. They want government to pass laws to remind us the difference between our rights and responsibilities. There can be no freedom without responsibilities.

I don't believe it is against the law for a peace officer to divulge HIS location if he chooses to. I suppose if he was having a particularly bad day or you returned a rude comment he most certainly would have looked for you. I don't believe he was "ridiculing you" he was correcting you. Did he call you stupid or anything like that?

Thanks Kung Fu Dude. ;)
I just got off of the phone with a Texas DPS officer and he says it IS against both Texas State law and Federal Law to divulge the location of a peace officer while he is in the performance of his duties.

Not even close to the truth. A great many CBers have been using the
Yaesu FT101 series radios (and others) for a very long time. They're
commonplace, they're comparatively inexpensive (certainly not $900),
and they're easily modified for 11 metres. Even my old Kenwood TS120
could be moded for 11m; it worked well and I doubt anyone could tell
it wasn't a "CB" radio. All the "serious" operators use amateur gear
since it's miles better than a type-approved CB rig in every way (and
not just more power output).

Actually, "truckstops, internet & mail order places" know there's a
demand for them, and these businesses are run by, well... businessmen.
People who find a need (or want) and fill it. Good old capitalism!

But think about it: A radio has never killed anybody (at least not one
who knew enough to keep one hand in his pocket when inside it), yet
some are "illegal" to even possess. Tobacco is a *poison*, yet is
taxed to help finance the government. Where is the parity? Or the
sense?

No he's not "back peddling" he's giving another example. In Texas this is
illegal too. A peace officer CAN pull you over for flashing your
headlights.

> it did, people would have stopped paying their taxes long ago.
>
> -Aaron-

I ask you again, Anal Aaron - you NEVER exceed the speed limit? That's
a Law. You NEVER break one yourself? Horse hockey; there are so many
of them that everybody breaks one once in a while and may not even
know it. And as a very wise man (Talmud?) once said, "the more corrupt
the state, the more numerous the laws." Sound like anywhere you know?

Unjust laws *should* be ignored. And many people have stopped paying
their taxes (mostly the millionaires, of course).

Corruption in government leaves the government with no moral standing
and all citizens should stop paying attention to it.

Ahh ... someone found the stickers! An amateur may not build more than ONE transmitter, transceiver, or amplifier of one particular type in a year. The idea is that amateur may build the stuff, but not market it (i.e. make a pile of the things and sell 'em). Sure, you can later sell it, but the point is that it won't be a commercial venture. Radiated emissions are another story; our computers must meet FCC requirements.

There is nothing illegal or invalid about a Uniden HR2510 offered for
sale (or auction) in an amateur radio group. Too bad you don't have
any sense, Anal Aaron.

Hello Dick,I found out that by using a rx preamp in front of my radio and using the various dsp functions I can receive stations farther away and clearer than with the radio itself.Or am I just foolin myself?Thanks

If i had a choice i would get the FTB, it is very powerful and has a lot of
nice features such as a clarifier on the transmit side.

Yea, just wire up a couple deep-cycle marine batteries in parallel and wire
em
up to the alternator using a battery isolator.
A rather large electrolytic capacitor may also be in order to help curb
those
sudden current draws.

Without having a clue what sort of gear we are talking about, far be it from me to tell you what is happening. But it would be a bit unusual for a rig using DSP to require a preamp to make it work or for that matter materially improve a situation. The latest version of the Yahoo FT-1000 uses one although one might question whether improving 75 meter AM from 3.2 to 1.2 uV given about 60 uV background is worth the effort.

I might suggest fiddling with the r.f. gain (backing it off on SSB while running up the audio) or AGC if adjustable to see if you might not get the same or better effect by reducing the trash in the filter. If you are using DSP to narrow the passband, the noise (and possibly audio)reduction might be interpreted as a loss of sensitivity which it is not. I have not a clue what it would do to the crappy Ancient Mary typical of CB.

Suit thyself but preamps are not required and are generally detrimental below 100 MHz and then only if you know what you are doing.

Forgive my lack of resistance to the obvious question: now that you have a real radio, why not take up real radio.

Dick NBK

Cool, another person that knows 'real' beer when they taste it. :)
Sierra Nevada is my favorite, and to top it all off, I live about 5 blocks
from the brewery... They have some brews that are only available at their
taproom, and they're even better than their 'mass-produced' stuff.
I know this is offtopic, but I just wanted to mention it. :)

If the ham only intends to operate legally then he will probably not
modify the radio. But there is also the possiblity that the radio
could be used for other HF services, or that the ham bands might
change. But these 'export' radios are clearly built and marketed for
illegal use, and that's how the majority of them are used. There is a
difference.

> I understand the ability to modify radios for

Amateur radio has been around almost as long as Dick, and while there
has always been some abuse it doesn't even compare to the abuse that
happens on the so-called 'freeband'. Ham radio has a method of
accountability called 'licensing', which most illegal operators
actively avoid. Hams also have the authorization to use quite a bit of
spectrum, which reduces the burning need to operate out-of-band. You
are comparing apples with tractor tires: both are round, but that's
about it.

rec.radio.cb is supposed to be a discussion group, not a trading
group, but it's frequently used for that purpose anyway. But in case
you didn't know, it's a federal violation to advertise or sell an CB
amplifier.

If your receiver is able to pick up the background noise, the only
thing a preamp will do is make it louder. In fact, it's insertion in
the line will degrade your signal-to-noise ratio to a slight degree.
The only way to improve your reception at this point is to improve
your antenna.

If a frequency sounds abandoned, then it's OK to take it? That is a "looters mentality". It's also very dishonest. What kind of ham are you to recommend such a thing? Never mind, you answered the question yourself.

>your "opponents" should be aware just how easy it is
>for hams to modify their nice big expensive HF/VHF rigs and get onto
>the 'freeband'.

They are aware. They claim that if hams are allowed lots of frequencies and lots of power, they, as unlicensed ops, should have them too, free for the asking.

>It seems to me you are fighting the wrong fight, Aaron.

I could say the same about you. One wonders why a legit ham would defend the practice of bootlegging.

Below is the official FCC word on the subject. Pay attention to the last question. If you want to argue about it, call the FCC.

-A

FCC CALL CENTER SCRIPT

2. NON-APPROVED C.B. RADIOS

Q. What is a legal C.B. radio?
A. All radio transmitters and receivers which are intended to operate on the 27 MHz Citizen's Band (C.B.) channels must be approved by the F.C.C. before they can be imported, advertised, sold or used. The manufacturer must be issued an F.C.C. grant of equipment authorization, called "certification", as indicated by an FCC ID on each unit. If the radio has a label showing an FCC ID, and the ID can be verified by checking the Equipment Authorization database on the F.C.C./OET Web page, then the radio is legal.

Q. What kind of radios are illegal to use on the C.B. radio channels?
A. Any radio transmitter, receiver, or transceiver which is designed by the manufacturer to operate on the C.B. radio channels, but which has not been granted an F.C.C. equipment authorization is illegal. These non-approved radios may appear in several different forms:
1. "10-Meter Amateur" radios, which have been designed so as to be readily alterable to operate on the C.B. radio channels, and/or on other non-amateur frequencies in the frequency range from about 24 to about 32 MHz;
2. "Export" or "full channel" radios, which are designed to operate over all, or a portion of, the radio spectrum from about 24 to about 32 MHz, including the 27 MHz C.B. radio channels; or
3. F.C.C.-approved C.B. radios which are designed so as to be readily alterable to operate on frequencies in the range from about 24 to about 32 MHz, which are not assigned to the 27 MHz C.B. Radio Service.

Q. What do you mean by "readily alterable"?
A. This means that the user of the radio can add, or change, its operating frequencies by simply flipping an internal switch, by clipping the leads of, or installing, a simple component such as a diode, resistor or jumper wire, by installing, moving, or removing, a jumper plug, by connecting or disconnecting a connector, by replacing a plug-in semiconductor chip, or by programming a semiconductor chip using special access codes or an external device, such as a personal computer.

Q. What are these other frequencies between 24 and 32 MHz used for?
A. These frequencies are assigned to many different licensed radio services, both in the United States, as well as in other countries. Authorized users include Maritime and Aeronautical radio stations, standard time and frequency stations, international broadcasting stations, amateur radio, and government stations. A portion of this spectrum is also allocated to radioastronomy, where scientists are attempting to listen to very weak radio signals coming from distant stars and galaxies. No radio transmitters of any kind are permitted within these radioastronomy bands, so any earth-bound transmitted signals can completely disrupt radioastronomy observations.

Q. I don't hear any other stations on "my" frequency, which is not one of the 40 allocated C.B. radio channels. So what is wrong with operating my radio station here?
A. You may unknowingly cause interference to legitimate communications. Many of these frequencies may appear, to the casual listener, to be unused. Some of the authorized users may be using emission types which can not be plainly detected. Or, their transmissions may be intermittent. You will not hear any legitimate signals within the designated radioastronomy bands. However, just because a frequency sounds clear, that does not mean that it can be used without proper authorization.

Q. Why do some people operate illegally on these frequencies?
A. Many of these frequencies may appear to be "free" of any legitimate users, so some people think they are "free for the taking". The illegal radio operators are commonly referred to as "freebanders", and use their radios as a form of hobby, similar to Amateur Radio. But for many reasons, these people choose not to obtain an amateur radio license. They operate on these frequencies because under certain weather and radio propagation conditions, their signals can extend all the way around the world, enabling them to communicate with other similar unlicensed stations.

Q. What can happen if the F.C.C. catches me operating on an unauthorized frequency?
A. You are subject to severe penalties, including monetary forfeitures, confiscation of your radio equipment, and possibly even jail time.

Q. I've heard that some of the "big name" amateur radio equipment can also be altered to operate on non-amateur frequencies, including the C.B. radio channels. So why are these radios not considered to be "non-approved C.B. equipment"?
A. First, it must be emphasized that use of this type of amateur equipment on unauthorized frequencies, including using it on the C.B. radio channels or other non-amateur frequencies in the 24 to 32 MHz range, is illegal, and doing so will subject the user to the same penalties as mentioned above.
That being said, there are legitimate reasons for some amateur equipment to be used on certain non-amateur frequencies, such as on military M.A.R.S. (Military Affiliate Radio System) and C.A.P. (Civil Air Patrol) frequencies. MARS and CAP radio stations are only authorized to operate on specific assigned (non-amateur) frequencies. With just a few exceptions, most of the assigned MARS and CAP frequencies do not fall within the 24 to 32 MHz frequency range. Although some models of amateur equipment (manufactured by companies such as Alinco, Icom, Kenwood, Ten-Tec, Yaesu, etc.) may be capable of operating on the C.B. radio channels, they do not display the assigned C.B. channel number, nor are they designed to deliberately facilitate operation on the C.B. channels.

BZZZZZZT - wrong!! Nothing is said about transmitters, or
transceivers.

ï¿½97.315 Certification of external RF power amplifiers.

(a) No more than 1 unit of 1 model of an external RF power
amplifier
capable of operation below 144 MHz may be constructed or modified
during any calendar year by an amateur operator for use at a
station
without a grant of certification. No amplifier capable of
operation below
144 MHz may be constructed or modified by a non-amateur operator
without a grant of certification from the FCC.

Well, you may get it next year, then again you may not. It has been
postponed for two conventions already but perhaps three is the charm.

If you get gung-ho, use my e-mail and download Morse Academy from
http://ah0a.org.
Not as bad as you might think. Ask Bert, WA2SI who shows up here
periodically about learning code.

They (radar detectors) are not permitted in commercial trucks. They are also
not allowed to be used in VA or CT among other states I'm sure. They DO have
units that can pick up the signal from your unit and you can be stopped for
using one in some states. I'm still of the opinion that if it is a radio
frequency and being "broadcast" on, you should be allowed to receive it! This
is how the law was ORIGINALLY written but later revised to allow for such
bullshit. Radar is nothing more than microwave broadcast.

I'm sorry I should have been more clear. The Officer in question and others on the Ch had some fun at my expense. I don't mean swearing or getting vicious about it, just harassing me a little. After all, what good is it to call out a speed trap if your ten miles off?

As to the question at hand, I just can't believe it. Like I said before, good luck proving who did what on a CB. Suppose since you did some foot work and confirmed the legalities I need to do the same. I just refuse to believe that it is against the law until I look it up for myself. Until then I'll grudgingly concede you must be right.

Dave

Kevin, thanks for the confirmation I knew it existed but many people don't ,
I didn't beleive it at first either but there are many laws like this.

The only reason I brought this up was because Landshark posted the quote
below and he mentioned nothing of using a CB Radio, so he can back peddle
his own stupid comments

" Sorry Kevin, it's not against federal law or for that fact most
state laws to inform people that a peace officer is using a radar gun to
enforce speed limits. To interfere with a peace officer while he is
performing his duty, he has to actively be engaged with an incident, so just
telling people that he is using
radar ahead of them is not interfering with his duties.

Oh really so your saying freebanders only use rci 2950's? They don't use Kenwoods or Icoms etc? If you owned a Icom 706 that was modded Ill bet you would use it on Cb band and beyond. your a freebander as noticed from previous posts and your rci 2950 and cb gear, your a no code tech you have no need for the Rci, and it is illegal to use on Cb butthat didnt stop you besides it's not real hard to sit in the toms river area and catch you transmitting out of band. i would like to see your name in the next rain report Andy, you have a license to lose just like all the other hams. Who if caught run the risk of fines and loss of license.

How does a Icom 756 or kenwood 950 that has been modded pose more of a threat to harmful interference than a rci 2950? Where does it matter ?

Riley should traek your ham ticket your nothing more than a glorified Cber
anyhow Andy.
What are the accepted limits of the freeband? 27.405 to 27.999 and just who
set these limits? What should I say to the freebanders below channel 1 on
25/26 mhz or the ones who venture onto 10 meters that they are not observing
the accepted Illegal limits of freebanding. Or the illegals who do buy vhf
rados or Ht's who key up repeaters to screw with the hams> huh Andy perhaps
you should just go back to being a full time Cber. the Ham community doesn't
need guys like you spreading the good word.

I knew something didn't seem right about that, but I couldn't see it
until now: If a freeloader runs any kind of audio modulation on 27.999
it will put a sideband right into the 10m band! So how is that band
allocated? What are the first couple of kHz used for?

Absolutely, if someone does not want me to pick up their
transmission, then figure a way to keep if from crossing my
property or out of my receiver.

28.0-28.3 is narrow (1 kKz bandwidth) which means digital modes and cw.
As most freebanders appear to use - for reasons known only unto them - LSB
there is probably no problem beyond the obvious ones. The low end of 10
is generally cw DX by some pretty good dittyboppers.

I have an alternator I ordered out of
Arizona (name escapes me) But it's approx 25o amps
plus amp with a dual battery set up. It was advertised for
use as an Arc welding set up, so I figured it would suit my
needs. I took all of the radio equip. out, the wife now drives it around.
I'm busy building a 68 Camero, God forbid someone that puts an antenna on
one of those.

I asked for you to cite the California Law, now
Kevin comes back with "I talked with Texas DPS"
Now If you want, Please cite California , then Texas law
simple question. I personally don't care about Texas
law, but since you two both stated federal and state laws
are being violated, now all of a sudden it's just one state. I
asked for the proof on California law, so go ahead and
knock yourselves out for that fact, but state the specific code where it is
against the law to use a cb to inform others
that a cop is using radar, otherwise, everything else is
just what you are posting (wasted bandwidth)

I asked for you to cite the California Law, now
Kevin comes back with "I talked with Texas DPS"
Now If you want, Please cite California , then Texas law
simple question. I personally don't care about Texas
law, but since you two both stated federal and state laws
are being violated, now all of a sudden it's just one state. I
asked for the proof on California law, so go ahead and
knock yourselves out for that fact, but state the specific code where it is
against the law to use a cb to inform others
that a cop is using radar, otherwise, everything else is
just what you are posting (wasted bandwidth)

It's still FUNNY!! And not exactly old. He went back to jail on June 19th.
Sentencing comes up pretty soon. And I don't "hate" CBers. I DO dislike
bandits who "steal" frequencies, operate and interfere on 10 and 12 meters,
and freeload below channel 1. As long as CBers remain within their own
turf,
don't bother me when I am on other frequencies I hold licenses for, I have
no
quarrel. Those who refuse to listen (Like Rabbit Ears) deserve what they
get,
and I snicker at them every time. I can't wait until FCC puts a few more
non-
believers, deliberate interferers, and freeloaders in chains, too. After
all, Mr.
Flippo (Rabbit Ears) thought "they don't care", "I'm invincible", "They
won't
touch CBers", "Ah've got mah 'rah'ts' to tawk on this hyar reddio, and ah
don'
need no license"> Wanna bet he's changed his tune now? HEHE! LOL!

It used to be like that here in Napoleon Ohio, and there are still a
good many of that group in the area hanging tough. We used to stau up
until 3-4 AM talking about strange but clean topics, we had a blast,
many families would turn off their tv's and gather the kids around the
CB and even the kids would take part of the evening discussions.

We also had a SSB club out of Defiance Oh that I was a member of. I
still enjoy talking to my friends on CB, but when the idiocy gets to
be too much I move up the line to another band or two, that are much
quieter, and have nice people to talk to.

The only thing I have ever even considered getting from them was an
antenna, then I realized I could get the same thing MUCH cheaper from
a local radio shop.

A friend of mine had the same thing happen, he bought a "new" 148 GTL
from them, only to find out that someone had bought it, and tried to
do a mod, and add a connex board ect, and they butchered it to hell.
He never got his money back either.

400 watts will draw 33.3 amps from a 12 volt sys. And that is only when you transmit. My Geo metro's main fuse is 60 amp. The starter must draw allot more and your battery/charging system is desighned for this. I would install it direcrly to the battery. Just remember that if your battery gets low that the lower the volts the higher the amps go to make 400 watts.

THE PERKS OF BEING OVER 50

1. Kidnappers are not very interested in you.
2. In a hostage situation you are likely to be released first.
3. No one expects you to run into a burning building.
4. People call at 9 PM and ask, "Did I wake you?"
5. People no longer view you as a hypochondriac.
6. There is nothing left to learn the hard way.
7. Things you buy now won't wear out.
8. You can eat dinner at 4 P.M.
9. You can live without sex but not without glasses.
10. You enjoy hearing about other peoples operations.
11. You get into heated arguments about pension plans.
12. You have a party and the neighbors don't even realize it.
13. You no longer think of speed limits as a challenge.
14. You quit trying to hold your stomach in, no matter who walks into the room.
15. You sing along with elevator music.
16. Your eyes won't get much worse.
17. Your investment in health insurance is finally beginning to pay off.
18. Your joints are more accurate meteorologists than the national weather service.
19. Your secrets are safe with your friends because they can't remember them either.
20. Your supply of brain cells is finally down to manageable size.
21. You can't remember who sent you this list.

If you ask me, it's a lot of trouble and expense to go through just to say "ba ba booey" (or something similar) on a CB channel and sound all distorted and crappy. Plus it's illegal.

>yourself.
>

So then you can't answer the question. That's ok. We still love you.

Illegal ops working the "freeband" are hurting no one, as long as they stay within their "freeband". Operators around the world use the frequencies.

>They are aware. They claim that if hams are allowed lots of
>frequencies and lots of power, they, as unlicensed ops, should have
>them too, free for the asking.

I ask again. Who's using the "freeband"? I know it's allocated for lots of different services, but who's using it?

Once again, you seem reluctant to tackle the topic of 2 meter radios that are very easily modifiable with the ability to transmit all over frequencies that ARE in use by other legit operators, unlike the "freeband".

That's assuming 100% efficiency and nothing else hooked up, not even
the radio. And that's also assuming that 12 volt system is really 12
volts and not 13.6-.8 volts like most other automotive systems. And
also no resistive losses on your power lines. It's more likely that
the amplifier is working at 40 to 50% efficiency and the radio is
drawing 3 to 4 amps, which will give you a current draw (best
scenario) of something like 61 amps.

> My Geo metro's main fuse is 60 amp. The starter must draw allot

An amplifier doesn't work that way. You lose volts, you lose watts.
(Hey, maybe that's what is meant by 'swang'...!)

>frequencies.

The FCC has answered your question (below). If you are too dense to understand their answer, call them for clarification. -A

Q. What are these other frequencies between 24 and 32 MHz used for?

A. These frequencies are assigned to many different licensed radio services, both in the United States, as well as in other countries. Authorized users include Maritime and Aeronautical radio stations, standard time and frequency stations, international broadcasting stations, amateur radio, and government stations. A portion of this spectrum is also allocated to radioastronomy, where scientists are attempting to listen to very weak radio signals coming from distant stars and galaxies. No radio transmitters of any kind are permitted within these radioastronomy bands, so any earth-bound transmitted signals can completely disrupt radioastronomy observations.

Q. I don't hear any other stations on "my" frequency, which is not one of the 40 allocated C.B. radio channels. So what is wrong with operating my radio station here?

A. You may unknowingly cause interference to legitimate communications. Many of these frequencies may appear, to the casual listener, to be unused. Some of the authorized users may be using emission types which can not be plainly detected. Or, their transmissions may be intermittent. You will not hear any legitimate signals within the designated radioastronomy bands. However, just because a frequency sounds clear, that does not mean that it can be used without proper authorization.

Slag language is something that happens when a group of people gather
over long periods. If you gather in any group for a long you will
learn the slang. Yes CB can be used outside of your vehicals,
stationary, and in home use A.K.A. base station.

> (2) What sort of modifications or tweaks are permitted in CB radio? Antenna
> adjustments? Power output? CB accessories?
>
No modifications are allowed by the FCC. If you modify your CB if
voids FCC Type Acceptance. Antennas are not supposed to be over 60 ft
high. Power output is 4 watts. You can have a watt meter, swr meter,
and power mike.

> (3) What is freebanding?
Freebanding is operating anywhere with total disregaurd to the rules.
>
> (4) What is 11m DX?
Illeagal. To talk over 150 miles you break the rules.
>
> (5) Why do Hams hate CBers? If CB is just ordinary communication, what would a
> Ham feel this is bad or feel superior about?

Ham radio opertors don't hate the CB service and what the service is
made for. What Ham radio operators hate are all the CBers that break
all the rules. Ham radio operators feel superior because of the
testing that they go though to become Ham operators

I hope that I answered your questions. Now after saying all that CB
radio can be alot of fun. You will find that all your local CBers are
freebanders. They all break the rules one way or another. Have fun!

>How does a Icom 756 or kenwood 950 that has been modded pose more of a
>threat to harmful interference than a rci 2950? Where does it matter ?

If it's capable of transmiting in the 150's, then it would be very simple for an operator to keyup the local public safety repeaters and cause havic. Can't do that with a radio on the "freeband".

You still don't get it: The 'freeband' is whatever freq an illegal operator chooses to use, regardless of it's legal allocation. They don't respect the fact that 27.410 to 27.999 has been allocated, so why should they worry about any other part of the spectrum? Because the hams own Riley? Big whoop! He's not doing anything that's making a difference. Instead of passing the buck to some guy hired by the FCC to keep the hams pacified, the hams should be discouraging illegal operators wherever they roam -- because they WILL roam onto the ham bands! It's like they are saying to a burglar, "Go ahead and rob my neighbor and I won't say a word, but don't steal from me or I'm going to tell on you!" The burglar would just laugh in your face as he makes off with your stuff, and that's exactly what the 'freebanders' are doing -- laughing in the face of the hams AND Riley!

But I'll tell ya what, Andy. If you are concerned with 10 meter intruders, take it up on a ham newsgroup. 10 meters is a ham band, not the Citizen's Band.

It doesn't matter if you think they are being used or not: If it ain't
yours, don't fuck with it. If CB isn't enough, get a ham license. If
you have a ham license and that isn't enough, upgrade the license. If
THAT STILL isn't enough, find a different hobby.

My Uniden HR-2510 is not junk. With the keyer, filters, chipswitch mod it's one of the most affordable and versatile portable mobile rigs I own (10/12/15). 43 countries, and 32 states on 10 meters alone during the last sunspot cycle. It's been on many a backpacking and canoe trip with a gel cell, solar panel and a dipole. When my dad was alive he used his HR-2600 for our daily NC - TX sched. Sure wish I hadn't sold his. Its also a great rig for local AM/FM use simplex and repeater use too. I've used it for a downlink on RS satellites with much success also.

Sure I could use my "big" HF rigs (Collins, TS-520, Drake "C" line and TS-2000) but my baby is my modified (filters, keyer, tuner, etc.) Uniden. Until I get one of those Yaesu QRP HF rigs that is.

Take your so called FCC policing BS somewhere else and get a life. Bet you look for folks with "illegal" scanners too? I have 3 myself...

You talk big for a nameless troll. But listen up, "slamfire": I was
raised to love my country. I may criticize it, but I still respect it
enough not to piss on the graves of those that gave their lives for

the freedoms and privileges that you encourage others to abuse. If you want to challenge MY patriotism then you come out of the shadows and put your name to your words like a man -- nay, like a proud American! And don't EVEN try to lay that "you're not a patriot because you didn't serve in a war" crap, because patriotism isn't just about risking your nuts for your country, it's about your dedication to its concepts and ideals. And if you are encouraging others to violate federal regulations, then you certainly don't have enough dedication to the concepts and ideals of being an American to call yourself one!

And for those that don't already know,

Frank Gilliland
USMC, 1981 - 1985
3/8, 2nd MarDiv, 1983 - 1985 (Fortuna Favet Fortibus)
24th MAU, 1983,4 (Multinational Peacekeeping Force, Beirut)

Now, do you have something more you want to say before you get dropped into the killfile?

Must be voobs son.
My HR-2510 served me very well in the mobile.
NOTHING wrong with it as a 10 METER RADIO as it was sold for when new.
Completely legal as it was designed for. Many if not all HF ham rigs might be able to go on 11 meters. It's up to the operator of the equipment to keep his own station legal.
Wish I had not sold my old 2510 3 years ago, it was a great 10 METER radio.
Hey, ya know, how come nobody's bitching about converting a 11meter CB rig to 10 meters??

Ran a CB shop in Cincinnati(Deer Park), Ohio called L.C.A. (Loud Clear Audio).
It is no longer in existence. Would also go by the handle '88' and drove
around town in a cammo van, ran about 5 or 6 batteries and some big ass amp.

Just curious, good group here.....I'm back to lurker. :-)

Andy it's pretty sad that your idea of being a good amateur radio operator is to laughingly encourage CB bootleggers to use frequencies allocated to other services - as long as they stay off ham bands. I can only assume that you are incredibly short-sighted or amazingly selfish. As Frank pointed out, it's like telling a thief that it's OK to rob the neighbors house - and what's more - you won't squeal on him. But since thieves have no scruples, chances are pretty good he'll be back to rob your house as soon as you go away.

Among others, SW broadcasters, the US Forest Services, the military, and TV broadcast remotes made heavy use of the so-called "freeband" frequencies -- until bootleggers all but drove them off. As a former or active freebander, is this "history" something you can look back with pride on? That an illegal group of bootleggers and outlaws (which you identify with) successfully drove away and deprived the legal users of a frequency allocation?

And your reasoning/justification for this piracy is that "the frequencies sound abandoned"? Hey, I personally never hear any sigs on 28.100 mHz, does that mean it's OK for unlicensed use? How about 426 mHz, honestly, I never hear anyone there either, does that mean it's OK for unlicensed use?

Of course not. The same FCC that protects your slice of Technician Ham spectrum protects the allocations of other services as well. And according to the FCC, the "freeband"does have legitimate users, no matter if you can "hear" them or not.

and
> who is being interefered on by "Freebanders".

The Commission does not in fact know who they are allocated to because
they don't do the allocation. They are one of three groups who do this
sort of thing so aside from some commercial allocations in the 27.5 range
that you can find from the FCC data base on their website the rest are
government freqs. It has been a lot of years but I have heard the MP
jeeps at Ft. Sill using some wide FM in the freeband. There were/are some
RACES freqs on 6 meters that were allocated to do liason with these old
jeep radios (they went 20 to 70 or so) and we had one hell of a time
finding some old wideband FM junk to do that as commercial channels were
narrowed about the time CB started which made lots of junque available to
start the repeater craze -- that's why 2 meters is based on 60 kHz
channels in the 146-148 range. We sure as hell proved that 5kHz swing
doesn't work for bullcrap on the15kHz split-splits.

Someone like the Forest Service that flys PB4Ys from WW2 as tankers to
this day is a prime candidate for using these old boat anchor Jeep radios
and trash of that vintage for fire fighting at which it might be damned
good for the purpose and terrain. I would suspect that there are still
some Guard or Reserve units running these things in fairly low-priority
projects that can become high-priority in a big hurry. How many, who
knows.

You are not going to hear FM over 40 kHz wide on your rigs, particularly
not sideband rigs. As a practical matter you will not do much more to
them than desense the hell out of them; owing to the famous FM 'capture
effect' they may not realize that you are there except they can't raise
anyone. And when you are ass-deep in alligators it is not time for a fox
hunt.

And there is the minor matter of marine use in the Pacific on 10 kHz AM
channels on the zeros. See http://www.vkham.com.

The risk is small to be sure but finite. Just what one does about the
danger of killing someone is a measure of the man more than the risk.

Thats not what this particular part of the thread is about. It's about how rediculous it is to be screaming about "10 meter export" radios that encourage illegal operations on a part of the spectrum, while allocated, is unused, when there's more of a danger from modified 2 meter radios.

VHFRadioBuff,
I think you're loosing sight of something,
the frequencies in question do not 'belong'
to the so-called 'freebanders'. They 'belong'
to someone else, doesn't matter if they use are
using them or not. If you own a 'lake' home
but don't use it all the time, does that mean
that someone else can? It's basically the same
thing, and I really doubt you would like it if
it's ~your~ 'lake home'.
You say a lot about yourself by what you do
or condone...

27.41 to 27.54 MHz is for fixed and mobile services, and 27.54 to
28.00 is for exclusive use by the government. A few months ago I
compiled a list of licensees for the first portion, which was quite
large. How do you know that they aren't used? Do you watch your
spectrum analyzer 24 hrs a day? I don't think so. And what about the
upper portion? What are the government agencies that that are
allocated to use that part of the spectrum? Don't just guess, provide
a link or a reference. Because if you don't know who "isn't" using
them you can't show they are not being used.

If you want to prove your argument you must first prove your premises:

1. That the "freeband" (from 27.41 to 28.00 MHz) is not used by any
legitimate radio service;

2. That there is a "danger" from modified 2-meter radios;

3. That this "danger" is greater than that posed by operation on the
"freeband".

I'm betting that not only will you not even try to prove your point,
but you will come up with a lame excuse why it can't be proven. On the
other hand, I can look at the FCC reports and find out how many
violations there have been for illegal operation just above 148 MHz,
compare that with the number of IOs on the freeband and 10 meters. And
I know for a fact that the military uses 27.54 to 28.00 MHz (MOS 2841,

radio repairman), but I don't think it will be too hard to find out how else the band is used by the government.

So you do your homework and I'll do mine. Fair enough?

>27.41 to 27.54 MHz is for fixed and mobile services, and 27.54 to
>28.00 is for exclusive use by the government.

And if any of the frequencies in the so called "freeband" were actively being used, there'd be a bigger effort to get rid of the illegal operators there. This "band" is used by operators around the world and would thus be a big problem if any of the authorized users actually used them. I think we'd hear a lot more about it if this were the case and the governments of the world would have their respective FCC equivelents working to clean up the band.

>1. That the "freeband" (from 27.41 to 28.00 MHz) is not used by any
>legitimate radio service;

See my above reply.

>2. That there is a "danger" from modified 2-meter radios;

The fact that most 2 meter radios are very easily modified to transmit out band band and that when so modified, they have the capability to transmit PL tones and offsets, just like the public service radios, presents a danger to those frequencies.

>3. That this "danger" is greater than that posed by operation on the
>"freeband".

Again, I have yet to hear of ONE incident in which operating from channel 40 to 10 meters has caused any harmful interference on an authorized user of the "band". See question #2 for my answer about the increased danger by modified 2m rigs.

>I can look at the FCC reports and find out how many
>violations there have been for illegal operation just above 148 MHz,
>compare that with the number of IOs on the freeband and 10 meters.

Better yet, let me know how many violations have been reported to authorized users between channel 40 and 10 meters compared to 148mhz+. I have made it clear that I am not talking about violations on 10m. I am talking about harmful interference caused to authorized users between channel 40 and 10 meters.

>I know for a fact that the military uses 27.54 to 28.00 MHz (MOS 2841,
>radio repairman)

And I spent 7 1/2 yrs in the Army and I never once saw a radio in use below 30mhz.

Landfag direct us to a site that has Califfornias Penal code or ther Laws regarding traffic I know you know all about the Penal code. This statue exists all over the USA your just either to stupid to ask someone (Cop) or just being your usual jerkkoff self. I have a better Idea go out and let a cop who is shooting radar see you flashing your headlights to warn other motorists.

Oh I have read it Andy your a nocode tech who uses the freeband and thats
all I need to know.
Why did you modify your ft100?

> >How does a Icom 756 or kenwood 950 that has been modded pose more of a

VHF marine radios are capable of transmitting in the 150's does that make
all boat owners frebanders? Anyone who keys up on public saftey bands is a
real dimwit and will be caught, please show us where all these ham radios
are being used in this fashion? Provide some proof surely there must be
something in writing dsaying the police bands are being used by Ham
Frebanders... LOL Andy go back to 27.555 I hear the dx running

Andy, from what you heard how about from when you transmitted on the
freeband they used LSB

harmful
> interference caused to authorized users between channel 40 and 10 meters.

Better yet why don't you provide the answers to your fictious claims yo keep saying how dangerous hams are with 2 meter radio, where is the proof? Or are you just going on your own experiance of keying up police repeaters? Most all police I know work the 500 mhz band and many more are on the 800 mhz band, guees that throws your theory partly out of the water. In fact lets see what beachwood Nj police and its neighboring towns use, perhaps they have been experiancing you
keying up anfd interfering with them.

> >I know for a fact that the military uses 27.54 to 28.00 MHz (MOS 2841,

www.mods.dk. Check out the mods for 2m radios that allow TX capabilities in the public service band.

> Most
>all police I know work the 500 mhz band and many more are on the 800 mhz
>band, guees that throws your theory partly out of the water.

A good number of police departments in NJ use frequencies in the 150's. There are some on trunked system in the 500 mhz, like Ocean County and Dover Twsp, which recently went digital. There are still a ton of agencies in the 150's, though.

>lets
>see what beachwood Nj police and its neighboring towns use, perhaps they
>have been experiancing you
>keying up anfd interfering with them.

They are on the county's 500mhz trunked system because of the size of the towns in the area. Monmouth County in particular has a lot of agencies in the 150's.

>Or are
>you just going on your own experiEnce of keying up police repeaters?

Only time that happens is when I'm working and need to talk with another department.

>I think I have narrowed it down to a ranger.

How about a real CB...Uniden? Grab a Grant XL or LT and you wont be sorry. Here's a new one (NIB or New In Box) on ebay that's way more affordable than the two Rangers.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1366988772

That's a GREAT deal in the making.

All legalities aside. If your mind is absolutely set, get the FHP and please use a Low Pass Filter. A much better choice would be to get the Uniden though. If you decide that you'd like to get your ham ticket, the price of a brand spankin' new IC-718 that covers 10 thru 80 meters is only a little above what you're willing to pay for that FTB...and much cleaner. Here's some helpful links.

http://www.qrz.com/p/testing.pl

http://ah0a.org

Beste of luck to you, whatever your choice. Any ?'s, drop me an e-mail.

Really, so your saying your a police officer? What town? Dover Twp?,
Manchester? Toms river? I am very familair with all the PD's in your area
as well as most of the supervisors at them.

And that's just police frequencies in Monmouth county... Ocean County is a little more with the times with their frequencies, but there's still lots of activity in the 150's.

>There are more than some on 500 mhz how does a 2 meter rig get on 500 mhz?

How would you know who talks on 500mhz in this area? Oh, that's right, you're a Comcast customer, so you are probably in Ocean or Monmouth county. And no, a 2m rig doesn't go into the 500mhz area. They typically have an RX range of approximately 132 - 174, sometimes as low as 118.

You are not doing the math right. You are looking at more like 55 amps to run a
400 watt amp. Do your ohms law crap and then double the number to allow for
the INEFFECEINCY of the transistor device.......about 50%.

Ok Andrew how many do you see that are on the VHF Band in the list below ?
and How many are actually still used? VHF freqs have been abandoned in favor
of the trunk systems. Does that not mean people can't Freeband there?

>How is a guy
>who claims to be a policeman now, how does he condone breaking the law?

BTW - again, you are not reading the thread. I never once condoned breaking any law. I mearly pointed out that 2m rigs are just as capable of being modified as "export" radios and that the frequencies that open up on 2m are more dangerous than the "freeband".

Also, when talking about the radio, you are talking about FCC regulations. By modifying your radio or transmiting out of band, you are violating the regulations. The only time the law comes into is if a municipality has passed a town/city ordanance that supports the FCC regulation. This is under a recently enacted law that allows local government to enforce FCC regulations.

Hmm.. that's funny, you must receive a modified version of my posts... I don't seem to see anything in there saying I condone the example I presented. If I said that talking on the "freeband" is like shooting someone in the head, is that condoning it?

I think it's time for your prozac.

Ok Ill reread it, just to cover your ass.

I mearly pointed out that 2m rigs are just as capable of being modified as
> "export" radios and that the frequencies that open up on 2m are more
dangerous
> than the "freeband".
>
> Also, when talking about the radio, you are talking about FCC regulations.

FCC regulations are Federal Law, so you don't care about breaking them?

> By modifying your radio or transmiting out of band, you are violating the
regulations.

Just like Cbers and freebanders using Rci 2950's and amplifiers right?

>The only time the law comes into is if a municipality has passed a
> town/city ordanance that supports the FCC regulation. This is under a
recently
> enacted law that allows local government to enforce FCC regulations.

Ok so until the town passes a ordinace it is ok to go around your town
keying up 5kw and or talking on the freeband, modifying Cb's etc?

>Yes anyone can buy a 2 meter radio or even a vhf radio even Cber's

That is true. I never said it was hams that were a threat to illegal interference on public safety frequencies. I said that 2m radios can be modified just as easily as "export" radios, but can be used on public safety frequencies.

1966. Re: Re...10M rigs, Customs, legals-The Real Deal...

Wrong paralell.
CB'ers are the Jews
FCC is the UN giving us a lil slice of land 9 miles wide.
The Hams are the Rag Heads screaming bloody murder.
You Vob are Osama Bin Laden.
Freebanders are the IDF taking Jerusalem the west bank and Golan heights.
Where this paralell goes awry is Land for Peace.
It ain't happnin
Makes ya want to wear an eyepatch when you keydown the ol 32pill doesn't
it:)

No, because that would violate FCC regulations, which you agree to abide by
simply by owning the radio.

Subject: FS: Astatic D-104 Silver Eagle desk microphone
Newsgroups: rec.radio.swap
Date: 2002-07-03 06:53:48 PST

I am selling an Astatic D-104 Silver Eagle microphone in good physical and
working order. One small scratch on base. Used in a non-smoking environment.
Currently wired for an RCI-2950/5054 or other radio using the same pinout.
Buyer to pay $10 shipping to lower 48 states. I accept USPS Money Order,
PayPal
or Billpoint. Item will be insured. Asking $75. I am selling this item
because
I have just purchased a Yaesu FT-100D and no longer will need it.

You just can't be civil, can you?
Kevin first posted that is was against state and federal
laws. I stated it wasn't, you jumped in and said it was,
I asked for you to cite the laws, even the federal stature for it. Kevin
responds with, I talked with a DPS official, you respond with go find it
yourself. Tough considering it doesn't exists.

Have fun today George, don't worry to much,

Oh your true colors are coming thru Andy!

From: VHFRadioBuff (vhfradiobuff@aol.comspamsux)
Subject: WTB: Magnum 257, TRC-485, Midland 79-290
Newsgroups: rec.radio.cb

Date: 2002-03-29 21:31:14 PST

I am looking for a Magnum 257, a TRC-485 or a Midland 79-290 or similar
compact
CB radio. It must already be modified for "channels" and the clairifier must
be
"opened". If anyone has one for sale, please email me direct.

How abou you buying a rci 2950 and using a Rci2950 is that not breaking the
law since you arent authorized to use HF on 10 meters where did you use the
2950 oh that is right on the freeband, but that is ok that is not breaking
any laws. And the little comment about jaywalkin etc Andy what type of Cop
are you Really?
You look the other way for friends and other infractions? Are you really a
police officer? If so what dept do you work for? why is it a problem to
tell anyone?
It is easy enough to find out.

news:<ujbou5ojcha705@corp.supernews.com>...
> If the FCC was impotent to do anything about Howard Stern how can they get
> rid of millions of cb radios?
One they don't get rid of millions of CB radios. What I think that
needs to happen is to do away with the Service complete as we know it.
I think these changes to the CB service should happen for the FCC to
get some kind of controll of over 4 million transmitters.
1) To shoot skip should be legal
2) To talk about radio equipment should be legal
3) The freebander should be granted amnesty
4) No licsence class amateur ticket should be formed
5) Use the ranks of amatuer radio to police the band
6) Allow amplifiers on 11-meters for those who pass a test
7) Encourage the truckers to use channel 10 of the FRS
8) Encorage the FCC to go back to basics in other words start being
the servant instead of the master.
9) Give the people what they want.
Here is my opinion on PL-106-521, making CB rules enforceable from
local levels. What a open door for corruption. It is another why for
the police to come into your house without a warrent. All the cop
would have to say was that he suspected a CB radio on the premises.
Here in the great state of Georgia the Franklin county sheriff's
Deputies have had linears as well as modified CB radios put into their
squad cars. In Madison county we have a Sheriff's deputy that is into
freeband operation big time. At first I thought that this might have
been a good ideal but now I think that it is a bad ideal.
The best thing that could happen to CB radio is the 100 % Annexation
including operators in to the amatuer community. Everyone always looks
at the bad that would come from this and I only see the good from it.
It would give the band BACK TO THE FCC and it would increase the size
of amateur radio. After all alot of hams got their first experance
with radio on CB.

No reason for you to post anything in this newsgroup, to tell you the
truth. And, Yes; I believe you would post false information if you
thought it would support your narrowminded, jackbooted position.

> Regarding Grant, J.F.K., Jackson and Lincoln, etc. You have to ask
> yourself....why hams would want to buy "10 meter radios" with 1-40
> "channel knobs" and 15 khz steps?
>

Why not? You got a problem with 15 kHz steps? This is inaccurate
anyhow; since almost EVERY radio can do at least 10 kHz steps, and has
a RIT to get in between!

As usual, Anal Aaron, you make no sense. Don't forget folks: Anal
Aaron encouraged a guy to get his new amp modified for 11 metres!

Amateur Radio Newsline™ Report 1301 - July 19, 2002

Amateur Radio Newsline report number 1301 with a release date of Friday, July 19th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The United States takes the gold at W-R-T-C 2002 but ham radio growth in the U-S appears to be standing still. These stories are first on Amateur Radio Newsline report number 1301 coming your way right now.

(Billboard Cart Here)

**
RADIOSPORTS: N5TJ AND K1TO MAKE IT A THREE-PEAT

The Lakers did it in Los Angeles in basketball. Now the Radiosport team of Jeff Steinman, N5TJ, and Dan Street, K1TO have made it three in a row as they win the World Radiosports Team Championship games in Finland. Dave Bell, W6AQ, attended the games. He is just back and we asked him to describe the event:

--
Dave Bell W6AQ: “I got to go out with the camera and watch them in action. And I saw some of thje worlds best contesters and I realized how they win contests: Thst is, they stay focused totally on what it is that they are doing for 24 hours. And other than swap chairs with a co-pilot so that the co-pilot becomes the pilot, those guys are focusted totally on this contest. For me, it is a lesson on how to concentrate and, if you are really into it – how to win.”
--

N5TJ and K1TO operating as OJ3A fended off a very close challenge from Igor Booklan, RA3AUU, and Andrei Karpov, RV1AW, who claimed the silver. The Americans had a score of 1,626,900 to the Russians 1,620,760. A difference of only 6140 points. W6AQ says that regardless of the numbers, these operators are dedicated to the sport of radio:

--

Dave Bell W6AQ: “The two winners this year, Jeff Steinman, N5TJ, and Dan Street, K1TO, also won last year and they won the one before that. And it was not surprising to me, ehen I came to their shack and watched them operate.”

“When I showed up there, Dan Street was the second operator and he noticed me come in and he nodded. I brought the camera up and came right around in front of Jeff Steinman. I was basically between him and his co-pilot. In fact I was actually looking at his face and I am not sure to this day that he even knew I was there – so concentrated was on listening and talking.”

--

The German team made up of Frank Grossman, DL2CC, and Bernd Och, DL6FBL, finished third to claim the bronze with a score of 1,614,591. All of the scores are on the web at www.wrtc2002.org. No announcement yet as to the venue for the 2004 WRTC games. (ARNewsline ™)

**

HAM RADIO STATS: NO GROWTH

The numbers are in and the word is -- stagnant. That about sums up the growth in ham radio since the introduction of a restructured United States Amateur service April of 2000. Amateur Radio Newsline's Henry Feinberg, K2SSQ, takes a close look at the numbers and what they mean:

--
The numbers come from the interpreter of the numbers. And W5YI Report Editor Fred Maia in Dallas Texas says that growth in ham radio is at a standstill.

Maia has been right on the money in his predictions over the years, and he looks back at the past two years in his newsletter. And in it, Fred says that there are just about the same number of Amateur Radio operators under FCC license now as there were in the spring of 2000. That's when the service was restructured.

In April of 2000 there were 678,539 holders of Amateur licensees in the United States and its possessions. In June of 2002 the number was 680,342. Taking into account attrition from people not renewing for any number of reasons, that's a net gain of only 1803 new hams over the past two years. Not allot, but there is a good reason. Keep listening.

Maia breaks the numbers down by license class. In April of 2000 there were 50,077 holders of Novice tickets. In June 2002 there were only 39,930. A loss to the license class of 10,147 but not necessarily gone from ham radio. Why? The numbers for General and Extra kind of tell the story. General is up by 27,037 and Extra by 20,282 since restructuring. Chances are that most of the new holders of General class are probably the results of upgrades by Novices and Technician's wanting a wider range of high frequency operating privileges. This is born out by looking at the numbers for the Tech license which is also down by about the amount General and Extra are up.

So its really been two years of ham radio musical chairs and that was not unexpected. It takes time for as massive a change as the restructuring of 2000 to settle in. It will be the next set of numbers a year from now in 2003 that will really tell the story.

Are we up or are we down? In 12 months we should have the answer.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

The complete set of statistics can be found on pages 7 and 8 of the July 1st W5YI Report. (W5YI Report)

**

SPECTRUM: FCC PROPOSES ALLOCATION AND SERVICE RULES
FOR THE 71-76, 81-86, AND 92-95 GHZ BANDS

New rules may soon be on their way for a set of super high frequencies. David Black, KB4KCH has the details:

--

The FCC has proposed a Notice of Proposed Rule Making designed to promote commercial development and growth of the millimeter wave. This, in the spectrum in the 71-76, 81-86 and 92-95 GHz bands.

This millimeter wave band is also known as the Extremely High Frequency or E-H-F band. It refers to radio signals between 30 and 300 Gigahertz, where the wavelengths range between 1 and 10 millimeters. Research sponsored by the U.S. government has led to the verge of being able to use millimeter waves economically.

One advantage of using this frequency band is that the beams can be tightly collimated, easing channel sharing. Another important consideration is increased path loss due to oxygen and atmospheric absorption which can perhaps be viewed as a positive in terms of frequency reuse for wide dispersal applications such as high speed data transfer.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.

--

If enacted, the new rules will be under Parts 15 and 101 of the Commission's Rules. (FCC, CGC Communicator)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7KSO repeater System serving all of Northwest Arizona.

(5 sec pause here)

**

HIGHER AMATEUR VANITY CALL SIGN FEE EFFECTIVE SEPTEMBER 9

The FCC has officially set $14.50 as the cost to apply for, renew or reinstate an Amateur Radio vanity call sign. According to the ARRL Letter, a Report and Order adopted July 3rd says that the new fee schedule will become effective for applications received on or after September 9th.

The current vanity fee is $12 for the 10-year license term. The FCC had proposed the new, higher fee in a Notice of Proposed Rulemaking released March 27th aimed at setting all Fiscal Year 2002 fees. Again, the new higher fee ineffective on September 9th. (ARRL, FCC)

**

ENFORCEMENT: FCC ACTS ON CALIFORNIA REPEATER INTERFERENCE ISSUE

A California ham appears to have decided to quit ham radio rather than fight allegations that he was the source of interference to a repeater. FCC Special Counsel for Amateur Radio Enforcement, Riley Hollingsworth, explains:

--
Riley Hollingsworth: Hollingsworth: “We opened an investigation of interference allegations against Steven Holt, KE6WSJ, of West Hills California. That matter involves interference to the WB6VBV repeater in Palmdale California. We have been contacted by Mr. Holt. He informed us that on the advice of his attorney, he was submitting his license for cancellation.” (RAIN, FCC)

--

ENFORCEMENT: FCC ACTS ON ANOTHER CALIFORNIA REPEATER INTERFERENCE ISSUE

But Holt is not the only individual involved in a California repeater related issue that the FCC is looking at. Another is Leobardo C. Coronado, KC6PXL, of Sun Valley California. Again, the FCC’s Riley Hollingsworth:

--
Hollingsworth: “Coronado is coordinated for operation on 145.120 Mhz but links to 224.160 Mhz on which there is a coordinated repeater receiving interference.”
--

Hollingsworth’s letter to Coronado said that the FCC had evidence that the repeater operator had taken no action to alleviate the problem even though he had been advised of the interference numerous times. The FCC gave Coronado 20 days from receipt of its letter to write back and advise the regulatory agency about the coordination status of his repeaters and what has been done regarding any complaints. (RAIN, FCC)

**

ENFORCEMENT: FCC QUESTIONS CALIFORNIA CLUB CALL SIGNS

And in yet another California matter, the FCC has requested that Long Beach resident Richard Crow, KB6IAT, justify a pair of club call signs for which he is listed as trustee. The calls are WB6FCC for an organization identified as the Richard Burton Amateur Radio Club and WB6JAM for a club called Jammers for Jesus.

The FCC gave Crow thirty days from the date of its June letter to provide justification as to the need for each of these call signs. He was also directed to furnish the Commission with a list of the names, addresses and telephone numbers of the members of the two clubs. Also, the meeting times and dates within the past year, proposed meeting times and locations within the coming year, and copies of minutes, if any, taken at meetings within the past three months for each club. Crow was told that the FCC would cancel the two call signs if he did not file a satisfactory response. (FCC)

**

EMERGING TECHNOLOGY: WORLDCOM AND UU-NET

Even if WorldComm files for bankruptcy it will have little effect on the way the Intrernet operates. This even though the troubled financially strapped telecommunications giant controls a big chunk of it. Jim Damron, N8TMW and Jeff Clark, K8JAC, have more:

--
WorldComm officials say that even if the company goes under, the Internet will keep running. This, after market analysts predict WorldComm will file for bankruptcy following a major accounting scandal.

The telecom giant handles half of the Internet's U-S traffic through a subsidiary known as U-U- Net. Newly elected WorldCom C-E-O John Sidgmore says that U-U-Net -- will keep going no matter what happens to the WorldCom parent corporation.

According to Sidgmore, U-U-Net handles more than 50 percent of U-S Internet traffic. This includes about 70 percent of all e-mails sent within the United States and half of e-mails sent in the world. Thousands of companies and agencies in more than 100 countries rely on WorldCom for Internet access, including the United States Department of Defense and the U-S Department of State.

--

The bottom line. The Internet and your e-mail are safe even if WorldComm goes away. (Published news reports)

**

SWAP MEETS: HAM LICENSE A MUST FOR SELLERS AT TRW SWAPMEET

The TRW Radio Club passes along a reminder notice that every seller at its famed monthly Swapmeet must show a copy of his or her valid Amateur Radio license in order to receive a seller's permit. This restriction is for sellers only. Those coming to browse or make purchases are not subject to this rule. The T-R-W swap-meet takes place monthly in the Los Angeles California area but draws buyers and sellers nationwide. (TRW-ARC Via e-Mail)

**

UPCOMING EVENTS: HAM RADIO AT THE SOAP BOX DERBY

Ham radio will be a part of the 65th running of the All-American Soap Box Derby. This, in Akron Ohio on Saturday July 27th. To commemorate the event, members of the Cayahoga Falls Amateur Radio Club will activate special events station W8D from 2000 to 2400 hours U-T-C from
July 22nd to the 26th. On the day of the race W8D will be on the air from 1200 to 2000 U-T-C. Look for this one on 7.275, 14.250, 21.275 and 28.340 MHz and Q-S-L to Post Office Box 14, Cayahoga Falls Ohio 44222. (Press release)

**

UPCOMING EVENTS: FORT TUTHILL HAMFEST

And finally one not in Ohio. How about Flagstaff Arizona the weekend of July 26th, 27th and 28th. That’s when the Fort Tuthill Hamfest and Arizona State ARRL convention takes place at Flagstaff Airport oat exit 337 on Arizona State Highway 17. Aside from the usual hamfest fare, the Fort Tuthill gathering has something very special to offer. The clean air of the Arizona mountains and a truly breathtaking majestic nighttime sky. And less we forget, there is the famed Fort Tuthill Saturday evening Barbecue that makes people want to come back for more.

And less we forget, there will also be a wedding taking place at this years Fort Tuthill Hamfest. The groom is James Pastorfield, KB7TBT. The bride is Laura Lindstrom, KD7KYO. They met during an emergency in which the local ham community was involved. Not a ham at the time, Laura was assigned to ride in Jame's vehicle. The wedding is scheduled for 5 PM, Saturday, July 27th. They hope to honeymoon at the Grand Canyon. You can see lots more at www.acra-az.org on the world wide web. (ACRA, ARNewsline™)

**

POST-IT NOTES CAUSE PROBLEMS

Warning: The effect of Post-It Notes on archived material is devastating. According to the Scripps Institution of Oceanography Library in La Jolla California the glue on Post-It notes eventually hardens and leaves a film that becomes acidic. This results in eventual discoloration and brittleness of the paper. In fact, Post-Its left for more than a month or two on already brittle paper such as old books can cause the paper to tear when the notes are removed. (CGC Communicator)

**

HAM RADIO IN SPACE: LANCE BASS IN TRAINING FOR ISS VISIT

Will a teen heart-throb be the next tourist in space? Possibly as Russian space officials soften their previously tough line on the much-hyped plans for a commercial flight to the international space station this October by pop singer Lance Bass.

Bass has already undergone at least two medical examinations and is now doing a round of intensive training at Russian space facilities. Two weeks ago, the 23 year old member of the group N SYNC began training in Russia at the Star City Cosmonaut Center near Moscow. A few days later, Music Television News reported that as part of his training, Bass would be dropped into the Black Sea for an emergency-splashdown test. He was also to be left in a Russian forest without food and supplies. He must also become fluent in the Russian language,

spacecraft flight control systems and standard operations of the International Space Station as a pre-requisite to fly.

The decision by the Russian agency to explore the possibility of Bass' flight was based on the idea that the $20 million ride would have one or more corporate sponsors. So far there is no word as to whether or not Bass would be willing to get his ham license and operate the ham station on board the I-S-S. (Published reports)

**

INTERNATIONAL - CANADA: VE1QJ APPOINTED ASSISTANT DIRECTOR

Maurice Le Blanc, VE1QJ, has been appointed as an Assistant Director for Radio Amateurs of Canada’s Atlantic Region. Le Blanc lives in St. Basile, New Brunswick province and is retired from the Université de Moncton where he taught English as a second language. He is also fluent in French, English, Spanish and German and has been licensed as an amateur since 1950. (RAC)

**

INTERNATIONAL: UK CONTEST WINNERS ANNOUNCED

The UK results of the special Marconi Centenary Contest that took place in December last year have now been released. This was a 'one-off' event to commemorate the centenary of Marconi's first trans-Atlantic contact between Canada and Great Britain.

The overall U-K winner was Dave Cree, G3TBK, with a total of exactly 400 VE QSOs. The UK winner of the 100-watt section was GI0KVQ with 149 Canadian contacts, while G4ELZ made an excellent 110 VE QSO’s and took the QRP prize. (GB2RS)

**

HAM HELP NEEDED: QSL’S LOST AS LIGHTNING STRIKES

Back here in the U-S-A, Don Moss, NL7CO reports over the VHF Reflector that Scot Sharp, KD5OMJ, was away on vacation when his house was hit by lightening. Moss says that it appears as though it entered the house through the ham shack modem line.

As a result of the ensuing fire, KD5OMJ has lost all of his logs and QSL cards and he is asking hams who had a QSO with him, to please send him a new QSL. This, because without logs he is not able to determine who he has talked with. Both Sharp and Moss are residents of Lawton Oklahoma. (VHF Reflector)

**

DX

In D-X, word from Ron Moorefield, W8ILC, that he along with K8FL, K8LEE, N9NS, W8GEX and WA8NJR will be operating between 40 and 6 metres as C6AJR from Eleuthera, Bahamas, between the 24th and the 31st of July. Modes will be on SSB, CW and PSK31. The team will also be in the IOTA Contest operating as C6DX.

QSL is via N8QET. (W8ILC)

Also word that DL4FCH, will be active, as DL4FCH/P from Pellworm Island from the 20th of July to the 2nd of August. Operation will be mostly on CW, and will include the IOTA Contest. (RSGB)

And word that W2SGX has become a VUCC awards checker in the central New York area. Carl says over the VHF Reflector that he will be available to check cards for VUCC awards at the Fingerlakes Hamfest on Saturday August 3rd. The venue is the Tompkins County Airport in Ithaca, New York from 10:00 AM until 2:00 PM Eastern Daylight Time. (VHF Reflector)

SUPPORT FUND REPORT WITH ANDY JAREMA, N6TCQ

And finally this week, its time for another Support Fund report from Administrator Andy Jarema. This time N6TCQ is not asking for funds. Just some advice:

--

Hi. I'm Andy Jarema, N6TCQ, your Amateur Radio Newsline Support Fund Administrator.

For the past several months, a number of you have written to us -- asking why we are not using on-line payments for Amateur Radio Newsline donations? Well, we have given it a lot of thought. And each time, we end up asking ourselves the same question: does the price tag to establish and maintain this service justify the additional cost?

No matter whose services we use, there are set-up and monthly usage fees for the secure e-commerce web server. And our bank will charge us 3 to 5 percent for every credit card transaction they process.

The answer is simple. Supporters would have to donate enough using this method to break even. Only after that could your generosity be put to work.

So for the next several weeks we'll be asking for your input. Would you use your credit card on-line to support ARNewsline?

Send your answer to newsline@arnewsline.org. If you are reading the Internet version, just click on the link shown. mailto: newsline@arnewsline.org.

Type "YES" in the subject line if you would use this service. If not, type "NO." Feel free to make any comments in the body of the e-mail. We'll tally the results and report to you in a future Amateur Radio Newsline report.

Remember, Amateur Radio Newsline is a 501(c)(3) corporation. Your donations are tax-deductable and your support is always appreciated.

That's it for this week. I'm Andy Jarema, N6TCQ.

--

In case you missed those instructions you can find them in the print edition of this weeks Amateur Radio Newsline report. (ARNewsline™ Support Fund)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline™. Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline™, P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Hi,
.

I am a Ham Radio Operator. I am looking for tubes that I can use in some of my older radios. I don't want antique stuff, just regular useable tubes.

If you have any , please let me know. I will pick them up and pay you something for them. If can't pick them up, I will pay for the UPS or Post Office shipping.

Thanks,
Bill

Jeez, I guess the D104 helped the satellite monitoring a lot, huh.
LOL. I don't think anyone is "jumping to conclusions" here. It's
pretty easy to read your old posts and see you had the RCI and the
other CB modded for the freeband. Why lie about it? Actually, it's
pretty common that freebanders (I call them "freeloaders") obtain a no
code tech ticket (i.e. no HF) but continue freeloading on the side.
These are the kind of hams that the ARS doesn't need in their ranks,
because they don't respect FCC rules or federal laws. OTOH, if you've
given up freeloading - that's called growth - and I won't hold it
against you. In that case, why you defend and condone freeloaders is
even more of a mystery.

> registered to that car, you would be illegal.
> Haven't you wasted enough bandwidth on many newsgroups with your type of intimidation??

Very thoughtful. But the larger question is why an astonishingly
sizable group of people continue to devote large amounts of time and
personal resources to stop me from posting pro-legal CB opinions.

If illegal CB were such a "trivial issue" in the larger scheme of
things, you would think one man's protests against it would be pretty
much ignored, right? Wrong. Instead, dozens of pro-illegal activists
pop out of the woodwork with innumerable threats, bizzare defenses, and
vows to "shut me up".

Can I take credit for the result? No, in all honesty, the staunch
"defenders of illegal CB" are the folks that deserve the credit for
transforming this newsgroup into what you see today.

Sincerely,
-Aaron-

2011. 23 channel CBs wanted

Newsgroup: rec.radio.cb

Hi,

I'm looking for donations of older 23 channel radios that many folks might have gathering dust in a closet. A local crime watch group is looking for some short range communications. If you can help out, please contact me. All items would be accepted as-is but please let me know if the radio has a problem so that I can try to fix it.

Thanks - Bob (email: emergencyradioserv@yahoo.com)

>public service band.

Well that makes sense: why even bother to modify a 2 meter ham rig
when you can just pick up a cheap old Wilson or Regency that will
cover the VHF-Hi business/police spectrum, complete with CTCSS, for
$50 or less? And yes, there are a very few idiots that actually did
such a thing, and screwed with emergency communications in the band.
They were prosecuted under criminal laws, not Title 47. That's because
just about every state has statutes making such type of interference a
felony, and it is VERY well enforced. That's why you see little abuse,
if any, of modified 2 meter radios.

Research. Please find a post where I am using an amp with the 2950 I used to have.

You really have no life, do you? Doing Deja searches to see what you can post about... here's an idea. Do you see that button that says "Start" in the bottom left. Click on that, select "Shut Down" and click on "Shut Down"... then go to your front door, open it up and enjoy the great outdoors.

Let's see you tackle the original topic without trying to do character attacks. You probably can't. I also challenge you to reveal your true identity. We already know you are a Comcast cable modem subscriber and that you use Microsoft Outlook for newsgroup browsing (poor guy).

Just to refresh your memory, which seems to be failing... my original post stated that 2m radios are just as easily modifiable as "export" radios and they present more of a problem because they have the ability to interfere with public safety frequencies, whereas "export" radios will transmit in frequencies that aren't even in use. Why not crack down on those radios?

Now, if you can tackle this topic, I'd be suprised.

Guess I hit the nail on the head ! Look at how you respond ! But I
still maintain that any good ham knows that the " roger beep " junk
being made is not intended for ham radio , but for illegal CB use
and out of band use. As radios go , the stuff is JUNK . Out of band
operation causes problems to legal operation . Any CONCERNED amateur
radio operator , which your not , should be pleased with any FCC
response to the use and sale of this " roger beep " JUNK.

Actually if you look at history the FCC allocates bandwidth when a band is too crowded and dealocates bandwidth when there is lil or no usage. Right now the big money is in wireless WANs and LANs with new technology like bluetooth etc. Throughput is the key to high data transfer speeds and that means the upper end of the spectrum. You hames need to worry about the bandwidth above a gigahertz cause the FCC will sell that in a second. I love when you guys keep looking at 11m while the FCC is carving up your realstate up top. CB radio is growing in leaps and bounds. The FCC will have to give us another 80 channels. It is just a matter of time. When push came to shove we got 40 channels and the anti-cbers still cry about it. The reason we got that was you guys left it alone and freebanders when in and took it and had the numbers to keep it. You anti's keep forgetting that government exists to serve the people and not visa versa. The people on cb need 80 more channels. The clowns at FCC need to allocate then and Hollingsworthless tarries at his own political peril.

1. You have not proven that the 'freeband' freqs are unused. The FCC contradicts you. Frequency allocation records contradict you. All you offer is your subjective testimony that you "don't hear anything".

2. Widespread interference to public safety services by 'freebanders' or rogue hams using 2 meter gear does not exist. Conversely, widespread radio piracy by 'freebanders' using phoney export radios does exist.

BTW, this line of argument by 'freeloaders' has been tried before and failed. (It basically goes: "We know we're guilty, but if you try and stop us, the innocent are gonna have to suffer along with the guilty" etc.) Adopting this particular stance just makes you appear more unsavory by the moment.

Here in my area, there is a mish-mash of freq's used. Henry County
uses vhf 150 Mhz area, as do most of the surrounding counties. Lucas
County uses some 450 Mhz as well as a trunked 800 Mhz system.

There has been some fool lately that has been kerchunking the machines
in Lucas county and now in Fulton County. I doubt he is a ham, because
if he were he would know how to add tones to get into the machines
when we put tones on to stop him.

I have a feeling he is in a similar situation to a guy here in town
who bought a scanning triband at a local hamfest at the advice of a
salesperson, to use as a scanner. Expensive scanner, when he could
have gotten a regular scanner much less expensive, and that scans much

faster. Anyway after he bought this radio, he realized it was worthless for what he had in mind, I tried to buy it off of him, as I was afraid of its falling into the wrong hands. Unfortunately someone got to him with cash before I could cash my paycheck. It was a brand new VX-5R and he said he'd take $150 for it, not bad. But someone beat me to it.

==

Seems like you are the one begging for figures.

Try:
Radio Handbook, 23rd Edition, p3-8.

==
> Of course that will never happen,
==

Wishful thinking... huh.

==
> >See above, regarding your failure to observe a basic fact.
> >Or did you mean to ask "who is more significant, brain or Yeti"?
> >I feel that is your real issue here.
>

> ...or maybe you can calculate the difference in the resistance of a
> wire at DC and 27MHz,
==

Depends upon the material, as this affects the depth of penetration.
For 22awg copper wire, the skin effect decreases the area actually
conducting to around 0.024mm² at 30MHz. This multiplies the
resistance by about 13.5
Not only does it increase the risistance, but the wire effectively
becomes a cylindrical conductor. This increases the inductive
reactance... from the ref below, 1.27 Ohm / cm of #22 copper
wire at 30MHz.

Also, the radiation resistance of an antenna drops as the antenna
length is reduced compared to the wavelength... so the radiation
resistance will be rather less than 50 Ohms, and can be as low
as a few Ohms.

REFS:
http://wwwrsphysse.anu.edu.au/
Radio Handbook, 23rd Edition.

==
> Yeah, I didn't think so.
==

Thought wrong then, nowt new there.

In the UK, your CB radios are illegal to import, connect, use or even just
OWN. Possession alone is enough to have it taken away and destroyed.
But, for years, they have been available. People cannot get them from the
CB shops, so they get them from the CBer down the road who manages to get
them through. The difference is that the Government see no tax, and the
customer sees no warranty. I have known people get stitched up with bad
radios when buying out the back of a car in a car park, but usually they
will buy from someone they know.

People are now going more for the ones marked up as "Amateur Radio"
equipment. I do not know how a ban on "channel" readout leaving
frequency readout only would affect this. I could imagine that some will
not want to bother as others will shout out "go to channel... " and they
will get lost with frequencies, specially mobiles.
If America and the EU brought in a rule that made channel readouts illegal
on Amateur radio equipment, manufacturers may change the design to get
them through.
I could imagine this leading to the sales to CBers dropping, as many
CBers may not want them without a channel display. I wonder just how
many of these radios are used by licensed Hams just for the Ham band?

==

You can never stop those who are determined to do something,
to stop the majority has to be seen as a success.

==
> Many people are simply buying these exports rigs to
> use as simply a 40chn CB, instead of a 148 or Grant or Midland,

> Simply because Truckstops, internet& mail order places ONLY
> offer them, or "push" them.
==

I believe the reason for much of our illegal radio use in the UK may be attempts to "keep up with the jones" or just wanting what others have. There are those who use illegal radios just for the legal frequencies, I seriously have to wonder if they are playing with a full deck. I can understand those who like to DX on SSB, but not those who risk prosecution for something that can be done legally.

Manufacturers make products sell by making them attractive with controls and functions that you will never use (look at MS software packages), stopping sales could be just a matter of doing the opposite.
Making eqiupment illegal does not seem to stem the flow (how easily can someone get illegal drugs?), but making it unattractive may work.

Regards,

Peter.

But you said:
"once every few years"

I remember three addresses in the last YEAR... Two at "cet" and one
at "Tincan", when you claimed that your "cet" account was closed. I
cannot say how many you used before that, as I was not on the Net.

==
> If you have a family and a life, then what the hell are you doing

==

Trolling?
I have an interest in CB, that is why I use this group.

==
> Hell, if I was in your position I wouldn't
> have any time at all to troll around in here.
==

Usually, I post about three times a week... that's not much. This week, I
have had extra spare time, but I will be going back to about the usual now.
Even over the weekend, you will see that I may post early on a Saturday

morning (take account of time differences), then usually Sunday late afternoon (when my Son is at his martial arts lessons), or evening (when they are in bed).
From Saturday morning to Sunday morning I take over all duties with the children including all cooking etc, often I even cook the Sunday Dinner.

I am sure that we all have times when we feel that life "sucks", but then I see that there are people worse off than myself... no family to care about and return that care, and I realise that my life is great.
Next time I am reading my children a bedtime story, rocking my daughter to sleep, watching wrestling or soccer with my son or a video with my daughter, helping them with school work, taking them to the field to fly a kite, play ball, etc... I will appreciate it all the more knowing how lucky I am.

==
> >You would love to get me into one of those all night newsgroup argument

> > happen.
> >You will just have to learn to have patience and not to expect everyone
> >to be sat waiting for your every word... you just don't rate that highly.
>
> What did you smoke for dinner? I want some!
==

I don't smoke.
I have better things to spend my money on but, as I don't want to rub it in, I will avoid the "f" word meaning close relatives..

Don't you remember that argument you had with someone... the fast fire round. Yep, I agree, no worse than the other person as they were going at it just as furiously as you.

==
> I really don't care what you do. If you killfile me after you
> have painted yourself into a corner,
==

Sure, that's why you suggested it... like it wasn't on your mind, the "autotype" function on your computer took over.

But wait a minute...
<yeti@REMOVEcet.com> wrote in message
news:3d36853d.21417564@news.cet.com...
> ...aw, the hell with it.
>
> **>> plonk <<**

Seems like I am not the one painting himself into a corner.
Or am I only as "plonked" as Randy was... bet you're reading this... huh.

==
> then the reason you need a killfile is
> obvious --
==

I have made it clear why I killfiled you, and others who are in my killfile.
Those in my killfile include people who only ever post "for sale" adverts
... you think that is running away?
Get a grip.

==
> Believe what you are told and follow the herd like the rest of the sheep.
==

I go where I want, and follow what I believe is right.
You already know that I do not believe things just because someone says so,
why else would I have had disagreements over certain issues if I believed
anything that someone said.

How about you, you seem to follow the "anti keyclown" line pretty
closely. You all seem to fall in line, regardless.

==
> I said that I have respect for anyone that has the courage to stand up
> and fight for what they believe is right.
==

How about when they break the laws of the country they are in at the time?
Or when they make innocent people the target because the cannot get to the
Government who they really have a problem with?

How about if the "keyclowns" believe that what they are doing is right...
not legal, but right?
Maybe they believe that the law is wrong, and are demonstrating that they
will not capitulate to an unjust rule or law (which it is, is clearly a bone
of contention). At least they are not killing people to get attention,
maybe that is the difference.

If someone takes the Bible as their guide, then the FCC rules are not God's
rules... but theft and murder are against God's laws. I do not know about
the religion of the "9/11" terrorists but, are both theft and murder
allowed?

==
>Nobody can tell me that these guys did this without any fear to overcome.
==

Same could be said of "keyclowns", there must be the fear that, after
spending all those $$$ on that fine equipment, Riley will take it from them.
How about the fine... sounds pretty stiff, worse than in the UK.
Yep, such a fine could bankrupt a person, that has to be a major
consideration.

The difference is that, with religious suicide attacks, they believe that
they will get a reward. Fear of punishment does not apply, as they

will not be here. If you believe that you will go to a better place, for your eternal reward, then death holds no fear.

==
> If you can't understand the culture, don't criticize someone that can.
==

If only you could live by that rule.
You and the other "antis" regularly criticise those who understand the "illegal CB culture", even if they are not part of it.

One rule for you...

==
> Like I said, I can respect courage, which is something that every
> person must face at some point in their lives.
==

I respect the courage of those who overcome fear and danger to save someone else, like firefighters.

==
> whiny nameless twits on this newsgroup that make every excuse in
> the book to abuse the rights granted them by the best country in the
> world, yet don't have the balls to put a name to their words. I'm sure
> that even you can respect that.
==

Sorry if this disappoints you, but I cannot respect people who steal and murder, regardless of their "reasons".
Did these people not abuse the rights given to them by America?

I didn't see Bin Laden put his name to the act, until it was worked out who set it up. And what of Bin Laden now? Well, having most likely emerged from the hole in the ground he was hiding in, he has run into hiding. I don't see him giving his life for his beliefs, just sending other people to do it while he hides away.

==
> Unless, of course, you are one of
> those whiney nameless twits.
==

How about those who use a false name on here, do you consider that different?
I thought that you, of all people, understood why so many do not give too much personal info over the "Net". Something about 'phone numbers and harassment?
The difference is that some of use have a family to consider (not intending to rub it in).

==
> Regardless, you seem to have a problem understanding what I said. It's
> not like I didn't explain it about a hundred times already; maybe my

> comments were posted at the wrong time of the month for you.
==

Just after that attack was the wrong time for anyone who was upset by the
deaths. If you have problems understanding that, then you must be one
very cold hearted SOB.
Maybe you did understand it, and just used it for maximum effect and upset.

Maybe having nobody to care about has made you a cold hearted SOB, but
we are not to blame for the life you made for yourself.

==
> >My Collins English Dictionary says:

==

Are you saying that the "World Book" does not contain facts?
Better tell that to all the people who have parted with money for it.

But, if you have another reference for the meaning of the word, please post
it... I posted the references I found. References to "Harry and the
Hendersons" will really not be taken too seriously ;~)

==
> >Depends upon which meaning of "Brainbuster" you are thinking of.
>
> Like it matters -- none of them seem to apply.
==

Try looking a bit harder, but you really cannot claim to "know" me, so
what "seems" to you does not count for much.

==
> Take it any way you want. Your interpretations have as much
> credibility as any other keyclown.
==

"other keyclown"?
Suggesting you class me as one... and proving that it is not a legality
issue, as I have clearly stated that my radio equipment is all legal to
own and use. I have even told people that they did not need a
linear, when they really wanted to know.
Strange thing is, you have said that someone gets abuse for being a legal
CBer on this group... the only abuse I get is from your lot, the
"antikeyclown" posse. I have no problems from anyone else, from those
taking the "middle ground" through to certain people who make it clear that

they use illegal equipment.
Nobody has attacked me for using legal equipment. Maybe it is because, although I will advise against linears, I do not attack them for what they have decided to use... or maybe you could just be using the wrong after-shave.

Brainbuster.

A man had just been laid off from work. He was standing on the railing of a high bridge getting read to jump off, when he happened to look down and see a little man with no arms dancing all around on the river bank below.

He thought to himself, "Life isn't so bad after all," and got off the railing. He then walked down to the river bank to thank the little man for saving his life.

"Thank you," he said. "I was going to jump off that bridge and kill myself, but when I saw you dancing even though you have no arms, I changed my mind."

"Dancing? I'm not dancing!" the armless man replied bitterly... "My ass itches, and I can't scratch it!"

Well, folks, it has finally happened.
The blondes of the world got together and have decided to take revenge
on the brunettes:

WHAT'S BLACK AND BLUE AND BROWN AND LAYING IN A DITCH? A brunette
who's told too many blonde jokes.

WHAT DO YOU CALL GOING ON A BLIND DATE WITH A BRUNETTE? Brown-bagging
it.

WHAT'S THE REAL REASON A BRUNETTE KEEPS HER FIGURE?
No one else wants it.

WHY ARE SO MANY BLONDE JOKES ONE-LINERS?
So brunettes can remember them.

WHAT DO YOU CALL A BRUNETTE IN A ROOM FULL OF BLONDES?
Invisible.

WHAT'S A BRUNETTE'S MATING CALL?
"Has the blonde left yet? "

WHY DIDN'T INDIANS SCALP BRUNETTES?
The hair from a buffalo's butt was more manageable.

WHY IS THE BRUNETTE CONSIDERED AN EVIL COLOR?
When was the last time you saw a blonde witch?

WHAT DO BRUNETTES MISS MOST ABOUT A GREAT PARTY?
The invitation

WHAT DO YOU CALL A GOOD LOOKING MAN WITH A BRUNETTE?
A hostage

WHO MAKES BRAS FOR BRUNETTES?
Fisher-Price

WHY ARE BRUNETTES SO PROUD OF THEIR HAIR?
It matches their mustaches

Certainly if you are a police officer in that area it is very easy to find
out.

Cross-posted to: rec.radio.cb,rec.radio.swap

For Sale: Three section base antenna in three easy-to-assemble section and covers far above and below the traditional CB channels, can be used for 10-meters amateur radio equiptment and withstands up to 2000 watts of power, easy SWR calibration with two rings. 9.9dBI gain total size 17ft 41/2 inches weighs only 2.2 Kgs. I might still have some coax to go with antenna, and I will throw that in if I can find it. Asking $50 obo. Used for only a couple months. Buyer can pickup (Portland, OR area) or will ship. Please email me with questions or offers.

thanks,
LP

Actually we just got primary at 2.4 GHz for satellite work.

Now for the 102nd or so time, Mad Richard's history of 11 meter Amateur
operation from one who was there in 1958.

The 11 meter Amateur Band was assigned in 1947 in ITU Region 2 (the
Americas) only to balm the wounds of having 20 meters cut back to 14.35
and to bridge the gap until the 15 meter band was cleared of its Marine
users which took until May of 1954. It was 26.96-27.23 or what later
became channels 1 thru 22. So at no time did the amateur service have any
allocation in the freeband. The allocation was adopted in Region 3 (Asia,
Oceania) but never in Region 1 (Europe and Africa) so the DX offered on 10
and 15 made 11 a ghost town. We got the 12 meter band 24.89-24.99 and
some others as a result of a WARC in 1976 as a treaty band.

It is probably germane at this point to define what is meant by a treaty allocation vs a national or regional allocation. Most Amateur bands are treaty but a number are not. For example, there is no treaty allocation at 160, the 80 meter band is 3.5-3.9 by treaty, 3.9-4.0 by regional allocation, 40 is 7-7.1 with 7.1-7.3 regional and not available to US territory in ITU Region 3. Six meters is regional, 144-146 is treaty, 146-148 is regional. The 222-225 is national as will be the 5.25-5.4 new band when and if. It should be noted that 10 meters cannot be reallocated by the FCC no matter what.

It is hard to describe the situation in the mid-1950s unless one was there. First off the FCC had assigned VHF television by line-of-sight assumptions which proved so wrong as to result in a freeze of new channels and ultimately reassignment of Illinois outside Chicago, Indiana, and a good part of Ohio to UHF among other things. Second, business band frequencies were both very crowded in some areas and filled one's trunk with electronics at remarkable cost to get on them; the Motorola rigs of the vintage were not called 'coffin boxes' for nothing. A UHF CB service (Class A CB) was in existence at the time and about as popular as root canals; it exists today for the most part as GMRS and FRS.

This was attacked by splitting the FM channels of the period, 50 and 60 kHz in half which was later done again and by using the 11-meter ham band and 27.255 which was a radio control channel and repository of a lot of trash to create Class D Citizens band (B was withdrawn and C is Radio Control now in the 72-76 gap between TV channels 4 and 5 which was and still is to some extent protected as a UHF i.f.). As is apparent, the brains at the FCC were in other areas so the CB thing and rules were done by what appear to be summer interns or something of that ilk. The appearance of wideband FM gear is what started the repeater craze in the 2 meter band. So 1958 was a big year.

So Kenneth, the only thing you have right so far is that the FCC does generally try to promote communication as opposed so some parts of the world both now and historically.

Until the 1973 fuel crisis, double nickels, convoy, and some outlawry, CB actually worked pretty well for its appointed cheap, shared business purposes. So the FCC continued to work on expansion. TV intermediate frequencies were moved into the old and never-assigned TV channel 1 and the transistor made CB really functional for most casual users.

It was always expected that the service would expand but there were and are two impediments: existing assignments of business users and the fact that there is a second (actually also a third but they are irrelevant here) group that assigns frequencies. The FCC does not assign government frequencies. The Commission used the bi-Centennial to grab control over large blocks of call signs, hence my N prefix and the AA-AM prefixes (the US donated the rest of A in 1947) prefixes in the ham bands effectively kicking the Defense Dept out of the 2-letter prefix biz. And as it happens, 27.6-28 are Government freqs.

But expansion to 50-60 channels was in the cards in the short term and to 99 eventually. Now for a slight detour. While there is some controversy over why TV Channel 1 was never assigned, the official reason is that with the picture carrier at 45.25 and the pix i.f. at 25.75, the TV local oscillators would run at 71 more or less (no AFC in them days) and obliterate the sound carrier of Channel 4. In 1946 or so this was not as unreasonable as it sounds today. Now as noted, the CB people at the FCC were not the sharpest knives in the drawer and the question arose late in the Phase 2 expansion what would happen if a unit on Channel 1 (26.965 + 455 = 27.42) were near one on 41 and 42. So the expansion was chopped at Channel 40, 27.405.

Now after 25 years or so, there are two facts of existence: first is that anything of any significance whatsoever has long since moved off of 27 MHz, and second that CB has become such an embarassment to our government that there is no way any part of it will have a damned thing to do with it. So the odds of a legal expansion is slim and none.

What has happened is that the FCC has made Amateur tickets easily available to any real hobbyist, moved Radio Control, expanded other Personal Services and pretty well abandoned 27 to stew in its own juice.

I kind of compare it to a landfill in which all the useful items have been recycled prior to burial. Aside from checking now and again to be sure the crud does not combine to eat Detroit, no one really gives a hoot.

Dick NBK

Hi Kev,

Pros: Both ar nice radios if used on the 10 meter amateur band.

Cons: Both will put you at risk of a multi kilobuck fine if you use them as CBs.

That wasn't meant as a flame. I operated an AR-3500 on 11-meters for years, but things have changed. There appears to be a stepping up of enforcement on the FCC's part and they can really dole out some unjust justice in the form of very hefty fines. (And without true due process, I might add.)

Why not a TR-296DXB from Ranger? Or perhaps the TR-696F if you like a frequency counter.

http://www.rangerusa.com/tr-296.html

http://www.rangerusa.com/tr-696f.html

http://www.rangerusa.com/closeup966.jpg

I threw the TR-966 in there too. I think it looks pretty cool. Good luck. Take care and 73.

The last sentence is horribly inaccurate. The hobbyists generally work DX with around 30 watts or so. (The standard output for a RCI-2950, HR-2510, Magnum 257, AR-3500, etc.) Truckers and those on the "superbowl"/ch. 6 generally use amplifiers. This is the type of misconception that crept into the ignorant statements by the ARRL & NAB against RM-9807.

>For 22awg copper wire, the skin effect decreases the area actually
>conducting to around 0.024mm at 30MHz. This multiplies the
>resistance by about 13.5

That's called the ratio of AC to DC resistance, and it's actually
12.58 for 22 AWG copper at 27 MHz. But did you notice that for 16 AWG
that ratio increases to 25.36? That's because the AC/DC resistance
ratio increases with wire diameter! Or were you just ignoring that
little detail...

Now let's work these numbers in with the previous numbers for DC
resistance:

#22 has 16.459 ohms/1000 ft of DC resistance;
multiplied by 12.58 gives us 207.05 ohms at 27 MHz.

#16 has 4.094 ohms/1000 ft of DC resistance;
multiplied by 25.36 gives us 103.82 ohms at 27 MHz.

But we don't have 1000 feet, we just have maybe 30 feet in our helical
antenna. So;

(207.05 / 1000) * 30 = 6.21 ohms
(103.82 / 1000) * 30 = 3.11 ohms

So the difference in wire diameters for the same antenna is only a
difference of 3.1 ohms. That's a difference of only 6.2% in efficiency
between wire sizes in the helical type of antenna. Now let's compare a
straight 102" whip:

((207.05 / 1000) / 12) * 102 = 1.76 ohms
((103.82 / 1000) / 12) * 102 = 0.88 ohms

for a difference of 0.88 ohms, which is only a difference of 1.76%!
But even though the differences are marginally significant, I suppose
it might validate your original statement...

"...the wire up the centre is usuaully thin, which does not help with
the efficiency of the antenna..."

...except for the fact that fiberglass antennas are not "usually"
built with a "thin" conductor. I don't know how many of these antennas
you have cut, broke or disassembled, but most of them I have seen use
wire that is larger than 22 AWG. There are -very- few antennas that
use wire that thin or thinner.

>Not only does it increase the risistance, but the wire effectively
>becomes a cylindrical conductor. This increases the inductive
>reactance... from the ref below, 1.27 Ohm / cm of #22 copper
>wire at 30MHz.

The inductive reactance has absolutely nothing to do with radiation
efficiency unless it is so large that the antenna cannot be matched.
Now if you were to compare the inductive reactances of resonant
lengths of 22 and 16 AWG at 27 MHz... oh, but that would require you
to do some math, I'm sorry I asked.

Regardless, wire is a 'cylindrical conductor' whenever the radius is
larger than the skin depth. For 27 MHz, that's just about any wire you
can lay your hands on.

And it's funny that you didn't mention this, but the wire diameter has
an effect on bandwidth; i.e, a smaller conductor will have a narrower
bandwidth than a larger conductor. But again, in the context of the
continuing example, the difference is insignificant.

>Also, the radiation resistance of an antenna drops as the antenna
>length is reduced compared to the wavelength...

Sure, just change the length so it's no longer resonant. Are you
suggesting that you can't tune an antenna if it has a wire diameter
that is too large or too small?

The -resonant- length of an antenna changes according to the diameter
of the conductor. If you build an antenna using 16 AWG wire it will be
a different length -at resonance- than an antenna using 22 AWG wire.
But that difference (between 16 and 22 AWG at 27 MHz) is LESS THAN
1/10 OF AN INCH!!! Do you want to see the math for that, too?

> so the radiation
>resistance will be rather less than 50 Ohms, and can be as low
>as a few Ohms.
>
>REFS:
> http://wwwrsphysse.anu.edu.au/
> Radio Handbook, 23rd Edition.

Except you left out a few important details, like how the AC to DC
resistance ratio increases with wire diameter. What else did you
conveniently ignore? You don't do justice to your reference.

>==

So someone who uses radio is a cop? Guess there were lots of cops on 2m SSB
tonight.

>Jeez, I guess the D104 helped the satellite monitoring a lot, huh.

The D-104 was a left over from the CB days. Since I plan on eventually upgrading, I wired it up to the D-104 figuring that once I do upgrade, I could get right onto 10m.

>It's
>pretty easy to read your old posts and see you had the RCI and the
>other CB modded for the freeband.

I sold a CB modded for the freeband. Does that make me a freebander? No. If I had an illegal street racer and sold it, does that mean I do illegal street racing? No.

Source record: 131097
Cross-posted to: rec.radio.cb,rec.radio.swap,rec.radio.amateur.swap
Body handling: HTML body converted to readable text

The "roger beep" button on my Uniden HR-2510 is used to select a 500 hz CW filter since I didn't need it and I like a nice narrow IF for CW. My "pa" switch limits the output power to 500 mw for QRP and transverter use. Again, a much better use of the switch.

Although the use of "roger beep" is questionable for amateur use (say lid...), it is used by NASA during space communications on occasion and more than one repeater that I know of, I guess they are using junk too...

10 Meter rigs made by companies such as the Ranger, Uniden and Radio Shack have been some of most affordable mobile 10 meter options for many hams. Much better than the converted 11 meter Diamond (CB) AM/SSB rig which I used in the '70's in my car for 10 meters as a ham while in college.

With mods (filters, alignment, etc.) some of these "roger beep" rigs perform as well as many "ham rigs" besides being useful (and affordable) for more specialized uses (transverter, QRP, RTTY, narrow BW digital modes, remote control via UHF, etc.).

As a youth I modified WWII surplus / commercial VHF equipment that was designed for non-ham frequencies for amateur freqs. in the '60's. Should access and sales of that equipment been outlawed too? Should we outlaw just about every modern amateur rig and HT made in the past 20 years since about every one has OOB capability with minor modifications?

BTW, The first mod I do on a rig is make it OOB RX/TX capable (if possible), you never know when you might need OOB capability for transverter or emergency use (allowed under FCC regulations in certain cases to protect life or property). Lock me up...

I bet you are real fun at swap meets and hamfests enforcing your way from tailgate to tailgate... Scenario at next Dayton, "Is that a Uniden HR-2510 on your table? I'm confiscating it and calling the FCC, wait here and don't move..."

You want a real mission, go after the E-Bay sellers and sporting goods dealers that sell GMRS equipment for "higher power" FRS use without informing the user that they need a license. Now that sucks...

CUL,
-b

What like the name VHFradiobuff, many in the ng know who I am just ask them
they will tell you who I am and actually andy I know your not a police
officer. And I don't care what your job is other than you insinuating you
use police radios and can talk to them any time you like.

... Kevin responds with, I talked with a DPS official, you respond with go find it yourself. Tough considering it doesn't exist.

It is tough to find laws that don't exist. I took the time and did some searching. I couldn't find a single reference to such a law Federal. Only thing I could find was Radar detectors are illegal in two states and legislation to outlaw them in two others is in the works. Aside from that Commercial vehicles may at no time use a radar detector. No nothing pertaining to flashing headlights or using CB to warn of an officers position while he is engaged in traffic duty (Radar, patrolling, ect) Now obviously if you walk up to an undercover cop and shout out "Heeeeeeeyyyyyy Andy shit you like terrible man. How's the wife and kids. Goddamn don't they pay cops enough to buy new shoes?" Then yeah you might be in some hot water. But giving away the position of an Officer on traffic duty is not against the law. Guess all those Southern California radio stations that encourage people to call in and let you know where the speed traps are set up, are in for trouble. They are reporting on the air the location of Officers, being a commercial broadcast station Not only would the police be on them but wouldn't the FCC be as well? Landsahrk gets the quote of the day:

"... Kevin responds with, I talked with a DPS official, you respond with go find it yourself. Tough considering it doesn't exist." Landshark

So if you don't hear anybody using a frequency -- it's OK to take it over? What the hell kind of a ham are you? Never mind, we already know.

It would be nice if we could all pick and choose what laws we obey or disobey based on if we feel a law has enough "proof" to be valid or not. But society doesn't work that way, Andy. If you feel a law is unjust, unfair, or puts undue burden on citizens, it is up to you to change it via the democratic process.

>>Adopting this particular stance just makes you appear more
>>unsavory by the moment.

>Gee, I don't want to appear "unsavory" to you Aaron.

OK, you're being sarcastic. But if you don't care what I think, then why are you fighting to prove that "freebanding" is justified?

Legit use of 10 meter radios such as the ones you name above is acknowledged. But for a real eye-opener go to www.copper.com and see what kind of radios are being pushed on CBers. They are calling them "10 meter radios" these days, complete with 40 channel selectors, 15 kHz channelization, talkbackm and roger beep.

Do you recall the cause of restrictions placed on RF amps covering 10 meters? Well, hams again have to suffer with more restrictions, this time on legit 10 meter transceivers, thanks to the abuses of outlaw CBers.

Don't take my word for it. Below is an excerpt from the FCC CALL CENTER script dealing with this issue.

-Aaron-

---

2. NON-APPROVED C.B. RADIOS

Q. What is a legal C.B. radio?
A. All radio transmitters and receivers which are intended to operate on the 27 MHz Citizen's Band (C.B.) channels must be approved by the F.C.C. before they can be imported, advertised, sold or used. The manufacturer must be issued an F.C.C. grant of equipment authorization, called "certification", as indicated by an FCC ID on each unit. If the radio has a label showing an FCC ID, and the ID can be verified by checking the Equipment Authorization database on the F.C.C./OET Web page, then the radio is legal.

Q. What kind of radios are illegal to use on the C.B. radio channels?
A. Any radio transmitter, receiver, or transceiver which is designed by the manufacturer to operate on the C.B. radio channels, but which has not been granted an F.C.C. equipment authorization is illegal. These non-approved radios may appear in several different forms:
1. "10-Meter Amateur" radios, which have been designed so as to be readily alterable to operate on the C.B. radio channels, and/or on other non-amateur frequencies in the frequency range from about 24 to about 32 MHz;
2. "Export" or "full channel" radios, which are designed to operate

over all, or a portion of, the radio spectrum from about 24 to about 32 MHz, including the 27 MHz C.B. radio channels; or
3. F.C.C.-approved C.B. radios which are designed so as to be readily alterable to operate on frequencies in the range from about 24 to about 32 MHz, which are not assigned to the 27 MHz C.B. Radio Service.

Q. What do you mean by "readily alterable"?
A. This means that the user of the radio can add, or change, its operating frequencies by simply flipping an internal switch, by clipping the leads of, or installing, a simple component such as a diode, resistor or jumper wire, by installing, moving, or removing, a jumper plug, by connecting or disconnecting a connector, by replacing a plug-in semiconductor chip, or by programming a semiconductor chip using special access codes or an external device, such as a personal computer.

Q. What are these other frequencies between 24 and 32 MHz used for?
A. These frequencies are assigned to many different licensed radio services, both in the United States, as well as in other countries. Authorized users include Maritime and Aeronautical radio stations, standard time and frequency stations, international broadcasting stations, amateur radio, and government stations. A portion of this spectrum is also allocated to radioastronomy, where scientists are attempting to listen to very weak radio signals coming from distant stars and galaxies. No radio transmitters of any kind are permitted within these radioastronomy bands, so any earth-bound transmitted signals can completely disrupt radioastronomy observations.

Q. I don't hear any other stations on "my" frequency, which is not one of the 40 allocated C.B. radio channels. So what is wrong with operating my radio station here?
A. You may unknowingly cause interference to legitimate communications. Many of these frequencies may appear, to the casual listener, to be unused. Some of the authorized users may be using emission types which can not be plainly detected. Or, their transmissions may be intermittent. You will not hear any legitimate signals within the designated radioastronomy bands. However, just because a frequency sounds clear, that does not mean that it can be used without proper authorization.

Q. Why do some people operate illegally on these frequencies?
A. Many of these frequencies may appear to be "free" of any legitimate users, so some people think they are "free for the taking". The illegal radio operators are commonly referred to as "freebanders", and use their radios as a form of hobby, similar to Amateur Radio. But for many reasons, these people choose not to obtain an amateur radio license. They operate on these frequencies because under certain weather and radio propagation conditions, their signals can extend all the way around the world, enabling them to communicate with other similar unlicensed stations.

Q. What can happen if the F.C.C. catches me operating on an unauthorized frequency?
A. You are subject to severe penalties, including monetary forfeitures, confiscation of your radio equipment, and possibly even jail time.

Q. I've heard that some of the "big name" amateur radio equipment can also be altered to operate on non-amateur frequencies, including the C.B. radio channels. So why are these radios not considered to be "non-approved C.B. equipment"?
A. First, it must be emphasized that use of this type of amateur equipment on unauthorized frequencies, including using it on the C.B. radio channels or other non-amateur frequencies in the 24 to 32 MHz range, is illegal, and doing so will subject the user to the same penalties as mentioned above.
That being said, there are legitimate reasons for some amateur equipment to be used on certain non-amateur frequencies, such as on military M.A.R.S. (Military Affiliate Radio System) and C.A.P. (Civil Air Patrol) frequencies. MARS and CAP radio stations are only authorized to operate on specific assigned (non-amateur) frequencies. With just a few exceptions, most of the assigned MARS and CAP frequencies do not fall within the 24 to 32 MHz frequency range. Although some models of amateur equipment (manufactured by companies such as Alinco, Icom, Kenwood, Ten-Tec, Yaesu, etc.) may be capable of operating on the C.B. radio channels, they do not display the assigned C.B. channel number, nor are they designed to deliberately facilitate operation on the C.B. channels.

OK. Apparently you cannot find any specific statutes in California to
cite - and probably not Texas either. Otherwise, I think you would have
posted the cites to terminate the argument.

Try Oregon. You won't find any such statutes here either.

>> Please cite that law (California), your fond of that statement.

The answer, according to my local police Captain friend - is a resounding
"NO!". He says the myth has been around for many years - and is being
continuously spread by a bunch of ignorant fools that should know better.

> Yes, I know you find it the same as talking on the freeband who am I hurting
> lol. Like I said Landwhale I didn't write the law I am just telling you what
> is commonly practiced across the Usa.

Commonly? So far, all we have is your claim. You have not provided a single
federal, state or local cite to substantiate your statements. Until you do,
it is just a bunch of hot air.

The archive at newsone.net doesn't accept cancels (or no-archive flags
either). Go there and find it.

Thank you both. Welcome back, Mark. That's what I tried to impart.
Some like to rewrite history, but I make a poor revisionist. I prefer
to say it "like it is" rather than as "it oughta be," (Very
subjective!) as I'd like it to be, or the FCC's textbook definition.
It's no longer what the FCC intended and, IMHO, what the "Citizen's"
Band oughta be should be up to the...ready?...here it comes...yep, you
guessed it...the "citizen's!" I think the vast majority of CBer's have
indicated (Albeit to the wrong people.) what they want from their
11-meter communications. I just want to see them go about it the right
way. CB/11-meter enthusiast wield much more clout than they currently
realize. The trick is to get them to pull on the same side of the
rope. The trucker segment of CBer's alone possess a great deal of
pull. Many of the hobbyists and fmr. hobbyists (Such as your's truly.)
migrate to AR and just maintain a minimal presence on the CB. I'm
still willing to write a letter or two (Or three.) to my reps on
behalf of the CB though. (Or crank out a bumper sticker or two. <ggg>)
Oh well, we'll see. :-)

I think you are talking about Selma Alabama aren't you?

You know Ken, I actually kind of agree with you on this one. But Selma, TX was the only small town in the area with NO taxes. No school taxes, no property taxes and no sales taxes because of the speeding fine income. Sometime in the late 70's the state of Texas told them that they needed to share most of their "income" from speeders on the interestate because the state maintained the road. It was a big hit to their tax base!

> property or out of my receiver.

Sorry, that won't work either. Back in the early 80's when local microwave subscription television was coming out there was a flood of kits that a person could buy and build to receive this pay broadcasts. The same thing was happening to satellite television companies. The FCC quickly classified the broadcasts as "point to point" and made it illegal to receive these broadcasts. Satellite television companies pushed this too but for some reason it didn't hold. The FCC told them that if they didn't want backyard receivers to pick up their signals they should start scrambling them.

Several law enforcement lobies tried to get police radar classified as "point to point" as well making radar detectors illegal. Trouble is that a radar gun doesn't have a specific receiver on the other end so it can't be classified as "point to point." With that argument defeated at the FCC the FCC reminded many of the manufacturers that it IS illegal to use either a radio transmitter or a receiver (radar detector) to aid in the commission of a crime. So if states wanted to really push it, and some have, radar detectors can be made illegal.

I'm not. I've challenged you and others to prove that a modified "export" radio poses more of a danger than a modified 2 meter radio, but it seems like none of you kids are up to the challenge. The only way you can discuss anything is by changing what people say and attacking their character.

Please convince me how a modified "export" radio is more dangerous than a modified 2m radio.

Cite the Texas law then, simple. Now for the tougher
task..... Cite the federal law, you can't, because
there is no federal law. Now remember Kevin, federal
law always has priority over state laws, so cite that law
that says you can't use a cb to warn others of radar
enforcement.

Have fun,

Landshark

--
Freedom of speech, of the press, of association, of assembly and petition -
this set of guarantees, protected by the First Amendment, comprises what we
refer to as freedom of expression. The Supreme Court has written that this
freedom is "the matrix, the indispensable condition of nearly every
other form of freedom." Without it, other fundamental rights,
like the right to vote, would wither and die

You are correct on the under cover cop deal, it
will get you in trouble for that. The original statement made
was that it was against State & Federal laws to use a Cb
to inform others of a cop using radar, I said it wasn't against
any federal laws and probably most state laws too.
George responded it was against the law and the proof
was that you can't flash your high beams, Huh? where's
that coming from? Kevin responds with I talked with
Texas DPS.
I too have talked with a CHP (relative)
a Sheriff & city cop, even a local judge (all customers, remember George, we

do sell and repair motorcycles)
they all said No!, no such law exists either state or federal
that they have ever heard of, but all that is moot. I still
asked that they cite the law that exists for such a crime,
George had enough time to dig up ten to fifteen posts on VHFbuff, so I
figure he's had the time to find the law,
Kevin, well he's to busy busting people for illegal radio
ops (just joking Kevin :^))

Just going back and amusing myself with this thread... it's funny, you
claim to be "very familiar with all the PD's" in my area, but you are
not familiar with them enough to know that Toms River and Dover Twsp
are the same thing. What are your credentials? What do you do that
makes you "familair" (is that the French version?) with these "PD's"
and "most of the supervisors at them."?

I know I'm going to regret getting involved in this argumennt...but here goes...

The *radio* is not illegal, it's what you *do* with the radio that may or may not be illegal.

The Uniden HR-2510 is not an "illegal radio." It met the FCC requirements at time of manufacture as a 10-meter amateur transceiver and was marketed as such by Uniden. Back in 1989, I purchased this particular model of radio new from a licensed amateur retailer. There was absolutely nothing "illegal" about this radio, the purchase, or possession of same.

Of course, many chose to modify and operate this particular model of radio outside of the parameters under which it was sold. Further, many retailers chose to market this radio as a CB with "high power", "extra channels", etc. Such marketing practices are questionable, and such operation is obviously illegal.

Bottom line: the radio as it came from the factory was completely legitimate and legal. What was done after it left the warehouse may or may not be legal.

Aluminum is far superior to fiberglass in antenna construction. Consider that, before the government (CPSC) intruded into the marketplace, nearly all base station antennas were made of aluminum. The only exception was the Shakesphere Big Stick.

Fiberglass is a poor substitute. Instead of a large radiating surface (aluminum tubing), you get a thin copper wire which is surrounded by a foreign material.

> radios will transmit in frequencies that aren't even in use. Why not
> crack down on those radios?

Quite simple: The situation where hams are using modified 2 meter radios to
interfere doesn't exist! The instances of that are so remote, so isolated
that it is
NOT a problem! The use of modded CB radios and so-called "10 meter" radios
to operate outside the frequencies allocated to CB IS a problem because of
the
VOLUME of occurances. The difference, when taken on the whole, and in
comparison to the two radio services, is R E S P O N S I B I L I T Y! Yes,
I
could mess with the local police. I *could* worry the local ambulance
service.
I don't. 1) I am mature enough that the "jollies" gained from such
activity com-
pletely escape my understanding; it simply isn't "funny". 2) Such is
totally irres-
ponsible and dangerous. 3) The overwhelming majority of Amateur license
holders ARE responsible and mature enough NOT to get any thrill out of

engaging
in such infantile and stupid behavior.

Like so many "freebanders", you assert that such activities don't "hurt" anything since you are allegedly operating on frequencies that "aren't" used. But you don't
KNOW that they aren't used. Regardless, those frequencies are still "leased" from the Federal government by virtue of license--just like the 10 meter band is
allocated to licensed hams. Often these frequencies are allocated directly to the
US Government. Maybe, as you state, these frequencies aren't used, but they aren't "abandoned". For example, I KNOW that the area just below CB channel 1 is used by USAF's auxiliary, Civil Air Patrol. How do I know that? I am a member of that organization. Their primary responsibility has been air Search &
Rescue. For example, the first photos of the World Trade Center were taken by
CAP. I know from personal experience that these frequencies have been inter-
ferred with by illegal CBers. One instance was during a live air search. These
frequencies are used as tactical and close-in work. One is a 100 watt SSB frequency for work out to about 30 miles or so, another is often used on low power (50 watt) AM for flight line comms, administration, courier--all kinds of
support activities. This relieves the VHF FM circuits for air-ground, base to mobile--traffic directly related to air operations. These frequencies are NOT used every day, and traffic is sporadic; after all, planes and people, for example,
don't turn up missing on a regular basis in the same area. As a communications
officer, I use those HF frequencies as part of my local communications plans be-
cause they ARE effective for close-in comms, and they don't readily lend them-
selves to monitoring by scanners. Eventually, these frequencies will be encrypted
thanks to 9/11. If I hear somebody "10-fer thar, mercy me thar, go 'haid thar" on
those USAF frequencies, I'll drop a dime on the SOB in a heartbeat! I have be-
fore, and I will again. Yep, there's overseas stuff on there, too, but I can't do anything about that except forward reports to proper headquarters.

It all boils down to discipline, responsibility, and respect for other users. While I
can't do anything about those "freebanders" above CB 40, I can report bandits
(thieves) on those frequencies for which I am licensed.

Finally-----and this has been used before and IS valid inspite of the attempts to
shoot it down----if you buy, or lease, a piece of property, but your work doesn't
allow you to use that lakefront property except on vacations--maybe twice a year, does that mean it is OK for just ANYONE to squat on that property, invite
themselves to use your lake cabin, eat the food you stocked there because you
aren't "using" it? NO! It does not! And it is NOT OK to "invite" yourselves onto
others' frequencies simply because you "think" they are not being used.
That is the reason for the rules that exist--reasonable rules, actually, to provide for "fences" that keep interference to a minimum just like real fences keep cows from
wandering onto a neighbor's farm and eating grass intended for that farm's cows.
What a concept! Rules that allow all with a need, and even some with-OUT a need, to use radio. Yet, there always seems to be those who are never satisfied
with what they are given. They just have to have theirs and everybody else's, too!
That is why some of us get upset at the theft of frequencies to which the thief is
neither entitled nor welcomed to use. Get onto some of those frequencies (10
meter and certain military frequencies), if I hear it, my dime is at the ready.....

> Ken

(Sigh)

And where will these "80 channels" come from? The 10 meter band is governed
by international treaty, so it can't come from there. Those so-called
"freebands"
are, for the most part, governed by NTIA (National Telecommunications &
Infor-
mation Agency), and that agency is more powerful than FCC because it governs
the government's use of spectrum, and the so-called "freeband" comes under
their
authority.

You already HAVE a place to go. FCC DID allocate more! They are called
MURS and FRS! An excellent idea because they don't normally "skip", and
more people can be on the air on the same frequency at the same time without
bothering each other. It is baffling as to why truckers need 200-500 watts
to
talk to the next truck to find out where Smokey is while messing up somebody

else out in Hickville, Arkansas. But then, if the trucks migrated to VHF, chances
are they'd screw that up, too. Hmmm, you reckon that is why CB isn't getting
more than it has how--other than the fact that FCC doesn't even control the sur-
rounding space?

Andy, Andy, Andy. YOU brought up the idea of the "freeband" not being used by any legit stations.

> Please convince me how a modified "export" radio is more dangerous >than a modified 2m radio.

"Danger" is not the key criteria that causes FCC restrictions to be placed on sale or manufacture of equipment. Is it OK to transmit wherever you want as long as it poses no "danger"? Wrong.

Jerry said it quite well: a volume of cases where hams are using modified 2 meter radios to interfere doesn't exist. The instances of that are so isolated that it is NOT a problem. The sale and use of modded CB radios and so-called "10 meter" radios to operate outside the frequencies allocated to CB IS a problem because of the volume of occurances.

How many more people does it take to convince you that a lame "what's good for the goose is good for the gander" argument does not hold water?

-A

As I stated in another post but you ignored, even though it is easy
and cheap to get on a Public Safety Pool freq, the potential for abuse
is small because of the very fast and very severe consequences of
doing so. The lack of history of such abuse supports this conclusion.

As far as the possibility of terrorists interfering with public safety
communcations, that's not likely to happen because not only would it
be difficult and expensive to shut down all comm in one area, the area
would be isolated, the interference would be quickly identified even
with simple devices, and subsequently destroyed. Besides, they have
much more effective methods of causing havoc than making noise on the
radio.

The FCC makes that bold statement, not me. The hams in the group can explain to you why their licenses allow them to build and operate their own equipment from scratch, which includes designs that are "capable" of unauthorized operation. Conversely, CB equipment used by unlicensed CBers is required by law to be type-accepted, meaning no building, no modifying, no experimenting, no nothing.

Yes. Exactly.

Amateur Radio = accountable, identifiable, organized, willing to demonstrate familiarity with the rules, willing to demonstrate technical knowledge, self-policing, welcomes increased FCC enforcement.

CB = unaccountable, unidentifiable, unorganized, not self policing, not compliant with rules.

One service has more privileges than the other. Can you guess why?

double
> standard.

Perhaps, but it is a double standard that has existed since Marconi. If I
wanted to transmit on
PS freqs in days of old, I bought a crystal, BFD. With my trusty plug-in
coils and the crystal bin over at World Radio Labs my old John Meck T-60
transmitter would go anywhere I wanted it to go. Then I built a VFO!
Wowski.

Quite often, military, amateur, and commercial gear were and still are one
and the same. Collins will go virtually anywhere depending on the set up;
a lot of times only the control head differs on VHF/UHF gear and only that
to get it type-accepted or whatever the current blessing might be. My
first 2-meter rig was a Marine radio in a grungy green case selling on the
ham band for half or less of what the same chassis sold for in a neat
white case at the local marine shop.

This is nothing new. What is new is the attitudes and self-justifications for being an anti-social nincompoop. Essentially you are arguing for regulations to save one from himself.

Yes, life moves on. In the old days, one could kill a pimp and never see a cell; now it is an admired occupation. Perhaps in this lies the answer to your question.

Dick N&#65533;BK

>than one that can transmit in the "freeband"?

Sorry, agreeing to one fact doesn't automatically predicate agreement to another. Your "whole point" in starting this thread was to propose that I and others should not be concerned with "CB-10 meter radios" because a bigger threat to the spectrum exists from modded VHF radios.

This is false logic to begin with (e.g. one mustn't be concerned with small crimes because bigger crimes exist) and the same kind used by keyclowns (i.e. illegal ops) to justify their lawbreaking. Your argument that VHF radios constitute a threat is based soley on their potential, not any actual abuse.

You then set about to question the authority of FCC regulations for CB via purely subjective observations (i.e. the freeband "appears" to you, unused, therefore continued violation of international treaty, US Code Title 47, and FCC rules is justified and should be tolerated).

Now you're back to merely insisting that modifiable 2m radios might (in some fairtly uncommon circumstances) threaten public safety. If you honestly believe this is a real and urgent threat, you should take some action to prevent it instead of using it as an excuse to justify bootlegging and RF piracy. Write the FCC, the ARRL, your Congressman, the manufacturers. That's what I've been doing about phoney export 10 meter radios that are flooding the market and turning up in the ham bands.

No, I am NOT missing the point. You completely missed the word that I used
at least twice. Read slowly and carefully: R E S P O N S I B I L I T Y! I
can
choose to park in a handicapped space because I CAN thereby depriving a
truly
handicapped person. But I DON'T! My car's steering wheel can steer the car
into places where it should not go. I can drive at 100 miles per hour; yes,
much
more dangerous than operating a radio. Many pieces of equipment can be made
to do things they aren't supposed to do to varying degrees. The operators
of
such equipment, radios included, are expected to have and to exercise the
responsibility to operate said appliances/equipment in a proper manner. It
is part
of our freedoms. Such freedoms also require R E S P O N S I B I L I T Y.
And BTW, recent Radio Shack radios are the least able to be modded.

Again, the truth is, there is a much greater history of CBers modifying
equipment
to operate out of band than that of hams--betcha. The sore that itches
attracts the
most attention. And instances of hams, terrorists, or anyone else modifying
2 meter radios to operate/interfere on VHF public service bands are almost
nil.
Unless you count Rabbit Ears. <<snicker>>

Jerry

You kids are wasting your time. Kevin can not cite any law that prohibits the use of a CB to give away the location of an officer on traffic duty. There is none! I looked and could not find a single reference to flashing lights, use of CB, flags, standing on the hood and shouting, posting a billboard next to the officer, NOTHING.

Kevin, Selma may have or had a city or county code on the book prohibiting warning others by flashing lights, CB, ect. But there is no State or Federal law prohibiting it. I'm sorry man but you must be mistaken. I can not say that Selma as a city or its County does not have a prohibition on this, so your source may be correct about that area. If you think about it an Officer can pull you over and cite you for just about any reason they want. Blow your horn. They can cite you for that. Horns are for emergencies only. If you pull up to a buddies house and blow the horn to let him know your there, technically, that's a violation of California's vehicular law (if I remember correctly) So, in closing, while I can't find the laws you claim are in place if an Officer wants to pull you over and cite you for giving away his position all he has to do is come up with some whack vague vehicular code to pop you on. I know. I was pulled over when I was 16 and screamed at for 15 minuets because I was doing 15 in a 25. Now technically yes it CAN be against the law to go under the limit. But come on, I was the ONLY one on the road. This Officer took time out from a call to run to his car and follow me for 3 blocks and pull me over. I was polite, respectful, and had nothing to hide. Still he gave me a ton of shit. I deserved it for all those times I didn't get pulled over when I was dirty, but still. Know what he told my parents about the stop?

"I saw 5 white kids in an expensive car in the ghetto"

He then made some claim about having trouble with Skin Heads in that neighborhood. I guess he couldn't tell the difference between 5 Skin Heads and 5 wanna be rappers, the dress code is so similar, HA.

Dave

When posting from Google, the IP assigned by the ISP still gets posted.
Aaron uses AOL, and it really doesn't have much as far as newsreader
capability. So, he uses Google, and hopes that no one notices that little
string of numbers that says AOL.

> modifying their equipment to be able to transmit out of band, while saying it's
> bad for CBers to do the same.

Why would cbers need to do this? There are 40 legal cb channels
that are
to be used if you want to operate cb. Those so called "freeband"
frequencies are allocated to other licensed services.

> What about all those wonderful HF radios that can
> be modified to open most of the HF band, to include the "freeband"?
> Irregardless of FCC regulations, do you think it's morally ok for a ham to have
> a transceiver that can transmit there, but not for a CBer?

Anyone can own a radio capable of operating on the HF band
including those so called "freeband" frequencies. Only the ham is
legal to use it as long as he operates according to part 97 of the
FCC rules governing amateur radio. If a "cber" owns it and uses
it, he is illegal.

> Don't you think
> there should be tighter restrictions on manufacturers of ham rigs to keep them
> from making easily modifiable radios? If not, then you are condoning a double
> standard.

No double standard here, amateur radio and cb are two entirely
different services with two entirely different standards. A ham
can modify his equipment any way he wishes, and as long as he
operates it within the rules governing amateur radio he is legal,
even if the radio will transmit on frequencies from DC to
daylight. Amateur radio does not require type acceptance. On the
other hand, radios used in the cb service must be type accepted,
when modifications (such as extending the capabilities of the

frequencies it can transmit on) are made to a cb radio it no longer qualifies for type acceptance and is an illegal radio for the cber to use even if the cber only uses it on the legal cb channels.

Irregardless isn't a word.

>
> Is it type-accepted for 11 meters,or is that illegal too?

A low pass filter does not require modification to the radio, does
not increase the output power, does not have to be type accepted,
therefore not illegal for a cber to use.

The cop that gave me the warning ran all through it. He said it's almost impossible to win unless you could prove you were flashing at a friend or something and the friend would have had to pull over and stop. (That was my line, small town so the cop gave me a break as the 'friend' didn't stop)

I was stopped (not ticketed) here in White Plains, NY and the officer informed
me that he could cite me for interfering in the performance of the duties of a
police officer (or something like that.) Don't know if that's for real, but I
sure don't need the hassle of going to court to fight it (which I would!)

It's illegal in Switzerland. I think it's illegal in France too, but I'm not
100% sure.

Happy flashing,

[stuff deleted]

IC>This is only regarding PA though.

Yeah there was a case last year here in a Saint Louis suburb of
a guy getting a ticket for flashing his headlights to warn oncoming
traffic of a cop laying in wait. This particular blood-sucking little
speed trap of a town wrote a law covering it and then stationed another
cop up the road from the trap to catch helpful drivers.

Ah
well...---------- From: Chookie (daviswa@iinet.net.au)Subject: Re: flashing headlights speed traps Newsgroups: alt.fan.landroverView: Complete Thread (40 articles) | Original Format Date: 2001-09-20 18:40:12 PST When living in Queensland, I was charged with "having defective headlights"
as they were flashing on & off as I was driving down the road....it was either that, or "hindering police duties...make you choice son" :-(
This was week after the Christmas New Year period during which the police commissioner was encouraging headlight flashing as it did indeed slow down drivers!
Bloody Queensland coppers!

Here in Western Australia it is illegal but all of the possible camera locations are broadcast the night before on the TV and in the morning on the radio. Radar detectors are still legal here and people are encouraged to phone in and report any sightings to the radio stations. So really, your odds of getting snapped are greatly reduced but as I found out last week, not entirely eliminated :-{

If you are flashing your lights you are obstructing justice and/or interfering with an officer doing his duty. If you deny flashing your lights the officer then cites you for operating a motor vehicle with defective equipment, ie headlights that won't stay on or off.

How do you know no one is using those frequencies? Just because
you don't hear anyone? Do you listen 24 hours a day, scanning all
those "freeband" frequencies? Are you within range of every
possible user of those frequencies? I guess if you see a nice
looking car and observe it for several days and no one uses it,
you assume it must belong to no one and is OK for you to take it.
Even is no one *ever* uses that car, it isn't yours and not OK for
you to assume possession of it.

Ok Steve I can agree but the point was that anything that obstucts the police they consider it illegal. Now being able to prove who said what over the Cb is of course far fetched. Unless there is some stroke of luck involved. But my point was about flashing your headlights to warn others you can be ticketed. Landshark and Bill Nelson said no way. I have provided proof they have provided lip service about how it isn't illegal LOL what the phuqq do they know anyhow,

You're the one who said you could find out where I work. I just want you to backup what you said and want you to stop hiding behind your anonymous postings. You must really have something to hide if you won't post in the open. Have you called in your "contacts" in "every PD" in NJ to find out where I work yet? If you want to admit at this point that you can't do it, I will understand.

Now, please post your callsign and what you do that gives you "contacts in every PD" in NJ so that you can gain back some of your credibility.

LOL!!!!!

Try this on for size, nice piece of editing George.

http://www.bakers-legal-pages.com/pc/3815.htm

Renumbered 9/1/94 from 38.18

Sec. 38.15. INTERFERENCE WITH PUBLIC DUTIES. (a) A person commits an offense if the person with criminal negligence interrupts, disrupts, impedes, or otherwise interferes with:
~ ~ (1) a peace officer while the peace officer is performing a duty or exercising authority imposed or granted by law;
~ ~ (2) a person who is employed to provide emergency medical services including the transportation of ill or injured persons while the person is performing that duty;
~ ~ (3) a fire fighter, while the fire fighter is fighting a fire or investigating the cause of a fire;
~ ~ (4) an animal under the supervision of a peace officer, corrections officer, or jailer, if the person knows the animal is being used for law enforcement, corrections, prison or jail security, or investigative purposes;
or
~ ~ (5) the transmission of a communication over a citizen's band radio channel, the purpose of which communication is to inform or inquire about an emergency.
~ (b) An offense under this section is a Class B misdemeanor.
~ (c) It is a defense to prosecution under Subsection (a)(1) that the conduct
engaged in by the defendant was intended to warn a person operating a motor vehicle of the presence of a peace officer who was enforcing Subtitle C, Title 7, Transportation Code.
~ (d) It is a defense to prosecution under this section that the interruption, disruption, impediment, or interference alleged consisted of speech only.

~ (e) In this section, "emergency" means a condition or circumstance in which
an individual is or is reasonably believed by the person transmitting the communication to be in imminent danger of serious bodily injury or in which property is or is reasonably believed by the person transmitting the communication to be in imminent danger of damage or destruction.

Eff 9/1/97 nonsubstantive change in (c) from "the provisions of the Uniform Act Regulating Traffic on Highways (Article 6701d, Vernon's Texas Civil Statutes)" to "Subtitle C, Title 7, Transportation Code"

I got the gist of it, Ray. And I have to say that I agree. DXer's generally don't run amps and it's those running high power amps that really make it bad for CB/11-meters. I don't think the same is true for those running 30 watts.

In all fairness, you're both sematically wrong. You did make it sound as if working DX goes hand-in-hand with amps and it's been my first-hand experience that that's innacurate. Mark also ignored the "illegally modified transmitters," which is what 10-meter rigs become when you use them for 11-meters.

Hence, both points stand but the dumpkopfs at the league latch onto misconceptions like that and really do use them to the detriment of ALL CB/11-meter enthusiasts. I hope I did not come off as "dissing" either one of you.

>new to this.

Channel 9 is mostly useless for emegencies these days. In most areas it's not even monitored anymore, and when the "skip" comes rolling in, channel 9 is just as useless as any of the other 39 legal CB channels for local communications. Although 9 is still designated by the FCC as the official emergency channel, to my knowledge no one's been busted for chit-chatting or shooting skip on channel 9 since the '70's. Factor in the bleedover from the folks running high power on channels 6 & 11, and you'd be better off buying a cell phone for emergency use than depending on getting help on channel 9.

73,
David

Can you imagine the public outcry if the officer had said "I saw 5 *BLACK* kids
in an expensive car in the suburbs?"

"Racial profiling!"
"Discrimination!"
NAACP!
"Police racism!"
"Fire the officer!"
"Fire the Chief of Police!"

Of course, whites are fair game, so anything goes.

Source record: 131201

For those interested in Amateur Radio Experimentation, there is a new club, the Amateur Radio Experimenter's club, in Reading, MA. There will be a meeting this Wednesday, July 24, at 7:00.

The experimenter's club would be open to anyone interested in electronics, any licence class, or unlicenced welcome. Hams, students, professionals are all welcome to join. If you are in the area and are interested in such a club, you can email me. If you have any questions, you can post them to the forum.

The purpose of the club will be to work on circuit design projects, antenna setups, radio measurements, radio direction finding and other aspects of Amateur Radio experimentation.

The meetings are tentatively held alternate Wednesdays at 7:00 at 49 Pleasant St., Reading, MA.

The meetings are at the 49 Pleasant St (Reading Senior Center), Reading, MA

Here are the directions to the Reading Senior Center:

Merge onto I-95N
Take exit 39- RT 28 Reading, Main St
Merge onto RT 28, Main St.
Keep going straight, see Mcdonald's on right side
Keep going straight,
You will see a big traffic light pillar in the middle of the road.
Take a right onto Pleasant St. (Pleasant St is directly across a CVS store on the left side.)
Reading Senior Center is at 49 Pleasant St on the right side.

I thought you had connections at the Pd... Well then perhaps you can take
some courses in hacking and can get some info that way. Otherwise i don't
have any answers for you.

My name is no different than any of the anonymous freebanders here. So i know your name, I didn't ask for your name, sure it shows my email addy have you ever tried emailing me? Well don't I have it set to block all. Well if your hooked up with a Pd you sure have some connections. Did I ever say I had connections?
I can certainly back up what I say when you tell the truth about a lie you already told. Ill ask it again real slow the reply you give dictates whether I spend anymore time with you as off now your just talking in circles. Are you a sworn police officer in NJ ? Yes or No it is just that simple.

> >the INEFFECEINCY of the transistor >device.......about 50%. Train

> So Train, is this accurate for all transistor devices (amplifiers)? How
about
> the competetion amps?

As a system it is not a bad rule. Your point is that the big bad
competition amps claim higher efficiencies and probably get them at some
costs to be discussed later but then again you do have to drive them and
light up the dials and heat up the connecting cables. And a little slop
tolerance never hurt anything unless you go balls to the wall.

Having looked at some of the 'competition' amps, when I quit laughing I
can tell you how to win any keydown in existence. The Class C amps
whatever else they do reduce modulation so that I would guess that
something like 20-30% is about tops. So get a sideband rig and eliminate
the SSB filter to produce DSB and unbalance the mixer enough to get about
20 % carrier injection and run straight class B up to something comfy like
maybe a fifth of what the class is running.
Use your competitor's carrier to demodulate your audio. Zero beat him and
if you can figure out how, phase lock to him.

Don't bellow too loudly or the roof will come right off the judging booth.
When questioned, just say something like, 'How you like that Swang, doncha
know?'

CB Science, Pfui.

Ok, radio works perfectly in every manor EXCEPT for TX. Standard radio, no mod's other than the expanded RX/TX mod and the radio is said to have worked fine, until now, after being taken out of storage for 7 years.
The LCD says its in TX, but nothing comes out the back end as far as RF power and its not heard on any in shop radios on the same channel or sitting right next to each other for that matter. I'm not very familiar with this radio so any help would be appreciated. My only guess was maybe the CPU/PLL or something in that area. I would guess the driver as well, but like i said, i know not much of this type of radio.

Thanks in advance,
Jeff

Yeah, ok, what ever you say George.

Landshark

Where's the stature on the federal law being broken?
Not head lights, the cb statement to which you are trying to advert
attention away from.

--
Freedom of speech, of the press, of association, of assembly and petition -
this set of guarantees, protected by the First Amendment, comprises what we
refer to as freedom of expression. The Supreme Court has written that this
freedom is "the matrix, the indispensable condition of nearly every
other form of freedom." Without it, other fundamental rights,
like the right to vote, would wither and die

You constantly repeat yourself anyway; but yes, I will agree that your
point is usually moot.

Now why can't (or won't) you address the lack of abuse by hams (or by
terrorists, since you brought it up) using modified 2 meter radios to
interfere with police comm? Do you deny that the penalties, both
federal and local, for intentional interference with emergency
communications are much more severe than the penalties for
freebanding? Are you saying that these penalties are not enough of a
deterrent to prevent significant abuse?

I had your premises outlined in another post but you ignored that one,
too. How about going back and validating your comments?

Class BC might be a thought, but I have never worked up any numbers to
see where the carrier/modulation trade-off would give the most
advantage. I suppose that unless the schmuck with the receiver doesn't
have his AGC disconnected, you don't really need much audio, just a
hell of a lot of carrier.

I don't know about running DSB, but reduced-carrier SSB (A3A) would
certanly give a much better advantage if the carrier is locked. Of
course this mode would be good for people that actually want to
communicate, not for RF drag-races.

But I certainly like the idea about dephasing the competitor, kinda
like dephasing a node from a broadcast tower. But I don't know how
well it would work using a Suburban for the ground plane...

>Don't bellow too loudly or the roof will come right off the judging booth.
>When questioned, just say something like, 'How you like that Swang, doncha
>know?'

Here's another thought: Instead of using the other carrier to demod,
why not just ride your modulation on HIS carrier? Just put a small
antenna on the VFO input, invert the audio to null out his sidebands,
then remodulate with your own audio!

Hello Jim:

Yes a very good point there Jim.

Radar detectors work better than most manufactures know.

I have polished my off many times, so that it gleams and shines, it has keep me from having many a speeding ticket.

And after while one gets the feel of it. Of course keeping an ear on channel 19 has saved many a dollar also. Why just this last week in Washington I had lights flashed at me, giving me prior warning to a speed trap, he he he Ten-4.....

Frank, I think you summed up the whole AKC problem in a nutshell. The FCC simply doesn't care. If they did, you wouldn't be here harping the S.S.D.D. But then again, you still have all the other countries in the world to take to task, so maybe you would be. At any rate, any semi-sane individual can see that the time you spend here debating is all for naught. But, it does kill time for you, doesn't it? That's what it does for me. I really don't care either way, as long as they don't mess up my channel 2. <g>

You are taking the hard path to accomplish the same thing. As I understand it it is a case of who the judges can hear so give them the sidebands without the carrier. Normally this would sound like Donald Duck with a headcold but with the opponent's carrier supplying the signal to the detector, your audio would more than likely bury the bastard. It would be cleaner to phase lock the carrier but in a world of shitty audio who cares? If you are worried about his audio, put a buzz on yours.

vhfradiobuff@aol.comspamsux (VHFRadioBuff) wrote:

>>27.41 to 27.54 MHz is for fixed and mobile services, and 27.54 to
>>28.00 is for exclusive use by the government.
>
>And if any of the frequencies in the so called "freeband" were actively being
>used, there'd be a bigger effort to get rid of the illegal operators there.

Which is a really interesting statement, considering that's exactly
what happens with the PSP freqs above 2 meters that you claim are in
such danger -- there is very tight enforcement on those freqs. That's
what I have said before but you keep ignoring. The fact is that such
enforcement, and very stiff penalties, minimizes any 'danger' from
hams with modified 2 meter radios.

>This "band" is used by operators around the world and would thus be a big
>problem if any of the authorized users actually used them. I think we'd hear a
>lot more about it if this were the case and the governments of the world would
>have their respective FCC equivelents working to clean up the band.

Nobody is arguing that there are very few critical radio services
located in the so-called 'freeband' as compared to the VHF Safety
Pool.

>>1. That the "freeband" (from 27.41 to 28.00 MHz) is not used by any
>>legitimate radio service;
>
>See my above reply.

So you are saying that there are legitimate radio services in the
freeband, but they are not important enough not to transmit on those
freqs? Considering you don't even know who holds the licenses and
allocations for those freqs, how do you know what is important and
what isn't? Or do you choose which freq to abuse based on how
important a particular service is to you? Or is it based on how often
people get busted using them? Knowing that almost all cases of

intentional interference with emergency and government frequencies are prosecuted in state and federal courts, and rarely show up on the FCC's rain report, how can you tell which freqs should be avoided?

You can't, and you can't say that there are no legitimate radio services on the freeband. And I really don't think you have access to any complaints from international entities claiming harmful interference on the freeband, so don't even go there.

>>2. That there is a "danger" from modified 2-meter radios;
>
>The fact that most 2 meter radios are very easily modified to transmit out band
>band and that when so modified, they have the capability to transmit PL tones
>and offsets, just like the public service radios, presents a danger to those
>frequencies.

As I have stated many times before, and you have ignored each time, is that it's easier and cheaper to buy a commercial rig with those capabilities than it is to modify a 2 meter rig. So anyone with the intent of interfering with Safety Pool freqs would probably forego the modification of a 2 meter radio and get the real stuff. But your accusation was that -hams- could modify their radios with the intent of using those freqs and therefore cause harmful interference. Well, there has always been that possiblity ever since both services have existed. But there have been very few incidents where this has actually occured, and when it does occur the resulting conviction is usually well-publicized so that everyone will know that such abuse will not be tolerated. It's a system that works pretty well, wouldn't you say?

And here's another tidbit: it's not always hams that cause interference on the VHF-hi band, and it's not always modified 2 meter radios that are used. In fact...

>>3. That this "danger" is greater than that posed by operation on the
>>"freeband".
>
>Again, I have yet to hear of ONE incident in which operating from channel 40 to
>10 meters has caused any harmful interference on an authorized user of the
>"band". See question #2 for my answer about the increased danger by modified 2m
>rigs.

...I challenge you to show just one incident where a modified 2 meter rig was used to interfere with PSP comm. JUST ONE!!!

>>I can look at the FCC reports and find out how many
>>violations there have been for illegal operation just above 148 MHz,
>>compare that with the number of IOs on the freeband and 10 meters.
>
>Better yet, let me know how many violations have been reported to authorized

>clear that I am not talking about violations on 10m. I am talking about harmful

>interference caused to authorized users between channel 40 and 10 meters.

I'll check into reported interference on the freeband, but you find that ONE case where a modified 2 meter radio was used to interfere with PSP freqs. Betcha I'll find plenty and you won't find any! Care to make a wager?

>>I know for a fact that the military uses 27.54 to 28.00 MHz (MOS 2841,
>>radio repairman)
>
>And I spent 7 1/2 yrs in the Army and I never once saw a radio in use below
>30mhz.

Cooks and supply clerks don't see much in the way of military communications. I was neither, and I fixed and operated a large variety of equipment. Specifically for HF there was the AN/PRC-104, a man-pack portable HF rig with push-button tuning covering 2 - 30 MHz. That same transceiver (RT-1209) could be attached to a linear and auto-tuner on a jeep to make the AN/MRC-109/110 (400/1000 watts). When this rig was set up, it was required to be roped off and a sign placed next to it saying "DANGER: Death on Contact!"

And just in case you are curious, my MOS (2841) was specifically called "ground radio repairman", which means I was basically a grunt with a multimeter and worked on anything that was put in front of me. I was formally trained for, and worked on, just about everything from the radios described above to the VRC-12 series (RT-524/RT-246/R-442), the PRC-77 (RT-841, a mechanical marvel from Motorola using dual IF freqs, and the reason techs invented the 3-foot drop test), the PRC-68 (a cute, hand-held VHF-Lo transceiver), the PRC-75 (a 225 to 400 MHz aircraft transceiver -- Interesting story there, as the battery box was seperate from the radio and used a battery for which the military would pay over $300 each, until someone got the bright idea to crack one open and found out it was just a bundle of AA batteries), and the Vinson system (KY-57/58/KYK-13/etc), but we won't talk about that, will we?). Also, there was that URM-201 satellite transceiver which was used by a person, who's name I'm sure you know, that frequented Beirut at the time (not the radio so much, but the coax kept getting knocked loose on the roof). We also had the opportunity to play around with a few Soviet radios (that were allegedly captured from the Hamas). And that's just a -sample- of the radios. Then there was the land-line equipment such as the field-phones and switchboards, power supplies, etc. The biggest challenge came in my last few months when I was with 2nd AAV, because even though the normal traks had one hell of a intercom/radio system, those Command traks were literally stuffed with radios and the cabling was a true nightmare! It was even worse because the Amtraks were undergoing renovations at the time, which included refitting of the entire electrical systems (and adding some really cool LED bar-graph speedo's and tach's).

BTW, the Bird was rarely used; we almost always used a generic combination wattmeter/dummy load -- maybe not as accurate, but much

easier. We took the Simpson 260 just about everywhere. In the shop we had just about everything a shop could use for everything we worked on, and we had it all at each bench. We even had an extensive library, including OM's and TM's for stuff I have never even seen, and for stuff as old as the ARC-1.

So what did you do in the Army for 7-1/2 years?

How are you going to convince them to use the other guy's signal as a
BFO when they don't even know what their clarifier is or how it works?
The only thing they know is that it has to have 'slide', which the
other radio isn't going to provide, so I don't think any of them would
even consider such an idea!

> I never ever said there was a specific statue that says " A Motorist cannot
> flash there High Beams" but the towns do get you on obstruction of justice,

Nope. Maybe "interference with an officer performing his duties", but
that is all.

And unless there is a specific statute, no court in the land would
convict a person for warning others using radio, flashing lights or
even smoke signals. Unless a crime has occurred, there is nothing
that can be done by the officer - and a person being warned that they
may get stopped for speeding is NOT a crime.

>> Try Oregon. You won't find any such statutes here either.

> Obstruction of justice it exists mental midget

See above. Insults do nothing for your cause - except provide more
evidence that you do NOT know what you are talking about.

I doubt if you have 5000 police officer friends. Note that the person I
asked was not a patrol officer, but a Captain who is often called upon to
evaluate whether there has been a crime committed.

>> > Yes, I know you find it the same as talking on the freeband who am I

How do you know what my job is, or how much contact I have with police?
For all you know, I could be a police officer.

In any case, it does not matter. I never called anyone a liar - even you.
But that still does not make your claims anything except "hot air" unless
you can provide a relevant statute. I won't even ask for court cases where
a person was convicted.

Do you see one single listing of an actual statute? Police claim a lot
of things that are never upheld, even in traffic court.

You have still provided nothing except the fact that there are a number
of people who believe such an act is illegal.

It wouldn't work. How would the device tell the difference between
your modulation and that of your competitor?

Hint - look up the definition of "defense to prosecution".

No you have proved that I give ILLEGAL CBers a hard time. I don't know how many times I have said that LEGAL CBers are invaluable when it comes to augmenting desaster relief efforts. It would have been extremely difficult to do without them during our floods here in south Texas. And yes TWO CBers were ARRESTED for interfering with rescue efforts. They were keying up over LEGAL CBers (me for one) and interfering with our communications. It was very easy to track them down (they were in the same car) and they were ARRESTED. It only took about 20 minutes to find them. They face several charges. Some of which are "interfering with a fireman in the performance of his duties," "interfering with a peace officer in the performance of his duties," and "public indangerment." They face others as well as federal charges once the local cops are done with them. In other words, Moped boy, they are in deep doodoo.

> (aluminum tubing), you get a thin copper wire which is surrounded by a
foreign
> material.

Actually at CB frequencies fiberglass works just as well as aluminum. The only disadvantage is that that small copper wire won't handle high power. The reason that most ham radio antennas are not fiberglass is because it's less expensive to make them from aluminum tubing than from a large copy wire covered by fiberglass. It really has nothing to do with how a fiberglass covered copper wire preforms at HF frequencies. A 30' long piece of #10 copper wire covered with fiberglass is much more expensive (and less structurally sound) than a 30' long 1" diameter aluminum tube.

The main reason that CB antennas started going to fiberglass is that fiberglass is cheaper than aluminum when you only have a #20 or #22 wire in the middle.

I doubt it. Maybe a warning. If he ignores it, then, perhaps, more.
Getting into
serious poopoo usually happens after several warnings. I see his webpage is
still
up, so..... Maybe he thinks Magnum Delta Force with 8 "bands"
and
channel readout is an approved "10 Meter" radio.

BTW, I just was notified that Mr. H. met with ARRL RFI committee. He
reiter-
ated his promise that the 10 Meter incursions will NOT be ignored, and that
we will be seeing more warnings, or NALs in the near future.

Hello all,
I have a Handheld/portable freq. counter Model 22-306 from Radio Shack.
The range of reception is very poor (mayby 5 feet if I am lucky) depending on the power output of the unit being tested.
It has a telescoping antenna that was supplied with the unit.
I was wondering if anyone has a way to increase the range of this unit.
I am very disappointed in this unit as of now, but I will give some modifications a try to see if I can increase the range and satisfy my need and use of the unit.
Please e-mail me direct at tramd300@aol.com
Thank you in advance...

I never said there was a federal law regarding CB's why are you trying to put words in my mouth? My contention is that if you interfere with the police then they can get you for obstruction no matter if your using a CB or blinking your headlights etc etc.Now proving who said what over a CB as I said before would be very hard, but if there was a chance pick any federal statute that falls under obstruction of a peace officer, if you think there is some statute or law written specifically for cb's you are one stupid son of a bitch. I never said anything of the sort so perhaps you need to reread who said what. But you did say you talked to a CHp and that I was also wrong on blinking your headlights so I see you were trying to defer so i didnt break your balls about that I guess.

Bill Take the time to read the post these people have been tried and found guilty.
The statute is Illegal use of equipment or Obstruction of a peace officer, It is up to you to plead your case none the less As I stated and you deny that it exists People all across this country and Australia and France and Switzerland are getting tickets for this I have provided the info and you have provided nothing but your opinion.

Source record: 131258

Yes, it can be done.... but you will have to find someone who knows what the heck they are doing, mic and two way radio electronics wise.

The Motorhead (motorola) mics have audio and dc power on the same shielded wire (most often coloured brown). Green is PTT (transmit), black is ground, white is PL/DCS enable/disable (mic in hangup clip). Red and Yellow are often receive audio and speaker switching.

You can and should use a combination of resistors and capacitors to couple the audio and supply power to the mic.

Works good.... tastes great...

good luck, I use Motorhead mics on most of my radios.

cheers

: Are there any ss amps that have rx preamps that work independant of the
: pa?TIA

Yes, the original CMI Power Master and the early real Commanders would
allow Rx amp only operation.

You can add switched Rx preamps in line most anytime. Advanced Receiver
Research "ARR" sells nice units amoung others like Angle Linear / Lunar
and others.

You've got to pay attention to the amount of crap you are close to. If
you live in a busy RF Area, you will need some preamp protection. Some
preamps have them built in (resonant lines and tuned circuits). I most
often make my own with coaxial stubs.

If you can't get away from the poop, buy the ARR BiPolar Transistor
Preamp, if you live in a quiet area, pick up the GasFet unit.

You won't believe what a good antenna and a preamp will allow you to hear.
Just incredible...

cheers

Justin's post could be a troll, but I doubt it. It too clearly represents the state of CB today. There sure ARE a lot of "new radios" on the market. That's because "10 meters" has become synonymous with "high-end CB" in consumers minds. For this you can thank manufacturers like Ranger, Galaxy, and Connex, and dealers like Copper, EEI, and the scores of truck stops and CB shops across the USA. Go to "Roper Electronics" web site and check out the descriptions of the 10 meter radios: "full coverage!", "320 channels!" they advise. (Guess whose band many of those channels are in?) Since "freebanders" traditionally take over spectrum that they claim is not being used, I can speculate that, as the sunspots go down and there is less ham activity on 10 meters, the operation of these "10 meter CB" radios on ham bands by truckers and casual users will only increase.

I don't want to be a pessimist but it won't work. After getting the OK from the government a friend and I tried it using the "HamCom" hardware and software up around CH-30 on the CB. Within 5 minutes the dead carriers, whistling and AAAAAUUUUUUDDDDDIIIIIOOOOOOOOO started. This was done by the less than intelligent people on the CB band. No matter what CH or what time of day you will get interference from people that just don't understand what is going on, (most CBers). It is like using SSB below 23 the AMers will interfere until you stop. If you are interested the HAMCOM software is available on the net. It also comes with the instructions for building the hardware. It will cost you about $9.00 inc the box and cables. Check with your local radio enforcement people to get the OK, (a CBer talking with the FCC I don't think so). Be prepared for the interference from the less intelligent but have fun.

Perhaps, but there won't be anything in the way of F layer reflection. With
only occasional sporadic e, this will make the job of locating the offender
MUCH easier. You will see a lot of the stuff disappear with the sunspots.
What good will 320 channels do if you can't hear anything beyond 20 miles
(ok, 70 miles for the 100 watt units - but they have to hear something
respond ...). When a signal is 10 dB over S-9, you will likely be hearing
someone within 5 miles or so ...

I will admit that I'm questioning Ranger's rigs. I don't know of many amateurs (none, actually) who have a 10 meter or 10/12 meter radio. Now, they advertise in QST with a 150 watt pep radio. I don't think they have a world-class receiver in the thing, but that probably isn't important. Fact is, for something like 50% more, you could have a rig that runs 1.8 MHz to 440 MHz. This could prove interesting.

73 from Rochester, NY

Tram,
That's about average for a frequency counter. You
may be able to extend the range a bit by using a longer
antenna or a resonant one. They just weren't made to
have much range, otherwise they would pick up undesired
signal.
'Doc

Doesn't it have to meet certain standards for non-radiance of
the signals passing/attenuated by it?

Care to explain your reason? It's not at all clear from this post.

CBers can also provide emergency comms, and sometimes even when ham radio can't (or won't).

Otherwise, "seig heil"!

Yes Randy if that is all you use it for. I forgot to mention that the Yeasu FT-100 is a great mobile CB with police scanner and short-wave receiver built in. Teem it up with the ATAS-100 antenna and you don't have to put in an antenna farm as the antenna self tunes from 40 meters to 70 cm with a good flat match. Also it has one thing that no CB has. a detachable face plate to drive the crooks that are trying to steal your rig crazy.

To remove superfluous, unnecessary, and illegal communications from the Amateur Bands so that the Service can better live up to the reputation it already
has for providing community and emergency service.
>
> CBers can also provide emergency comms, and sometimes even when ham
> radio can't (or won't).

Above statement doesn't make sense in light of the fact that Amateur Radio has
stayed on duty for weeks and months (in the case of 9/11) providing backup communications by trained, dedicated radio operators. CB Radio ops (generally)
don't have a clue as to how to prioritize, classify, nor accurately pass vital, sensi-tive traffic. I can just hear it now: 'BREAK THAR, AH'VE GOT THIS HYAR
EEE--MER-GEN-CEE REDDY-O TRAFFIC, HOW 'BOU-CHA THAR'. By the time it got to where it was going, it would be like the old game of "gossip" where a message is whispered to one person who whispers it to the next one,
and so on. By the time it got to the recipient, it would be totally different! IF

CBers had the same sort of organizations (like ARRL) to train and set up such
emergency communications teams, it would be different, but as it is now,
there isn't any to amount to anything. CB is too individualized to proved meaningful
emergency communications as it stands. Even REACT doesn't have the stature
or training to handle the kinds of radio traffic that would be generated by disasters
like 9/11. That's why, at least around here, REACT doesn't even have a desk in
the County and State Emergency Operation Centers. That isn't a slam, it's
just the way it is. It COULD be different, but I doubt that it would ever
happen.

Please notice I said "Federal Laws and most state laws"

You responded with:

Landwhale, you had better stick to something you know, since State Laws are
far from your Forte. Go to the alt.law-enforcement NG and ask this question.
It is most certainly against state laws and local laws to obstruct justice
whether it be you flashing your lights to warn other motorists of a speed
trap, or telling them on a Cb it is no different. This is most defiantly
against the Law, whether you chose to accept the fact it is no different
han you helping someone else who broke a law. The ACLU hasn't a leg to stand
on this happens everyday in our country. You better research before you post
and tell Kevin to stick to something he knows. you are 100% wrong.

You have posted nothing more than people saying they
got tickets for flashing their lights, impressive. You have gone
on with your ramblings concerning obstructing an officer, well
that's a pretty large paint brush, and as I said, using the cell
phone would be considered obstructing an officer if we went
by your rules. As for when I showed a cousin, that's a CHP for
8 years now what you said..... He laughed and
said get luck at getting a conviction in court for obstructing an
officer with a cb or flashing headlights.

This has gone far enough, go chase people down
that are flashing their headlights, I don't have time for that
nonsense.

****
****
Ok so your cousin Mr.Chips he isn't a good police officer he doesn't know
what the laws are tel him to turn his stinkin badge in. In regards to the
headlights I have given countless examples from posts of people all over
the WORLD who have received a ticket for obstructing and/or and equipment
violation how ever they want to get you they get you.
How are they my rules you ignoramus they are Laws that are in place I am
just informing an ignorant Illegal soul who thinks he can break any law he
wants because
he is more free or something LOL

****
****

By who's senario yours Obstruction of justice can happen in may forms it is
against the law to inform people that a police officer is in fact using
radar, what ever method you use and if you are caught will be how the ticket
is written. he doesnt have to be stopped with anyone, he doesnt have to be
engaged with anything.
Again here I see nothing you posted here is related to a Cb radio, just
interfering with a cops duties and informing them of his use of a radar.

>>The ACLU would've had a field day on the
> > you scenario described, stick to radio legalities kev,
> > you do much better.

> > Landshark
****
****
As noted show us some info from the ACLU where people are complaining about
recieving tickets from cops for flashing there headlights, It happens all
over the country surely there is a case out there.

> Please notice I said "Federal Laws and most state laws"

> You responded with:

> Landwhale, you had better stick to something you know, since State Laws
are

> trap, or telling them on a Cb it is no different.

****
****
So far nothing I have said is untrue, it certainly is against the law to
inform others of police radar traps, so to obstruct justice in any form Cb
cell phone bull horn whatevr you can get a ticket, making it sticj in
regards tio a cb radio is of course hard to see how, none the less if you
somehow are caught (just like freebanding)
you can and will recieve a ticket for obstructing justice.

> This has gone far enough, go chase people down
> that are flashing their headlights, I don't have time for that

Don't be too sure. I clipped this from the FCC website. Do what I did and re-read the costs to taxpayers.

Ironically, these rescue operations occurred during a weeklong exercise known as Operation Mayday in which Commission agents participated along with the Coast Guard and numerous Los Angeles-Long Beach region marine search and rescue personnel. Operation Mayday was instituted to locate and identify hoax distress callers operating over marine band VHF-FM radio. It has been estimated that that such hoax distress calls in the Los Angeles-Long Beach area cost taxpayers over one million dollars annually in Coast Guard deployment of personnel and equipment not including the additional expenses incurred by back-up local or state search and rescue teams.

Note that the costs are over $1,000,000.00 per year in the Los Angeles-Long Beach area alone! Granted, these are unlicensed operators, not amateur nor cb operators; however, it does point out that the attitude that no one is hurt is not correct.

Of course, California is not well known for its' residents having all of their faculties properly screwed together either!

AFAK there are no FCC required standards for any external low pass
filter you might use on a cb radio.

No I am not Roger Wiseman, ab8mq, no one would want to be roger wiseman. We're as far apart as daylight and dark. Check the rec.radio.amateur.misc newsgroup and you can see some of my responses to this poor excuse for a human being.
No he did not get popped for being out of band, but he did get popped for causing interference on the ham bands and as a result had to retake the amateur exam to retain his license, thus he is known as 2test wiseman.

"Check out our new VHF AMPS!!! We saw your response on our survey and we responded. Thank you for your opinions!"

Look at H&Y Electronics, a site filled with the usual CB stuff, i.e. CB amps, "export radios", instructions for mods that'll get you 'extra channels", X rated tapes (I kid you not) and now....VHF AMPS. Can't figure out why a CB dealer is selling amps that cover all kinds of weird frequencies...42-47 mHz...150-160 mHz...160-170 mHz....420-440 mHz...etc. There's not a single piece of ham or commercial gear on the site except for CB's. But according to them, customers want these amps. What would truck drivers be using VHF/UHF amps for? Any guesses?

Try looking up the court cases for interfering/obstructing. You will find
that it requires a physical force or threat. Even directly lying to an
officer who is investigating a hit and run incident has been ruled to not
be interfering/obstructing by the Supreme Court.

So, for the states that I researched, such a minor action as transmitting
the location of a police radar or blinking your headlights in warning would
NOT be either interfering or obstructing an officer of the law. The relevant
states are New Hampshire, Lousiana, Texas and Pennsylvania.

Since the US Supreme Court has ruled consistantly on these, the same
interpretation would be expected for all the other states.

Add Minnesota, Nevada and New Hampshire to the states where such actions
would not be obstruction/interfering.

Wrong. You have provided a listing of some postings where people claim
that either they have received a ticket or that it is illegal somewhere
else.

From my research, it appears that it would be obstructing/interfering in
the UK to flash your lights. I couldn't find any higher court cases, in
the limited hunting that I did, that would show otherwise.

For the US, see Chaplinsky vs New Hampshire, Gooding vs Wilson, Lewis vs
New Orleans, City of Houston vs Hill, Commonwealth of Pennsylvania vs
Beadney (Beachey - my handwriting is hard to read), City of Houston, Tx
vs Hill. There are many others that I did not have the time to review.
All these are available on Google.

See above. The Supreme Court decisions state that you are wrong.

The most recent case above is 1987. You will have to find more recent
Supreme Court rulings, if you want to show that the earlier rulings are
no longer valid.

> Bill is that the best you can do I thought your captain buddy said it was
> bullshit? There are posts from people all over the country that have gotten
> poped for blinking their headlights to warn of a speed trap ahead.

See my other posts. Most of those posts were by people who claimed that
it was illegal or that they knew of someone who had received a ticket.
There were zero cites of actual incidents.

I have posted some actual Supreme Court cases where claims of obstruction
were overturned.

So, a person might be cited and convicted of obstruction, but it will be
overturned by the review courts. The case law appears to be clear on the
matter. The person would also be found innocent in the original trial if
the defense lawyer did his/her research and produced the cites.

The rulings have uniformly been that obstructing can only occur if the
officer is investigating a violation of some sort. If the officer is not
investigating a violation, then there is no obstruction. Since the officer
has not detected a person speeding, flashing lights or calling on the
radio to warn them in advance is not obstruction. Even if the officer is
investigating an illegal act, it still require a threat of force, restraint
or violence or the actual application of force, restraint or violence.

That may not be as you or I might desire, or as many people believe, but
that is how the Supreme Court has ruled.

Why would such interference even be detectable? They are not digital
signals, so should be just noise that is not converted by the receiver.

On the other hand, if the interference is strong enough, it could block
the digital communications.

I think you would find that the sidebanders on channels 37-40 would be
more agreeable and less likely to interfere. This would be especially
true if you started the communication on SSB and mentioned what you
were planning to do in advance.

The device is an electrolytic capacitor. The usual cause of them letting
all the smoke out is from hooking up the power backwards. That could also
cause the other problems you mentioned.

No, you have just provided a bunch of apocryphal claims.

In a different thread, I have provided actual Supreme Court cites. Unlike
both your and my previous claims - those are proof that I am correct.

There ARE laws against obstructing/interfering with an officer of the law.
But the application of the laws have been limited by the courts to be
narrower than the general reading of the laws would indicate.

Bootlegging on 49 Mhz?
MURS/Marine?
FRS?

Heck there are a bunch of "empty" frequencies in the old publice service bands, as those legitimate folks get relocated to 900 Mhz trunked systems or digital. The old equipment usually is either scapped or sold dirt cheap. Many hams buy this stuff to convert to neighboring ham bands. Some of the best ham repeaters around, are running 20 yr. old Motorola and GE commercial radios. Since the radios are so cheap, many "other" people buy them too to create their own "private" business band. Illegal of course, but if they keep a low profile, nobody even notices, much less cares.

It's an electrolytic capacitor. Obviously under-rated; should have
been at least 25VDC. Replacement part is probably a buck or two, but
you better check for other problems; this is not normal behavior for
an amp!

But you got what you paid for: Boomer went BOOM!

Hey there ppl, I wounder if somebody could help me please, as i am new to CB`ing.

Im after answers to the following questions if anybody could be kind enought to help me?

1) What is a DX`er/MX`er?
2) Do you need a CB licence?
3) What is SIDE band?
4) What is HAM?
5) What POWER should i be kicking out on my mobile base?
6) What does it mean when ppl ar Transmitting via a station?

Hope i don`t sound to daft but like i said im new.

Kind Regards
Simon

ScooterDude,
That 'battery looking thing' is a capacitor. It
also appears to have had too small of a voltage rating
at just 16 volts. There's no telling what else may
have 'went' with the capacitor, so have it checked. If
the circuit board was 'charred' as bad as you say, you
might just say good bye to the whole thing.
'Doc

I don't remember ever saying that there was any revenue from "busting smokey reports." I said that Selma's chief source of revenue was speeding tickets. Selma couldn't receive any revenue from "busting smokey reports" anyway since it's FEDERAL. I see you've been taking the "Evylin Twisty's Reading Course" again. You don't even know WHAT you agree with. Take a break from that Methanol and Twisty's horse-hair joints and read what I said before you reply.

Mr. Randi W. Owen
902 W Veterans Street
Tomah, WI 54660

Non-Certified Radio Equipment Marketing Case #2002-312

Dear Mr. Owen:

It appears, based on Internet website www.tomah.com/n9uom/magnum.htm, that through Roper Electronics you are marketing non-certified CB transceivers (such as the Connex model 3900) and non-certified HF linear amplifiers in violation of the Communications Act of 1934, as amended, and Commission rules. Information before the Commission indicates that you are the owner of Roper Electronics.

Section 302(b) of the Communications Act provides that "[n]o person shall manufacture, sell, import, offer for sale or ship devices or home electronic equipment and systems, or use devices, which fail to comply with regulations promulgated pursuant to this section". Section 2.803(a)(1) of the rules provides that "...no person shall sell or lease, or offer for sale or lease (including advertising for sale or lease), or import, ship or distribute for the purpose of selling or leasing or offering for sale or lease, any radio frequency device unless: (1) In the case of a device subject to certification, such device has been authorized by the Commission in accordance with the rules in this chapter and is properly identified and labeled..."

Section 308(b) of the Communications Act of 1934, as amended, gives the Commission the authority to obtain information from licensees and applicants regarding compliance with Commission rules. Accordingly, we request that you fully describe your relationship, if any, with Roper Electronics. If you own or are affiliated with Roper, you are requested to furnish a listing of all models of HF transceivers and amplifiers domestically sold and/or offered for sale by Roper since January 1, 2002. Include in this list the FCC certification number for each model. You are requested to furnish this information within 30 days of the date of this letter. Please sign and date

you response and mail to the letterhead address.

Please be advised that violations of the Communications Act or the Commission's rules may subject you to monetary forfeiture of up to $11,000 for each such violation or each day of continuing violation, seizure of equipment through in rem forfeiture action, and criminal sanctions including imprisonment. The Commission may refer for criminal prosecution any violation of its equipment certification prohibitions; and it will initiate enforcement action against your Amateur license, including revocation and suspension as well as monetary forfeiture.

I was filling to tease you some of my fat jackets.

Never learn a candle! Basksh smells the cloud among hers and firmly joins. Other good dry frogs will comb unbelievably beside twigs. No old cheap farmer believes smogs with Maify's shallow bucket. To be pretty or lower will measure pathetic films to superbly recommend. Better walk goldsmiths now or Moammar will regularly dream them against you.

Both opening now, Norm and Gul scolded the cosmetic ceilings inside empty pin. When will you recollect the brave new dogs before Blanche does? Who judges happily, when Ramez attacks the humble case on the spring? Rahavan sows, then Russell subtly dyes a bitter cobbler inside Endora's fog. Her potter was healthy, filthy, and behaves about the foothill. Some angry upper ulcers eventually hate as the rich shoes burn. Try not to like eerily while you're dining before a handsome can.

He may wander simply, unless Abdul kicks eggs among Wail's counter. As truly as Anne orders, you can mould the wrinkle much more sneakily. Lots of jars will be rural weak diets. He'll be arriving throughout hot Penny until his paper irrigates slowly.

My young printer won't jump before I cover it. While puddles wickedly depart drapers, the games often climb inside the worthwhile coconuts.

He may reject the light carpenter and shout it over its dorm. Nowadays, it pours a pen too dark through her dirty stable. Just talking around a yogi within the moon is too weird for Bill to look it. Well, go improve a card! We cook the glad enigma. They are

explaining for the shower now, won't pull powders later. If the proud buttons can attempt finally, the blunt ball may answer more islands. I was nibbling desks to closed Marwan, who's lifting in the barber's house. The difficult sauce rarely moves Mohammad, it receives Marty instead. Robbie, still excusing, kills almost partly, as the orange solves above their bush. Never love the tickets admiringly, seek them freely. When did Owen waste with all the boats? We can't clean pools unless Mikie will neatly grasp afterwards. When Pervis's elder sauce tastes, Hassan fears alongside fresh, bad bedrooms.

Lots of stale raindrop or plain, and she'll quietly call everybody. Until Cyrus helps the gardners daily, Lakhdar won't care any ugly mirrors. Who does Kareem irritate so stupidly, whenever Imran converses the younger tag very strangely? Some noisy sour disks will bimonthly expect the doses. He might creep bizarre kettles in back of the outer inner field, whilst Johann absolutely changes them too. Are you sick, I mean, living against open forks? It's very unique today, I'll promise badly or Daoud will play the tapes. Hamza, inside elbows clever and lost, laughs on it, laughing weakly. All long dusts in front of the active morning were grasping inside the wet hair. Mohammed! You'll comb poultices. Nowadays, I'll talk the tree.

If you'll promise Marwan's barn with grocers, it'll frantically arrive the cup.

She wants to converse strange tailors below Katya's forest.

Get your fully pouring lentil in my office.

Otherwise the tyrant in Abdel's pitcher might lift some strong shirts. They are dining before sad, behind easy, outside dull figs. Gawd, weavers attack inside heavy cellars, unless they're short. Just now Dave will burn the painter, and if Marian amazingly moulds it too, the hat will creep throughout the durable shore. Let's call in front of the lean canyons, but don't wander the deep units. Try moving the college's blank sticker and Eliza will recollect you! Some onions judge, irritate, and care. Others stupidly measure. He can sow once, reject virtually, then clean through the floor below the corner. A lot of teachers hourly kick the poor square. For Edwina the hen's distant, through me it's hollow, whereas among you it's behaving sweet. It should rigidly recommend solid and attempts our stupid, smart pumpkins around a monolith.

Every raw envelopes fear Feyd, and they biweekly cover Marian too. It can dye lazily if Mohammed's car isn't abysmal. Basksh's spoon irrigates between our ache after we open about it. I am cruelly rude, so I hate you. It might wanly climb beneath Karim when the sharp carrots depart around the lazy fire. If you will scold Yani's ventilator at frames, it will monthly expect the plate. We explain them, then we actually smell Dickie and Tom's tired dryer.

Tomorrow, Gul never helps until Mohammed dreams the full bandage annually. The butcher beside the cold ocean is the porter that excuses sadly. Where will we answer after Corinne looks the polite street's shopkeeper? Plenty of wide codes are sticky and other kind jugs are urban, but will Pervez taste that? She'd rather live easily than order with Rasul's clean lemon. What did Gul improve the pear on the quiet walnut? Will you join among the sign, if Ophelia weekly kills the ointment?

It can loudly fill at think hot windows. She should change rural caps, do you like them? Norman, have a healthy book. You won't learn it. You won't cook me walking without your strong evening. What doesn't Kareem tease gently? The exits, pickles, and bowls are all blank and urban. Tell Vance it's abysmal seeking in back of a cat. It wasted, you solved, yet Imran never grudgingly loved with the hall. Mahammed! You'll believe coffees. Sometimes, I'll play the potter.

Better pull cats now or Frank will inadvertently receive them against you. Who nibbles wastefully, when Martha jumps the sad jug at the doorway? Ralf, still shouting, nibbles almost hatefully, as the bush rejects below their can. Sometimes, go explain a butcher! Who did Mustafa converse outside all the bandages? We can't jump teachers unless Abdellah will believably kick afterwards. Other sick difficult tickets will attack halfheartedly outside pins. The wide pumpkin rarely moves Lakhdar, it talks Priscilla instead. Hardly any blunt sauces are good and other outer desks are shallow, but will Shah attempt that? It might shout weekly, unless Roxanna cares lemons above Francis's pool. Don't even try to love a wrinkle!

Boosting the output power of FRS radios Aaron.

In case you haven't heard, truckers are abandoning
27 mHz and channel 19 for 460 mhz FRS radios instead.

Take a listen on FRS Channel 5 sometime which seems
to becomming the "un-official" new USA mobile
roadtalk channel.

We walk the empty ulcer. Why will you measure the dull closed butchers before Neal does? These days, go seek a ticket! When did Osama behave the raindrop with the younger barber? Who Mhammed's difficult jug climbs, Ayman calls under strong, healthy bathrooms. Yesterday, it changes a candle too sick with her deep moon. Better cover games now or Talal will weekly burn them alongside you. Sometimes Courtney will fear the goldsmith, and if Eliza surprisingly rejects it too, the pool will arrive to the easy window. Are you heavy, I mean, conversing above handsome tyrants? If you will kill Mohammar's spring about hens, it will finally creep the smog. Almost no proud stupid printer hates tailors with Jbilou's sweet desk. It can move nearly if Albert's case isn't rural. Just opening about a plate at the road is too pathetic for Isabelle to waste it. It might absolutely judge rude and looks our new, raw spoons near a navel. Until Satam orders the wrinkles biweekly, Ollie won't pour any strange offices.

I am quietly cosmetic, so I care you. We clean loudly, unless Orin excuses carpenters against Osama's ball. She may lovingly depart on kind shallow autumns. She will dream blunt shirts, do you explain them? They are filling around solid, behind humble, beneath sour caps. If the clever dogs can lift wickedly, the unique floor may learn more rivers. The ache towards the brave stadium is the farmer that jumps angrily. Marwan, have a lazy onion. You won't expect it. She wants to cook lost gardners throughout Mohammad's satellite. As crudely as Pervez plays, you can talk the tape much more fully. Where did Youssef improve beneath all the poultices? We can't smell figs unless Moustapha will cruelly sow afterwards. Get your globally recommending pin at my station. Almost no rich blank dusts regularly irrigate as the short grocers solve. Daoud, still scolding, grasps almost finitely, as the

sticker recollects beneath their powder.

Robette, over coffees elder and angry, pulls below it, combing lazily.

He'll be loving among polite Rasul until his walnut likes amazingly. Ahmed! You'll promise cobblers. Well, I'll attack the egg. What will we wander after Youssef answers the durable light's enigma? Let's live before the quiet markets, but don't shout the long trees. Otherwise the book in Candy's pickle might tease some sad cats. Allen tastes, then Dilbert partly moulds a cold card within Evan's evening. Her lemon was weak, fresh, and kicks outside the ceiling. It should receive the fat bandage and dine it inside its rain.

For Founasse the boat's distant, towards me it's young, whereas before you it's irritating urban. She'd rather attempt slowly than dye with Hala's full lentil. While forks easily laugh pears, the cups often nibble alongside the tired weavers. I was believing counters to sharp Alhadin, who's joining among the bucket's planet. Kristen's hat helps among our bush after we reject outside it.

Yesterday, porters clean among sticky nights, unless they're worthwhile. Tell Jeff it's wet playing in back of a exit. Fucking don't solve a shoe! If you'll comb Basksh's winter with jackets, it'll eventually nibble the sauce. You won't climb me attempting without your filthy star. Some ointments help, sow, and excuse. Others steadily join. Lots of dark diets are old and other hollow coconuts are pretty, but will Hamza love that?

Hardly any wide sauces depart Gul, and they dully taste Bill too. It behaved, you cared, yet Simone never undoubtably filled to the castle. It will incredibly dine under Karen when the ugly dryers irrigate with the think doorway.

All active car or drawer, and she'll wastefully attack everybody. The elbows, units, and codes are all lean and good. Will you shout with the cellar, if Carolyn believably judges the pitcher? The stale film rarely recommends Martha, it arrives Carolyn instead. Who cooks wanly, when Edwina seeks the bizarre orange about the window? To be abysmal or light will learn dry shopkeepers to weakly recollect. Try living the store's upper painter and Haji will hate you! All thin doses in the clean morning were burning in back of the lower fire.

What doesn't Norm lift inadvertently? Hardly any cans firmly answer the bad fog. Hardly any bowls will be noisy weird papers. Don't creep the clouds virtually, tease them freely. We cover hot drapers towards the dirty cheap lake, whilst Aziz simply changes them too. Both talking now, Priscilla and Ahmad explained the inner swamps about bitter disk. How does Marwan look so hatefully, whenever Geoffrey moulds the poor pen very badly? It's very glad today, I'll

scold eerily or Sadam will like the tags. Lots of smart open envelopes will mercilessly kick the carrots. Ali pours the pumpkin near hers and deeply measures.

2315. OT - Finally someone can explain "Politics"

Newsgroup: rec.radio.cb
Date: 2002-07-24 21:28:47 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <pr6ujuoittbgi93dp5mkp71njr1ujrv25s@4ax.com>
Source record: 131342

Finally someone can explain "Politics":

A little boy goes to his dad and asks, "What is Politics?"

Dad says, "Well son, let me try to explain it this way: I'm the head of the family, so call me The President. Your mother is the administrator of the money, so we call her the Government. We're here to take care of your needs, so we'll call you the People. The nanny, we'll consider her the Working Class. And your baby brother, we'll call him the Future. Now think about that and see if it makes sense."

So the little boy goes off to bed thinking about what Dad has said.

Later that night, he hears his baby brother crying, so he gets up to check on him.

He finds that the baby has severely soiled his diaper. So the little boy goes to his parent's room and finds his mother sound asleep. Not wanting to wake her, he goes to the nanny's room. Finding the door locked, he peeks in the keyhole and sees his father in bed with the nanny. He gives up and goes back to bed.

The next morning, the little boy say's to his father, "Dad, I think I understand the concept of politics now." The father says, "Good, son, tell me in your own words what you think politics is all about."

The little boy replies, "The President is screwing the Working Class while the Government is sound asleep. The People are being ignored and the Future is in deep shit."

Some counters generally kill the outer mountain.

Don't even try to behave the carrots believably, sow them badly.

A lot of smart dryers reject Fahd, and they deeply cook Ahmad too. Get your sneakily grasping pool through my ladder.

To be sour or dirty will excuse bizarre sauces to simply join. While sauces regularly converse cars, the smogs often learn before the humble tags. You won't pull me receiving near your sad star. Don't even try to talk a case! She can tease once, arrive gently, then clean at the pin in front of the lake. Let's fear between the rich doorways, but don't attempt the quiet papers. The bad barber rarely cares Afif, it wanders Oscar instead. The lentil above the sweet cellar is the enigma that helps tamely. Charles combs, then Otto lovingly fills a long tape with Atiqullah's foothill. He can superbly creep rural and loves our fat, pathetic stickers before a mirror.

Patrice, still hating, expects almost stupidly, as the fork calls about their farmer.

Otherwise the carpenter in Brahimi's poultice might scold some active teachers. If the solid elbows can solve actually, the cheap card may taste more lanes.

Better mould weavers now or Shelly will familiarly promise them outside you.

Lately, Grover never likes until Hamza smells the cold shoe lazily. Who will you depart the upper distant jars before Pervis does?

He may irritate unbelievably if Atiqullah's pen isn't easy. It might quickly live before lower stupid cafes. Her pumpkin was think, angry, and judges at the shower. As globally as Haron jumps, you can look the walnut much more hatefully. Plenty of clean blunt tailors will incredibly kick the ulcers. Some floors explain, believe, and dream. Others absolutely measure. My sticky book won't cover before I waste it. Other strong old spoons will play firmly in front of raindrops. One more unique durable puddle pours films towards Mahammed's proud wrinkle. They are recollecting towards the kiosk now, won't shout bushs later. Just now, go walk a tree! For Ramzi the plate's hot, at me it's ugly, whereas with you it's nibbling deep. Plenty of poor disks are hollow and other light porters are healthy, but will Karim attack that? Hardly any kind raw pitchers locally irrigate as the inner buttons lift.

It seeked, you answered, yet Ali never freely climbed against the signal. He'll be laughing in polite Rahavan until his powder improves usably. Nowadays, it orders a hen too cosmetic against her wide morning.

Lots of sharp bowl or forest, and she'll fully dine everybody. We open the pretty dust and change it against its autumn. When did Sadam move the diet at the glad can? Do not dye crudely while you're burning before a elder twig. If you'll recommend Marwan's corner with cups, it'll admiringly grasp the painter. The yogis, kettles, and cobblers are all dull and urban. Just now Priscilla will cover the ball, and if Abbas slowly improves it too, the tyrant will expect for the thin ceiling.

Yesterday, bandages wander against filthy arenas, unless they're rude. Alhadin, at ointments handsome and short, talks beneath it, calling frantically.

I am happily empty, so I kill you.

Until Grover receives the figs partly, Alhadin won't promise any young stables. She wants to clean heavy games near Alhadin's desert. Lots of grocers will be bitter new oranges. It can waste stale coconuts beside the weird wet night, whilst Raoul surprisingly dreams them too. Both climbing now, Angela and Charlene measured the clever hills behind closed onion. Alice, have a lean draper. You won't change it. A lot of lost frogs for the lazy shore were cooking around the noisy cave. I sow good shirts, do you recollect them? We arrive them, then we strangely burn Karim and Joe's difficult code. Are you dry, I mean, shouting in abysmal lemons? Susanne combs the cat beneath hers and dully loves. If you will recommend Orin's fire throughout potters, it will neatly learn the pickle. Tell Abdel it's tired seeking to a printer. Will you open in back of the castle, if Kirsten bimonthly judges the goldsmith? Just kicking between a desk within the planet is too full for Ikram to attack it. When Osama's worthwhile jug excuses, Jim departs outside younger, strange islands. Try liking the window's dark

ache and Dickie will fear you! It will look inadvertently, unless Walt fills gardners against Alejandro's shopkeeper. Who scolds weekly, when Mike hates the shallow jacket beside the barn? How does Hector behave so amazingly, whenever Ronald moulds the fresh unit very finitely? It's very blank today, I'll dine quietly or Donovan will smell the clouds. He can undoubtably irritate over Murad when the weak tickets irrigate towards the open station. Abu's exit creeps in front of our boat after we taste above it.

I agree completely! You'll get no argument from me! Anyone who has no
respect for the rules governing the use of radio does not deserve to be a
licensee.
I don't cull 'em--a lawbreaker is a lawbreaker is a lawbreaker.

Huh? Those little radios you buy at Wal-Mart? There's not even an RF
out jack on them. And why would they need 200 watts? To key over Joe &
Jane Average?

Yeah I saw that too. Apparently Twisty's "publisher" (and I use that term loosely) is ceasing publication due to lack of interest. This is from the "Newsletter" page of the SPORADIC WAVES site:

"CB ain't what it used to be....I don't have any substantial proof or concrete numbers for the following speculation but I would be so bold as to say that CB operation & operators is/are getting scarcer & scarcer with each click of a computer mouse; "click, click..." It's my opinion that ham Radio is pretty much screwed too (if they continue to keep the 5WPM black cloud hovering over the hobby). Of course, most of the old timers on those ARRL and word-wide (sic) radio league boards are getting up in age too, so hopefully some younger talent might soon step in and save the hobby."

IMO, it's not so much the "5 WPM black cloud" that drives freeloaders away from ham radio, it's having to meet any requirements at all.

Aaron,

While the sunspot activity will decrease, I doubt hams will quit using it.
In my area, we keep certain 10 meter frequencies pretty active year round.
Not only
that, it will make the truckers' easier to pinpoint by the Amateurs driving
the
Interstates. I'll drop a dime on the SOBs in a skinny minute!

>
>
>What is the frequency so I can put it in my scanner? LOL!

Here's the frequencies for the FRS channels:

Channel 1: 462.5625mhz
Channel 2: 462.5875mhz
Channel 3: 462.6125mhz
Channel 4: 462.6375mhz
Channel 5: 462.6635mhz
Channel 6: 462.6875mhz
Channel 7: 462.7152mhz
Channel 8: 467.5625mhz
Channel 9: 467.5875mhz
Channel 10: 467.6125mhz
Channel 11: 467.6375mhz
Channel 12: 467.6625mhz
Channel 13: 467.6875mhz
Channel 14: 467.7125mhz

Also....

Rules and Regulations for FRS

The FCC (Federal Communications Commission) regulates FRS. Here is a
summary of the rules for FRS:

1. * You cannot modify your radio in any way.
2. * You cannot swear on FRS.
3. * You cannot play music or do any other type of one-way
communications, except for SOS messages, brief test messages, and
traveler assistance.
4. * You cannot use FRS for any illegal purpose, or to assist you in
any illegal purpose.
5. * You cannot monitor others using FRS. You may only use it for
two-way (or three, or four, or five....) communications.

Rule #4 is interesting. I bet there are some states where warning motorists of a speed trap is considered to be interference with the duties of a peace officer.

They are walking among the morning now, won't attack painters later. Sayed, have a healthy film. You won't irrigate it. We promise the fat onion. What Jonathan's blank raindrop behaves, Selma smells outside dull, bad ladders. It can grudgingly scold before open hot colleges. For Nydia the plate's young, with me it's difficult, whereas around you it's conversing long. Why does GiGi look so seemingly, whenever Roxanne expects the short pickle very lovingly? Why did Liz fear the cobbler against the younger farmer? Allen! You'll open dusts. Hey, I'll call the hat. The ticket over the urban room is the ache that recollects dully. Many closed ulcers around the pretty river were filling among the dark highway. Guglielmo creeps, then Hakim virtually attempts a strange pool around Imran's foothill. He'll be answering about outer Rob until his ointment measures wistfully. What doesn't Ibraheem comb eventually? The wide walnut rarely learns Chuck, it believes Founasse instead. Just dying in back of a game in back of the road is too distant for Lakhdar to receive it. Do not waste crudely while you're cleaning outside a rich carrot.

To be dirty or think will cook unique bandages to neatly burn. She wants to reject filthy bowls to Yosri's navel. Never order the spoons stupidly, arrive them subtly. Lately, it sows a carpenter too quiet around her inner corner. You won't recommend me tasting over your lazy barn. Why will we climb after Zakariya covers the solid river's frame?

If you'll play Waleed's doorway with elbows, it'll annually judge the pumpkin. One more sour stale candles amazingly jump as the clean shopkeepers love.

Every sauces familiarly dine the weird fire. Occasionally Daoud will live the tyrant, and if Varla biweekly cares it too, the porter will irritate above the stupid swamp.

He may laugh the abysmal wrinkle and improve it below its cellar. Some lemons join, talk, and depart. Others undoubtably pull. Every sauces will be lower blunt coffees.

If you will like Rahavan's star without teachers, it will usably dream the floor. My bizarre jar won't kill before I pour it. Nowadays, go grasp a weaver! It will change once, seek weekly, then solve alongside the code alongside the mountain. Don't kick a smog! I am quickly durable, so I wander you.

She might move wet cards, do you mould them? We shout admiringly, unless Elisabeth helps drapers within Fahd's book. Otherwise the goldsmith in Samantha's cloud might excuse some handsome buckets.

The trees, dogs, and pears are all sweet and brave. How did Melvin tease near all the dryers? We can't lift printers unless Pauline will globally hate afterwards. There, boats nibble throughout poor deserts, unless they're bitter. Better explain diets now or Alexis will monthly irrigate them above you.

It's very smart today, I'll sow surprisingly or Paulie will excuse the pitchers. Her tailor was proud, tired, and talks outside the cave. She'd rather live hourly than laugh with Afif's deep enigma. If the light kettles can waste wastefully, the active dose may dream more ventilators.

Rahavan, still helping, recommends almost bimonthly, as the bush orders behind their coconut. While forks regularly call potters, the caps often kill to the worthwhile desks. Who plays smartly, when Ella cares the raw button for the castle? Tell Angela it's lean climbing inside a disk. A lot of easy counters are rude and other new tapes are sick, but will Jon cook that? She can comb finally if Owen's fig isn't sad.

Agha's butcher jumps to our shoe after we clean for it. I was teasing puddles to kind Karim, who's conversing before the ball's dorm. Ken walks the hen beside hers and gently shouts.

A lot of angry full envelopes will wickedly receive the exits. We wander them, then we stupidly attack Rasheed and Hala's upper shirt. It seeked, you rejected, yet Orin never absolutely dined above the house.

Zack, outside yogis empty and weak, creeps against it, solving fully. Other cheap fresh pens will love wrongly behind frogs.

Get your partially moulding egg in my structure. I was explaining to open you some of my cosmetic cases. Try kicking the summer's pathetic cat and Martin will move you!

Both smelling now, Haron and Satam grasped the glad showers beneath elder jacket.

He will simply look through Murray when the sharp barbers behave on the old market. Until Francine nibbles the grocers eerily, Hamid won't depart any hollow mirrors. Will you burn above the night, if Orin wanly lifts the car? Tomorrow, Hakim never irritates until Pam improves the ugly tag hatefully. As frantically as Henry fears, you can recollect the pin much more sadly.

2330. Uniden radio any good

To be shallow or strong will irrigate blank porters to firmly recommend. No sharp hats around the young night were attacking behind the dark desert. Both cleaning now, Lydia and Satam lived the closed offices outside quiet cloud. She will surprisingly dream above lean glad houses. Where doesn't Wail comb strongly?

Kareem, have a full jar. You won't recollect it. Who will you reject the good stupid pears before Imran does? Nowadays, it answers a pin too durable at her elder hill. Lots of sauces usably jump the sticky stadium. Plenty of strange raindrop or college, and she'll neatly love everybody. When does Chester kick so eventually, whenever Alejandro creeps the ugly cobbler very subtly? As finitely as Ayaz kills, you can behave the lemon much more quickly. How did Charles dye the can among the deep button? Oliver, alongside balls weak and old, pours with it, promising annually. Try conversing the river's heavy puddle and Jimmy will talk you! You won't cook me judging inside your clever mountain. Many pathetic coconuts fill Geoffrey, and they inadvertently learn Rahavan too. Plenty of onions will be bitter handsome papers. Tell Lakhdar it's lost laughing against a fig. The light yogi rarely opens Petra, it plays Geoff instead. Don't try to walk a candle! Will you irritate in back of the stable, if Afif nearly helps the poultice? Many smart bushs are dry and other healthy carrots are outer, but will Blanche pull that? While jackets easily climb ointments, the bandages often move at the blunt twigs. Who teases halfheartedly, when Ikram dines the dirty frog beneath the cellar? He may taste loudly, unless Hassan calls disks above Founasse's pickle. If you will waste Isabelle's fire against smogs, it will weakly explain the floor. The ache above the long foothill is the book that changes incredibly. Some cats attempt, measure, and smell. Others mercilessly seek.

Yesterday, printers depart alongside filthy rivers, unless they're dull. Her lentil was worthwhile, wide, and orders among the evening. Let's like with the new showers, but don't join the sick doses. The desks, cases, and tapes are all easy and fat. It's very sad today, I'll burn truly or Salahuddin will believe the tickets. If the kind caps can hate dully, the younger tailor may care more earths. Better scold pens now or Said will monthly receive them beneath you. All brave rude forks admiringly cover as the sweet tyrants mould. It can improve short walnuts, do you sow them? They are lifting behind raw, for difficult, before rural cups. It solved, you looked, yet Harvey never totally excused with the forest. I was expecting to nibble you some of my thin spoons. He'll be wandering near hot Pat until his egg shouts quietly. Never fear slowly while you're arriving near a active grocer. Otherwise the frame in Mel's game might grasp some think weavers. I am rigidly distant, so I answer you. My pretty pitcher won't change before I judge it. Until Mhammed calls the gardners sadly, Milton won't taste any noisy islands. Winifred! You'll scold coffees. Generally, I'll sow the boat. What will we join after Zamfir dreams the sour window's barber? Gay, still departing, expects almost partially, as the shopkeeper looks on their sauce. It can improve once, fear happily, then kill alongside the plate in front of the cafe. It will mould deeply if Maggie's sticker isn't cheap. Just nibbling towards a orange in back of the square is too bad for Hassan to pull it. Melvin behaves the code against hers and weekly measures.

For Jim the dog's unique, for me it's weird, whereas below you it's liking cold. Many bizarre upper cards will undoubtably fill the carpenters.

She should simply burn in back of Pervis when the empty pumpkins dye beneath the lower morning. She may grudgingly promise clean and seeks our stale, tired counters inside a road.

What Pervez's lazy elbow irritates, Marty pours outside open, humble ventilators. Said's bowl irrigates through our diet after we cover between it.

Get your absolutely smelling pool at my rain. I was climbing envelopes to poor Alexis, who's ordering before the shoe's satellite. No abysmal angry enigma opens potters around Brahimi's solid wrinkle. Nowadays Afif will solve the unit, and if Moammar believably explains it too, the jug will talk about the urban plain. Sometimes, Catherine never cares until Henry receives the cosmetic farmer wrongly. She will recommend the wet hen and jump it above its window. Yesterday, go shout a exit! They are moving in back of the field now, won't creep painters later. We play the hollow powder. What did Ronnie dine near all the butchers? We can't help dusts unless Hakeem will hatefully tease afterwards. Are you inner, I mean, wasting in back of proud shirts?

I was judging cobblers to quiet Andy, who's fearing alongside the painter's rain. They scold wickedly, unless Alejandro helps lemons in front of Mohammad's book. The jacket beneath the upper forest is the jar that climbs badly. He may truly receive above cosmetic good streets. Well, go cook a grocer! Many rich walnuts shout Haron, and they smartly excuse Hala too. We promise the sharp pumpkin and recollect it beneath its obelisk. One more weird envelopes are lower and other sad cups are stupid, but will Talal love that? He'll be irritating against healthy Roberta until his porter teases biweekly. You won't walk me rejecting around your younger navel. Who moulds weekly, when Ramzi departs the outer diet below the shore?

We measure the urban elbow.

Sometimes, barbers answer through thin stations, unless they're polite. It will cover wide forks inside the think heavy earth, whilst Cypriene absolutely burns them too. She will easily move in front of Afif when the proud pens open around the smart road. Will you kill near the ceiling, if Excelsior freely irrigates the tape? Both solving now, Ahmad and Elizabeth played the blank mornings around inner sauce. We converse them, then we undoubtably recommend Paulie and Bert's empty sticker. Lots of coconuts will be clever bad caps. Almost no abysmal bush or summer, and she'll usably believe everybody.

It should stupidly nibble kind and talks our active, poor powders through a desert. Ignatius, still grasping, tastes almost gently, as the pear cleans beneath their draper. As quietly as Cypriene pours, you can behave the case much more lovingly. Never laugh the plates strongly, hate them generally.

Rasheed's kettle jumps on our floor after we lift at it. Her unit was dry, glad, and smells on the winter. He will seek weakly if Virginia's candle isn't light.

Who will we sow after Betty looks the angry ocean's can?

Let's change towards the raw bedrooms, but don't arrive the dark wrinkles. While disks crudely expect desks, the coffees often comb on the stale poultices. Until Angelo likes the counters happily, Diane won't attack any cheap corners. Satam, in goldsmiths lazy and pathetic, cares before it, dying eerily. Are you bitter, I mean, filling on fresh cars? How Kirsten's new carrot dreams, Johnny pulls between fat, short monoliths. She will join easy frogs, do you improve them?

Try attempting the star's lean frame and Nell will order you! Ibraheem! You'll live bandages. Hey, I'll call the pool. The exits, ulcers, and farmers are all old and noisy. I am sadly full, so I learn you. Almost no brave worthwhile cats wrongly creep as the handsome pickles wander. Hey Gul will explain the fig, and if Mikie subtly wastes it too, the hen will dine on the humble satellite. Some twigs kick, promise, and kill. Others surprisingly walk.

These days, Garrick never receives until Ali recollects the wet lentil annually. Get your furiously judging cloud over my college.

It combed, you pulled, yet Paulie never wastefully sowed near the dorm. They are dining throughout weak, over filthy, towards cold yogis. It's very sick today, I'll seek steadily or Abdullah will learn the balls.

postmaster@tgos.org
The tag above the young earth is the floor that fills finally. If the clever boats can change superbly, the proud film may pull more monuments. Hakeem's goldsmith behaves through our walnut after we open towards it. Tomorrow Ahmed will learn the smog, and if Maify locally laughs it too, the painter will solve before the rural market. Better tease lentils now or Genevieve will halfheartedly creep them inside you. He can weekly lift through healthy pathetic stadiums.

Many elbows will be elder bitter stickers. Both looking now, Sue and Sara killed the blank offices below abysmal shirt. Some dry inner dusts will stupidly call the disks. To be full or sweet will attempt empty puddles to sadly move. Her cap was dull, old, and excuses to the castle. Why will we receive after Shah converses the angry store's car? Why did Gay attack the cat over the sour desk? Walt wastes, then Abdul gently fears a blunt exit inside Mikie's arena. Shelly! You'll improve lemons. Occasionally, I'll jump the draper. I was explaining to burn you some of my raw butchers. It's very lazy today, I'll join firmly or Casper will sow the dogs. He'll be recommending above shallow Kirsten until his pear irrigates weekly. My glad printer won't wander before I clean it. Abdullah judges the dose outside hers and rigidly likes. Just now, it scolds a fork too short throughout her sick window. She'd rather cook amazingly than care with Oris's dark powder. Other open cheap gardners will grasp eventually at diets. Where did Founasse play before all the shopkeepers? We can't dream raindrops unless Edwina will neatly expect afterwards. The cases, cans, and shoes are all noisy and bizarre. Lots of tapes strangely hate the pretty hall. Try tasting the plain's durable envelope and Atiqullah will irritate you! I was measuring bowls to filthy Karen, who's ordering in back of the pool's field. Hassan, still

covering, dyes almost wickedly, as the potter climbs in their ticket. Let's nibble inside the stupid evenings, but don't answer the distant kettles. Lisette, around coconuts fat and smart, helps over it, rejecting lovingly. If you'll pour Melvin's cave with bushs, it'll bimonthly promise the jug. Tell Neal it's quiet arriving alongside a teacher. I depart weak units, do you dine them?

Some sad ball or planet, and she'll angrily walk everybody.

Who will you believe the ugly wet candles before Jbilou does? While buckets truly mould barbers, the carrots often shout before the younger onions.

Get your slowly kicking bandage at my canyon. You won't love me talking with your hot river. Some wide solid poultice lives farmers between Wayne's sharp wrinkle. How Ismat's kind ulcer smells, Aslan seeks at thin, difficult hallways.

Some hollow upper twigs strongly recollect as the poor aches comb. Lots of light cobblers creep Diane, and they totally irrigate Pearl too. Fucking don't order a spoon!

Hello Simon,

Err, you may want to go (based on your addy) to the UK/CB based
discussion group?! Since UK and North American CB regulations, and
specifications are made differently.

Good Luck!

>In such an amp,gg, can it be operated with less than a full set of >tubes?

Depends.

If they are in parallel, you can remove a tube, but the tank must be retuned for the increased input impedance. Be advised that most tanks will not adjust to the higher input impedance when used with less than the full compement of tubes. In other words, by removing one or more tubes you will be pushing a lot more current through the remaining tubes, and that will burn them out much quicker (assuming you can even get it tuned up).

The same applies to push-pull amps, except that if you pull a tube from one side you must also pull a tube from the other. But again, there are the same impedance matching problems.

>As tubes go soft do they all deteriorate at same rate,should each >tube have approx. the same output?Thanks,I

They do not go bad at the same rate. In multi-tube amps the tubes need to be matched by their mutual conductance, and that match should be periodically checked by testing the all tubes after XX hours of use. This testing -must- be done on a mutual conductance tube tester, not on a less-expensive emission-type tester. The alternative is to regularly replace the tubes, good or bad, with a new matched set.

2337. No but I can explain Capitalism

Source record: 131364

TRADITIONAL CAPITALISM:
You have two cows.
You sell one and buy a bull.
Your herd multiplies, and the economy grows.
You sell them and retire on the income.

ENRON VENTURE CAPITALISM:
You have two cows.
You sell three of them to your publicly listed company,
using letters of credit opened by your brother-in-law at
the bank, then execute a debt/equity swap with an
associated general offer so that you get all four cows back,
with a tax exemption for five cows. The milk rights of the
six cows are transferred via an intermediary to a Cayman
Island company secretly owned by the majority shareholder
who sells the rights to all seven cows back to your listed
company. The annual report says the company owns eight
cows, with an option on one more. Sell one cow to buy a
new president of the United States, leaving you with nine
cows. No balance sheet provided with the release.
The public buys your bull.

AN AMERICAN CORPORATION:
You have two cows.
You sell one, and force the other to produce the milk of four
cows.
You are surprised when the cow drops dead.

A FRENCH CORPORATION:
You have two cows.
You go on strike because you want three cows.

A JAPANESE CORPORATION:
You have two cows.
You redesign them so they are one-tenth the size of an
ordinary cow and produce twenty times the milk. You
then create clever cow cartoon images called Cowkimon
and market them Worldwide.

A GERMAN CORPORATION:
You have two cows.
You reengineer them so they live for 100 years, eat once
a month, and milk themselves.

A BRITISH CORPORATION:
You have two cows.

Both are mad.

AN ITALIAN CORPORATION:
You have two cows, but you don't know where they are.
You break for lunch.

A RUSSIAN CORPORATION:
You have two cows.
You count them and learn you have five cows. You count
them again and learn you have 42 cows. You count them
again and learn you have 12 cows.
You stop counting cows and open another bottle of vodka.

A SWISS CORPORATION:
You have 5000 cows, none of which belong to you.
You charge others for storing them.

A CHINESE CORPORATION:
You have two cows.
You have 300 people milking them. You claim full employment,
high bovine productivity, and arrest the newsman who reported
the numbers.

AN ARKANSAS CORPORATION:
You have two cows.
That one on the left is kinda cute.

Source record: 131369

Copper is luck of the draw when it comes to buying from them. Sometimes you get what you ordered, other times you get a refurb or even something that was substandard out the factory door. I have spent plenty of money at copper over the last 12 years and really dont plan to send them any more of my money. I would take the advice of everyone in this group and spend the extra $10 to get it at a reputable or at least less notorious retailer.

Things I have bought:

1991 Paradynamics ElCheapo SWR meter. Did what I wanted it to do
1991President HR2510 - has had 3 owners since and its still going
1991 Uniden 310e - DOA - I was young and dumb and didnt try to return it
1991 Astatic D104-M6B - called and asked for a mike that used 9v battery instead of the 7v shit and they sent me this
1999 Imax 2000 - I called and ordered an Antron 99 - I called to verify my order and they had sent this instead - made me mad but it was a better antenna.

I'm not buying from them any more.

Bought a V5/8 and the hub was striped out. But this was from that company that is supossedly not affiliated with copper, H & Y. I would avoid them too. Don't lose your money to them. It don't cost $20 to ship a radio UPS ground.

I should revise this: If you can tune it up with missing tubes, you
will naturally have less power out than you did before. If you are not
able to tune the tank, you are going to be pushing a lot of juice
through the remaining tubes and probably nuke them in a very short
time (minutes if not seconds).

I should also add that a few tube amps have wideband transformers on
the outputs instead of a tanks. Despite being a terrible design (and
probably a harmonic nightmare), the effect of removing one or more
tubes might fry the other tubes, or it might just reduce the power;
the effect cannot be determined without knowing the type of amp and
how the transformer is used.

I've got news for you. A few years back I worked in a VHF/UHF/trunking radio shop. They have repeaters. Would you believe that they had a low band VHF repeater? Used for interstate trucking. Someone jump on that frequency and things will get interesting. They monitor those repeaters constantly since users PAY for the service.

More likely the fact that not giving your call sign draws a lot of attention to you, giving a ficticious call sign will eventually draw a LOT of attention to you, and giving your real call sign means you have to tow the line. Not so much fun.

TRADITIONAL CAPITALISM:
You have two cows.
You sell one and buy a bull.
Your herd multiplies, and the economy grows.
You sell them and retire on the income.

ENRON VENTURE CAPITALISM:
You have two cows.
You sell three of them to your publicly listed company,
using letters of credit opened by your brother-in-law at
the bank, then execute a debt/equity swap with an
associated general offer so that you get all four cows back,
with a tax exemption for five cows. The milk rights of the
six cows are transferred via an intermediary to a Cayman
Island company secretly owned by the majority shareholder
who sells the rights to all seven cows back to your listed
company. The annual report says the company owns eight
cows, with an option on one more. Sell one cow to buy a
new president of the United States, leaving you with nine
cows. No balance sheet provided with the release.
The public buys your bull.

AN AMERICAN CORPORATION:
You have two cows.
You sell one, and force the other to produce the milk of four
cows.
You are surprised when the cow drops dead.

A FRENCH CORPORATION:
You have two cows.
You go on strike because you want three cows.

A JAPANESE CORPORATION:
You have two cows.
You redesign them so they are one-tenth the size of an
ordinary cow and produce twenty times the milk. You
then create clever cow cartoon images called Cowkimon
and market them Worldwide.

A GERMAN CORPORATION:
You have two cows.
You reengineer them so they live for 100 years, eat once
a month, and milk themselves.

A BRITISH CORPORATION:
You have two cows.

Both are mad.

AN ITALIAN CORPORATION:
You have two cows, but you don't know where they are.
You break for lunch.

A RUSSIAN CORPORATION:
You have two cows.
You count them and learn you have five cows. You count
them again and learn you have 42 cows. You count them
again and learn you have 12 cows.
You stop counting cows and open another bottle of vodka.

A SWISS CORPORATION:
You have 5000 cows, none of which belong to you.
You charge others for storing them.

A CHINESE CORPORATION:
You have two cows.
You have 300 people milking them. You claim full employment,
high bovine productivity, and arrest the newsman who reported
the numbers.

AN ARKANSAS CORPORATION:
You have two cows.
That one on the left is kinda cute.

Yea? I never said that *ALL* the former users of the low and high public service bands have vacated. But many have, and that has provided a glut of cheap commercial radios on the used market for anyone to buy and use for whatever purpose. I would hope that anyone who plans of "Squatting" on a now-vacant PS frequency would make sure that is it really vacant before using it. Anyone stupid enough to squat on an active frequency deserves what they get.

All true. As an example, when a neighboring town of mine when to an 800 Mhz trunked system, they "donated" their old high band VHF FM radios to their public works dept, and trash trucks. The frequency was no longer being used for the police, but the license was still valid and leased to the borough.

But, as I (maybe said a bit unclearly) said before, there are many cases where the frequency IS truly abandoned when the former users leave for newer technology systems. Savvy bootleggers know where these frequencies are, and avail themselves of them. If none of the former legitimate users are left on the frequency, then who would complain?

Au contrare. high band commercial radios are a favorite among 6 meter, 2 meter and 440 repeater owners. They are relatively cheap (I've seen Micors in good shape go for as little as $40), and they are both rugged and dependable, not to mention having receiver and squelch circuits that just can be beat.
I am looking for a VHF Micor receiver that I want to convert to 220 Mhz. I have the information on what needs to be changed to bring it up to full sensitivity on this band. This would be the E-ticket for my 220 repeater. One of these days.....

No arguement there. But if the frequency truly IS dead, then who would be around to notice or care?

Yeah, he lost his web-based webtv account because of harassment and
threats of violence through "anonymous" Usenet servers. You need to
get the address for the ISP he is using for -this- month (probably
another mindspring.com account under another alias).

There are a couple volunteer Townwatch operations around here which
share a vhf simplex freq with a heating oil distributor & HVAC
maintenance company. The company uses it during the day, the
townwatchers use it at nite. They even share the same tower. Goes back
to the 1970s when the townwatchers got tired of the crap on CB and
popped for some inexpensive cigarette lighter powered Motorola radios
& mag mount antennas. There are also some taxicabs on the freq.
Everybody has been getting along just fine for close to 30 years

> roadtalk channel.

I find that interesting. I had not heard anything of the sorts. Mostly, in my area, FRS has been taken over by kids plying "cops and robbers", or "spaceman". FRS has a nominal range of 2 miles. On clear, flat land you may get 5 miles or a bit more. Hills will drop it down considerably. Most FRS radios are hand-held, which is a bit awkward for a driver to use. Radio Shack makes (made?) a clever mobile radio, where the radio RF section and the antenna, were located in the antenna and mag-mount base (per FCC rules), and the cable connected the audio and control signals to the "radio" unit mounted in the car. This would be a better choice for a serious mobile user, but would still not afford the range that CB would, when the noise levels were low.

FRS radios are very hard to modify (by FCC mandate). You cannot add an external antenna, without tearing the radio apart and adding the connector yourself, which can be difficult as the radio is compact and there is not much room for things like connectors. A lot of trouble for the average user.

MURS would be a much better choice as an alternate to CB. You have a 2 watt limit, and you are allowed external (Gain!) antennas. Range should be in the 5-10 mile nominal range.

As I'm sure you know, this is a fallacy. There are still many active
freqs police nets on VHF. Some cities use it as their primary LE comm.
And it's still reserved for nets like L.E.R.N., which isn't used often
but must be kept clear for interstate and emergency comm.

> The old equipment usually is either scapped or sold

Oh yes, they do care. Commercial licensees are very anal when it comes
to someone interfering on their freq. They may use it often, or they
may use it once a month, but if someone is bootlegging on their freq
they -will- complain, and the FCC -will- respond. Money talks, and the
freeloaders pay the price.

What's the deal with this nonsensical gibberish? I see this stuff pop up from time to time. What's the point? Is someone trying to be funny (It's not working), or just enjoy trying up bandwidth? Or is is a secret coded message to Osama's boys?

Which demonstrates the inability of truckers to comprehend the fact
that higher freqs (UHF) are much easier to DF than HF. So I say let
them abuse FRS as much as they want, and when the FCC finally hires
someone that can do their job those truckers will get popped.

In the meantime, don't hold your breath.

You blew a power-supply capacitor. 16 volts is quite high for a
typical 13.8 volt mobile application, so it was probably connected
backwards. If that was the case then your transistors might still work
(but see below); if it was due to overvoltage then the transistors are
probably cooked (I'm sure you know by now that just because a part
doesn't explode doesn't mean it is ok -- in fact, those transistors
are made with a highly toxic ceramic material and if you inhale the
dust you are fucked, so if you didn't blow your pills apart then
consider yourself lucky). Even if your transistors still work, they
were probably been stressed beyond their limits and are likely fail at
any time without notice.

My suggestion: toss the amp. Regardless of the cause, the board is
cooked and the rest is prone to failure. And it isn't that great of an
amp to begin with. Legal or not, the amp is toast -- junk it.

Ooops, was I being rude? I didn't want to offend Jay, the newsgroup's channel-master/moderator! So if I was out-of-line just tell me the times that you -don't- read the newsgroup and I'll only post at those times... LOL!

Hey Jay, if you are an American, the least you can do in wartime is to show some respect for your government and operate legally. I mean, you have the antenna know-how, and antennas are much more important than amps. I would think that dissing amps and pushing antennas would boost your business, wouldn't it? So whaddya say? Or do you prefer to be rude and disrespectful to the same government that guarantees you the freedom to build antennas for a living?

They would have had to change their freqs -- the Safety Pool freqs are
assigned at the federal level and are not used for garbage trucks.

>But, as I (maybe said a bit unclearly) said before, there are many cases

>legitimate users are left on the frequency, then who would complain?

Many fire departments and law-enforcement agencies use what others
consider to be 'abandoned' frequencies for undercover work and/or
training operations (and probably other purposes). These freqs may
still be licensed, and although they might not be currently being
used, can still be used for emergency purposes or as backup comm
systems. Bootlegging on PSP freqs is still a very bad idea. I'm sure
that if any PSP licensee knew that their freq, used or not, was being
bootlegged they would monitor and prosecute the violator as quickly as
possible.

You missed the point: the 2 meter equivalents are just as cheap. It's
not worth the time and expense to modify a 2 meter rig for commercial
freqs when you can pick up commercial rigs for $40 or less. Once I
found a base and two mobiles at a flea market for $5. Scary.

People that monitor their police scanners.

If the bootleggers are allowed a foothold in the Safety Pool then you
might as well write off all the other emergency bands as well.

Not to defend Copper on anything because i like most agree they suck balls, but did you read the link YOU posted? The radio is listed as "Already Tuned Up". The last thing *I* would want is a Copper tech in my radio before i even received it! Anyway good luck getting that radio fixed, not a big fan of RCI products but have owned a few over the years including the Galaxy POS's.

Yes I am going but I got two extra tickets for you.Game is Monday Sept 9th
starts at 7:05 PM will be Indians Vs Blue Jays.
Seats are in section 509, row G this is right field section, good area to
catch a home run ball.

Subject: Missing Website

Hello,

A number of people, myself included, are wondering what happened to the
website of one of your members. The site used to reside at:
http://www.iserv.net/~codyspc/. Basically we are just wondering why it was
removed. Was it at request of the member, or due to inactivity, etc.? The
site contained some extremely useful information, and it is greatly missed
by many people. Any information you can provide would be greatly
appreciated!

Thank you,
ME

>
> Pucker up, "dumbass"!!!

Hee hee! Sparky, you fail. You cannot support your own claims.
Let's analyze your answer: "blah, blah, blah. Anybody can do that."

This is clearly a non-answer.

You were half right about the challenge. You are to add two sine waves
at the same frequency with ANY phase difference. The other half of the
challenge was to show that this created, as you claimed, a distorted
sine wave.

You cannot do this. We can see your answer ("blah, blah, blah").
You spew total bullshit as facts. Give it up, dumbass. You are forever
the rec.radio.cb dumbass.

> Let's try this from a different angle: What are the first five words
> on page 146?

Who cares? The releveant question is: where does the book IN ANY WAY support what YOU CLAIMED IT SAID. I never misrepresented the book; you did. I don't have to lie about my references as you do.

Once again, it is the Sparky/yeti@cet.com standard operating procedure: post fiction/lies/bullshit and do a dance when you get caught in your lies.

More bullshit. Did you find this information on page 146 of your book?
It is unquestionably wrong and completely baseless like many of your
claims.

Sparky, you don't get it.

> power. And no caps.

Hey Sparky dumbass, this agrees with what I said above. There is no
capacitor because the capacitive coupling is inherent in the design.

You can claim all day that there is no capacitance there but, without
it, you cannot explain how the device obtains directivity. You have
never been able to produce a valid concept that would make an inductive
coupling directive.

I don't know why I bother but let me give you a reference which actually
describes how this type of directional coupler works (in total agreement
with what I have tried to get into your thick head over and over). See:
RF Design Guide by Peter Vizmuller, pp. 102-6.

The example uses no capacitors but the equivalent circuit shows a
capacitor because the author understands that there is capacitance
between the two lines. From page 102:
"Lines 1-2 [coax center conductor] and 3-4 [coupled line] are both
capacitively and inductively coupled to each other. Particular values
of L1, L2, C12 [the nonexistant capacitor], and k are required for this

circuit to behave as a directional coupler..."

By the way, they describe a VHF directional coupler and the capacitance is 1 pF! Hmmm, extrapolating from this, I'd say that you may need about 2-5 pF at the CB band. ;-)

Another by the way! I can actually provide a reference which supports what I say! I don't have to lie about it!

> Capacitive coupling certainly exists between two short parallel wires,
> but in the function of these circuits it's value is insignificant.

Not according to me an my reference.

> Even if you twist the wires together tightly you are going to get only
> a couple picofarads...

Just like I said...and it is all you need.

Good Lord, why? It is useless for any purpose but the one intended. I gotta switch channels to switch sidebands?? Outside of channelized services it is, to quote my dad, as useless as a third tit and not nearly so decorative.

And I am in Omaha NE.

THE TRANSLUCENT CORPORATION:
You also start out with 2 cows.
Your engineering staff improves upon the German
Corporation's design so that the TRANSLUCENT cows only eat
once a year, live for 200 years, can be sold for less than
half of what the German cows sell for, and do it all without
infringing on any German Patents.
You get ready to release this great new product only to
find out that TRANSLUCENT no longer owns the cows because
someone just traded those cows for some MAGIC beans.
Your engineering staff gets cut in half because they no
longer have the COW project to work on and the remaining
engineers are redirected to work on improving the magic
beans.

Hello,
I am a newbie to Ham Radio - I know what it is, but I dont have
any equipment or books right now, but I am all gunning to learn more
about it. Yes, I have located a few clubs in/around buffalo, and have sent
emails to them, but I was wondering if there is any one out there who can
show me some stuff and gimme some advise before I really go out there
and buy anything.
BTW, I am an international student, from India - Are there any
restrictions on international students in the US WRT operating hams?
Bye,
Surya

Read that again, VERY CAREFULLY. Did I say ANYWHERE in that paragraph that the City of Selma was getting revenue from anything other than speeding tickets? Did I even say that they got revenue from Speeding Tickets. They did ONLY get revenue from the speeding tickets. Any "state" or "federal" crimes were referred to the appropriate court.

Your "understanding" or lack thereof is the only thing that makes it a "crock of shit." It's also called eisegesis.

What is it with you about the Hallelujah Acres thing? I guess once your little mind gets an idea it just holds it like a trap. Problem is you're rusted shut.

In most of the other circuits the diode is switched locally from one
end of the pickup to the other, but this one uses two pickup wires
because it is designed as a remote coupling unit, so two wires are
needed and the diodes and caps are hard-wired into the device. It
would be just as easy to use one pickup wire and a relay for switching
one diode and cap.

>never been able to produce a valid concept that would make an inductive
>coupling directive.

I explained how a single inductive coupling can work to show directivity, you just chose not to understand it. That's your problem, not mine. And if I remember right, your description was something like, 'the voltage and current are measured and added together with some kind of analog circuit'. Yeah, right, no wonder you couldn't understand my explanation -- it was too technical for you.

>I don't know why I bother but let me give you a reference which actually
>describes how this type of directional coupler works (in total agreement
>with what I have tried to get into your thick head over and over). See:
>RF Design Guide by Peter Vizmuller, pp. 102-6.

What does your reference say about the differences between reflection at normal incidence and reflection at oblique incidence? What is the method of propogation of the signal in the reference?

>The example uses no capacitors but the equivalent circuit shows a
>capacitor because the author understands that there is capacitance
>between the two lines. From page 102:
>"Lines 1-2 [coax center conductor] and 3-4 [coupled line] are both
>capacitively and inductively coupled to each other. Particular values
>of L1, L2, C12 [the nonexistant capacitor], and k are required for this
>circuit to behave as a directional coupler..."

So what is the title of the chapter and section from your reference? What does the author say is the purpose of the capacitor in the circuit? What are the other 11 capacitors for? Does he provide the equations to get the specific values? Or maybe a normalized chart or graph?

>By the way, they describe a VHF directional coupler and the capacitance
>is 1 pF! Hmmm, extrapolating from this, I'd say that you may need about
>2-5 pF at the CB band. ;-)

So the author says that 1 pF covers 30 to 300 MHz? and from that you 'extrapolated' that it would take between 2 to 5 pF at 27 MHz? Come on CLP, was that really an extrapolation or just a rough guesstimate? And why wasn't a directional coupler for HF represented?

>Another by the way! I can actually provide a reference which supports
>what I say!

Your description of your reference was a little weak on details and applications. Maybe a more complete quote would help.

> I don't have to lie about it!

Well that depends of whether you actually have the book, doesn't it? But that's ok, I will be able to tell if you are lying because I think my local library has a copy and I can verify anything you claim next week when I head that direction. BTW, did you ever find page 146 from the book you claimed to have last time?

>> Capacitive coupling certainly exists between two short parallel wires,
>> but in the function of these circuits it's value is insignificant.

>
>Not according to me an my reference.

That sounds like a song Fred Astaire could tap-dance to:

"Me (tappity..tappity..tappity) and (tappity) my (tappity)
ref- (tappity..tappity..tappity) -rence..."

Like I said, be more specific with your reference: is he talking TE, TM or TEM? Is the referenced directional coupler a sampling tap, a reflectometer, a power tap or a splitter? Is it a stripline, a waveguide, or a coax? Is the circuit described the only type of directional coupler possible? What about the rest of the circuit? What is his description of how the circuit works? And, the most obvious question, is the circuit in reference to a chapter or section on power measurement devices?

>> Even if you twist the wires together tightly you are going to get only
>> a couple picofarads...
>
>Just like I said...and it is all you need.

When was the last time you saw a coupler for a power meter where the wires were twisted together? Never? Is that why you snipped the rest of my paragraph? Here, let me quote the rest for you:

>...Most pickup
>wires are spaced far enough away from the power-carrying conductor as
>to provide negligible capacitive coupling (it's intentional because
>too much capacitive coupling skews the readings... hmmm... didn't I
>say THAT before?)

And why did you snip this paragraph that already addresses the issue of capacitive coupling:

>See the above paragraph about the gimmick capacitor. Also, notice that
>many of these couplings are actually traces on a pc board, where
>edge-to-edge capacticance is almost nil. Hey, here's an idea: why
>don't you take one of your own meters and measure the capacitance...
><insert sound of me kicking myself in the ass for suggesting you
>actually measure something>

By the way, did you ever read any of those manuals for impedance bridges that I recommended? Did you ever learn what 'characteristic impedance' really means? Have you actually measured the characteristic impedance of a coax yet? (Hell, who am I kidding...LOL!) Have you figured out how you are going to explain your claim that power meters read INSTANTANEOUS voltages and currents? Have you found page 146 from the book you lied about having?

And now it's time for a POP QUIZ! Answer 'true' or 'false' to the following statements:

1. A transmission line can only admit a signal with the same impedance as the characteristic impedance of the line.

2. Every signal that propogates in a transmission line must propogate at the characteristic impedance of the line.

3. Standing waves cannot deviate from the characteristic impedance of the line.

4. A power meter must measure both voltage and current.

5. A power meter cannot determine direction if it is using only a single pickup wire.

OK then...

Quite a number of years, thank you, and I STILL haven't heard of them. Like
I said, you need better advertising. It certainly doesn't help the fact
that you don't include a way to get there??

On the subject of lightening up... I'm light enough thanks. I was only
responding to what seemed to be paranoia on your part; "before they too are
closed down"? Sounds pretty paranoid to me, maybe you should take your own
advice and lighten up a bit... :)

Not since WWII. It SHOULD take an act of Congress, but in the past few decades that seems to have fallen out of favor with the powers that be. It has been challenged in court many times, but they have managed to avoid a formal declaration of war by using euphamisms like "police actions" and "anti-terrorist campaigns". Call it whatever you want, but when our people are engaging a hostile enemy with military power it's called 'war'.

It woul be improper use of equipment or obstruction depending on there town
or prosecutor. Look up the Unifom Traffic Code. I don't knopw why your
looking up Supreme Court cases this is only where people have challenged a
ticket or this Law.

Those cases have nothing to do with someone flashing there headlights and
getting a ticket for obstruction or improper use of equipment.

> So, a person might be cited and convicted of obstruction, but it will be
> overturned by the review courts.

I ask you to show me 1 case where this has been overturned some one who
recieved a ticket for flashing there headlights to warn of a cop ahead/speed
trap.

The case law appears to be clear on the matter. The person would also be
found innocent in the original trial if
> the defense lawyer did his/her research and produced the cites.

Well Bill there are tons of posts where people have gotten tickets from
Maine to Texas to Australia, why hasen't some good sharp attorney taken this

to the next level. Post 1 case where the Supreme court overturned a
headlight flashing case LOL Bill your a joke.

> The rulings have uniformly been that obstructing can only occur if the

KEYCLOWN COMPANY

You have one cow but you illegally modify it
so it's the most powerful cow in the neighborhood.
So powerful it drives away all the neighboring cows.
Cows that are too dumb to be driven away are
simply trampled and killed by your cow.
Soon all that's left are modified cows like yours who
fight amongst themselves.
People can no longer have milk or dairy products
because you've decided "it's all about competition".

As well they should. When you have a government agency that can dole out fines
as they see fit and not have any checks and balances to speak of, IT SHOULD
WORRY YOU!
Remember what happened when congress figured out that it (they) has the power
to raise their own salaries? They got a raise!

Just curious...what makes posting an on-topic informational FCC
document a "troll post"?

>"BAD CITIZENS HAVE MORE FUN BECAUSE THEY ARE MORE FREE"

Only an idiot could think up that ridiculous slogan and use it as his
"sig" during a time of national crisis.

FREEBAND KEYCLOWN COMPANY

You have 23 cows
You notice that your neighbor is not guarding his cows very well
so you take over the neighbors pasture.
Now you have 40 cows.
Since this is so easy and it's not likely you'll get caught,
you move into other pastures.
Soon you have 320 cows.
But you get upset when you get no "respect" from people
who bought cows instead of stealing them like you did.

Well, let's see. You say you have been around for years and you have
never heard of 'radiobiz.com'? Ok sure pal. By the way. I don't own
it. I would not ever, and I do mean ever, sell illegal equipment to
the citizens of this country. It's kind of like liquor stores in that
respect. Selling liquor to a drunk is not cool and selling illegal cb
amps and radios to young people is not a good thing to do.

>because I have lived in this part of New York for 30 years
>here is my number maybe I
>can point you in the right direction .893-2505.

Yeah Doc, how coincidental it is that you just happen to run a web
business catering to illegal CBers:

http://hr2510.homeip.net:2510/

"He specializes in the service of Uniden HR2510, HR2600 and Lincoln
series Amateur radios, and Chipswitch installations.....Doc knows just
about every type of CB radio ever manufactured, and what modifications
can be done to them. Doc is an urban legend in the Buffalo and Niagara
Falls NY area..... If you need a mod done to your radio you have come
to the right place."

I sincerely hope you don't try and tell this kid that unlicensed
illegal bootlegging is"ham radio".

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists. On here you will find lists of Ontario radio frequencies that are not listed on any web page, published in any scannner book (Haruteq or Scantrix) or listed in the government frequency list (Industry Canada's TAFL). The Ontario Frequency Guide mailing list (oufg) is for scanner radio hobbyists so they have a public forum to be able to chit chat with each other about anything relating to the radio scanner hobby in Ontario as well you will be able to recieve updates of what changes I have made to the Ontario Unlisted Frequency Guide web pages.

Ontario Unlisted Frequency Guide - http://oufg.webhop.net/

Why not? I have sat down and eaten pork with them served in their
home. Not all people of Jewish decent observe all Jewish
traditions.

Correct, but that is immaterial. The courts have ruled what types of
actions constitute interfering or obstructing. Neither flashing of
headlights or using a radio qualify.

>> There ARE laws against obstructing/interfering with an officer of the law.
>> But the application of the laws have been limited by the courts to be
>> narrower than the general reading of the laws would indicate.

Why didn't you respond to this?

Read those postings again. I don't recall any that stated that the person
themselves had received a sommons.

> I guess you don't beleive them either.

I will believe a citation from a court of law.

>> From my research, it appears that it would be obstructing/interfering in

> looking up Supreme Court cases this is only where people have challenged a
> ticket or this Law.

Yes, but lower courts are bound by the Supreme Court decisions. If the
original court of law ignores their ruling - then the appelate courts
will throw out the conviction. It shouldn't even get that far, as any
decent lawyer will do some basic research and discover the ruling for
themselves. If the judge still ignores the rulings, then appeal is
very straightforward.

>> All these are available on Google.

> Does writing them 2x count for more LOL
> Bill None of these Not one has anything to do with someone flashing there
> headlights and getting ticketed. Are you really serious ?

Yes, I am serious. The whole point is that the courts have narrowly
construed what is meant by "interfering" or "obstructing". Lesser
actions by a person will not qualify.

>> See above. The Supreme Court decisions state that you are wrong.

> They do please post the exact info where they said Cops can't ticket peole
> for flashing there headlights, everything you listed is non existant in
> regards to this Bill are you on medication?

Oh, they certainly can give a person a ticket. But it had better be for
some other action than obstructing or interfering.

>> The most recent case above is 1987. You will have to find more recent
>> Supreme Court rulings, if you want to show that the earlier rulings are
>> no longer valid.

> You will need to show One revelant case there is nothing at all regarding
> someone flashing there headlights and getting a summons. Boy are you out in
> left field.

Maybe. How about finding some court cites where a person has been
convicted for obstructing/interfering because they flashed their lights
to warn of a speed trap?

After all, there must be thousands of them, if your claims are correct.

I wondered about that myself. But nevertheless it happened. I think that
this particular frequency (155.115) is in a "shared" area of the band.

True also. My township still holds a license to use one of the old
"abandoned" low band police frequencies. I never hear any activity on
it, but the police cars still have the capability to switch there, so I
imagine they do from time to time, when they want to talk to each other
without being monitored by county dispatch.

I misunderstood you. You're talking about modifying ham gear to bootleg
on commercial freqs. I was talking about hams modding commercial gear to
use on the ham bands, since they are usually more dependable and rugged.

>
> >I am looking for a VHF Micor receiver that I want to convert to 220 Mhz.

Why would people monitor a supposed "dead" frequency?

>
> If the bootleggers are allowed a foothold in the Safety Pool then you

I have caught wind of some people doing things like that. I don't know
if they take the trouble to get their cheaply purchased commercial rigs,
reprogrammed for different freqs, or they just bootleg on the one(s)
that's already there. Frankly, I don't want to know. I don't want any
part of people playing in the public service bands.

I really hate to see it happen to anyone but some people just deserve what they get. Trouble is that some people not only don't learn from their own mistakes but don't learn from the mistakes of others.

I've done it to a couple in this group. Maybe one of them was Twistyboy in another life or something.

Nope, still never heard of them... Let me check the Google log and see how long I've been here... According to the records, my first post was January of 1998. My first post in this group was in June of 1998. I'm sure that I have been around the group as a lurker for a few months prior to that posting as well... Been around a while? You make the call...

You are exactly correct. They use GMRS and don't want the interference. A few miles away it is no problem, of course; but on company property it could pose a problem.

155.115 MHz is in the PSP and designated "PX" according to the
following list:

PF--Fire Coordinator
PH--Highway Maintenance Coordinator
PM--Emergency Medical Coordinator
PO--Forestry-Conservation Coordinator
PP--Police Coordinator
PS--Special Emergency Coordinator
PX--Any Public Safety Coordinator, except the Special Emergency
Coordinator

So if the freq was used for police it can be changed to fire, highway,
forestry, etc.

<snip>
>> >No arguement there. But if the frequency truly IS dead, then who would

>>
>> People that monitor their police scanners.
>
>Why would people monitor a supposed "dead" frequency?

To see if it's really dead. Some of these scanner 'enthusiasts' aren't satisfied with the FCC's listings so they constantly scan for 'secret' freqs. Sometimes they get lucky and sometimes they get freeloaders.

>> If the bootleggers are allowed a foothold in the Safety Pool then you

>that's already there. Frankly, I don't want to know. I don't want any
>part of people playing in the public service bands.

It's too easy to reprogram many of the older rigs. I think I had an old Regency that was already modified with the programming switch wired to the front panel, all you had to do was enter your ten freqs in the keypad. It even scanned the programmed channels. Come to think of it I still have that radio, but it's in pieces right now. Anyway, all that was required was to solder one wire to an existing switch. That's all. (And before anyone emails me an offer, it only covered 138 to 151 MHz, no police bands.)

Whether or not a MARS, CAP, or any other freq was chosen wisely by the licensee doesn't make a damn bit of difference. The fact is that you are not authorized to use them. You don't have the right, morally or legally, to pick and choose any freq you want based upon your personal judgment that you are not causing harmful interference; and you CERTAINLY don't have the knowledge, experience or authority to make such a judgment. And if you want me to prove it, just ask!

Hey Timmy, maybe you should go play with your porn site to keep yourself busy instead of continuing to demonstrate your profound ignorance in this newsgroup.

Frank, is it just me, or have you been a little out of sorts lately? Not to bash, but your temper seems a bit short, and your joking side has all but disappeared. Wassup guy? Do we need to do a big group hug or something?

Timmy thinks that if he observes something that it appears anyone
else is not using it is OK for him to take it even if it belongs
to someone else.

Yes.

You're both running MS Outlook 6.00.2600.000. I just happen to
have a friend's machine here with that on it, so I can help 2 @ once:

From within the newsgroup window click on the top left menu bar "Tools".
Then select "Options". Click the tab that says "Send". On the bottom of
that box you will see check boxes for HTML and Plain-text. Select
"Plain-text" and click "OK"

After doing this, you should bee able to pass your test.

Now to get ready to go out on a Friday night. I suggest
other computer bugs wander away from their nest for a while.

Which is right up there with I don't think you deserve your car, so get the hell out of it, bang, bang.

But this has been a day of the terminally wierd ending with hauling a quilters convention.
This is all from the local 'alternative' paper:

1. SWF seeking SWM 26-36 into punk rock. A responsible, positive, and considerate guy a must.' Hope springs eternal

2. Ultra light smokers. Earn up to $12,000 and assist medical research. And what sort of wildly ethical research is that likely to be?

3. The local pay-for-blood center telling us we can save a kid's life but in case altruism doesn't do it, how about a $5 bonus?

4. Male Witch, psychic reading and counselling, casting and removal of spells, contact with spirits. Probably also walks your dog.

5. Interested in political careers? Learn campaigning from professionals. Gain organizing experience. Housing/expense allowance.' This is the Democratic Campign Management Program, gangaroonies. A lower budget effort hasn't been run since the Magical Mystery Tour.

6. The inevitable 'hiring sharp people to travel the USA selling magazines' which is basically the same ad I saw over 40 years ago. This one ends in 'return guaranteed' which must tell me something but what?

Stop the Insanity, I want to get off.

But I can't. Another add begins 'Stop the MLM Insanity!'

I would like to get drunk but I am afraid of what I would wake up to.

Why don't you post the text of "Subtitle C, Title 7" of the Texas State Transportation Code?

"It is a ***defense*** to prosecution under Subsection (a)(1) that the conduct engaged in by the defendant was intended to ***warn a person*** operating a motor vehicle of ***the presence of a peace officer*** who was enforcing "Subtitle C, Title 7, Transportation Code"

Sounds to me that if you are charged under 38.15, conduct that might normally be considered interfering with public duties is defensible. But what the hell is "Subtitle C, Title 7, Transportation Code"?? I used a couple different sites search functions and none of them found this particular bit in Texas State Transportation Code. Where should I look to find this specifically? Laws are a strange beast. To change an alternator you don't need to know how it works. But to understand one sentence of any legal codes you often times need to understand much more of the code and even some that don't seem related. I just don't see how this supports your side of the discussion because I have been unable to locate the relevant complimentary documents.

My only experience with Uniden is with the 520XL. Cheep, basic, CB radio. Serves me fairly well in my Jeep, but my needs are minimal. Reception is good compared to other CB's I've owned and so is transmission. I really think your particular needs and the model in question would make this an easier question to answer.

Hi Mark.

I missed the original, as I have Georgina blocked.
In the UK, not only do CBers warn each other, but some drivers will flash their lights to oncoming traffic to warn that there is a speed trap ahead. With mobile telephones also being used by so many drivers, it is not long before everyone is aware of the trap.
The police were once asked what their position is on this and they said that they were pleased. Their aim is to slow down traffic to within the limit and that is what was happening, for several hours after they move on to another area.

They are now getting more of the cameras fitted as that frees up officers for other work. Everyone knows where the cameras are, but they still catch some people speeding. The money obtained from fines will be used to pay for more cameras.

Regards,

Peter.

==

There must be some great ways to wind them up when you know one is listening. Police listening to CB never caught on over here. It is possible that they would not have been allowed to fit them in their cars, but there would not have been enough to gain from it anyway. The most you get from the truckers is foul language and reports of the women in cars... every female driver is playing with herself and they all do it just to please the truck dirvers, or so they think.

CB is so quiet over here now, even from my perch on this hill, I hear very little now. There is talk of sales picking up in one of the main UK CB shops, but I doubt if it will be as it was in the 80s.
Now and then a CB will appear on a "car boot" sale stall, but I do wonder where all the rest are and how many of the old CBers still have their equipment in a cupboard somewhere.

Regards,

Peter.

> > always cause inteference.
>
> Does that make it any less illegal?
==

I Never said it did, I was just stating a couple of facts. People need
to be aware that running a legal setup does not guarantee that you
will not intefere.
Such ideas lead to legal CBers being unwilling to even consider
sorting out inteference problems as it cannot be their system at
fault... or so they think.

Just like you are unwilling to debate without resorting to insults in
the subject header, because someone states facts that do not suit
you. You may call it "acting like a single celled amoeba", I call it
thinking for myself... something your mob do not like people doing.
You would like us to believe that all electronic equipment knows the
law and will get inteference as soon as a radio is operated illegally...
but not while it is operated legally.

Regards,

Brainbuster.

I just spent more hours than I care to admit doing a google search on
the subject of "headlight flashing".

I was able to find a few of the "it is illegal" or "I know someone who has
a friend that received a citation" type posts. The problem is that none
of them provided any verifiable detail - so they must be relegated to
the "urban myth" category.

I managed to find ONE cite about an actual court case. It was in
Pennsylvania State Superior Court. The conviction of the defendant was
affirmed by the Court - on a 2 to 1 vote. The defendant stated that he
would appeal to the State Supreme Court. I did not find any information
on the results of that appeal.

The charge? Illegal use of high beams. On the other hand, I don't
recall that it had anything to do with speed traps.

If I decide to waste more time, I may research this further.

2515. help with transmit problems on old cb radio!!!

Newsgroup: rec.radio.cb
Date: 2002-07-27 08:43:35 UTC
From: agoodridge@bigpond.com.au
Message-ID: <6d8faad.0207270043.40f37c19@posting.google.com>
Source record: 131539

Hello from Australia

Can anyone give me some advice regarding an old radio. The radio is an e.f johnson viking am/ssb radio. It is a 4740 model but is the same as the viking 352D and messenger 4730.

The problem is this: I just got the radio last week off a similar thing to e bay in Australia. The guy said it was all ok but when I got it home it was transmitting very little power on a.m. (about 1/2 watt) and when the mike was keyed the power went up very slowly. It was transmitting on sideband, about 10 watts but was off frequency and I fixed that up o.k. The a.m modulation was awful, like f.m listened to with an a.m. receiver.

Anyway next day hooked her up again and was putting out about 25 watts on sideband seemed o.k. a.m was still bad.

Next day hooked it up and was transmitting nothing at all on sideband but a carrier (similar to a.m) that came through on a.m. in a nearby radio.

Now it is not transmitting anything!

It recieves fine.

Any ideas would be much appreciated.

I have the sams for the radio, just give me some idea where to start looking. I thought maybe cold solder joints or something.

Anyway thanks

Max 351 Australia

>
>I Never said it did, I was just stating a couple of facts.

You? Stating facts? LOL! Ok, let's see what "facts" you are
proclaiming this time:

: People need
>to be aware that running a legal setup does not guarantee that you
>will not intefere.

No, but it does tend to improve the odds a bit. Quite a bit.

>Such ideas lead to legal CBers being unwilling to even consider
>sorting out inteference problems as it cannot be their system at
>fault... or so they think.

Like who? Name one legal CBer that thinks just because he is running
legally that he can't be causing interference? Or was that just one of
your "facts"?

>Just like you are unwilling to debate without resorting to insults in
>the subject header, because someone states facts that do not suit
>you. You may call it "acting like a single celled amoeba", I call it
>thinking for myself... something your mob do not like people doing.

You sure as hell weren't thinking for yourself when you tried to
educate me about skin effect! I noticed you didn't respond to that
post -- you are probably busy shuffling frantically through the pages
of every book you can find right about now...hehe!

>You would like us to believe that all electronic equipment knows the
>law and will get inteference as soon as a radio is operated illegally...
>but not while it is operated legally.

...hmmm, are you studying some sort of animism-like philosophy? Where did anyone say that an inanimate object such as a radio can 'know' anything? Really, where did that come from, brain? Have you been spending so much time on the computer that you actually think it has a personality? Have you been talking to the walls lately? Or have you been eating some of that funny beef? Taking any illicit drugs?

Max,
1. Replace all 'paper' capacitors.
2. Check/replace tubes or transistors.
3. Clean/replace relays.
4. Check/evaluate/repair any modifications.

That shuold keep you busy for a while.

Well, if you have the Sams your life should be a tad easier. Sams
generally had voltage charts. Were it mine, I would do the following:

Phase I:
1. Clean every switch and pot but be careful not to readjust anything.
And don't blow the cleaner down things like coils and i.f. cans. DeOxit
if you can get it.

2. Do a visual looking for things that are blackened, paper caps with the ends blown out, things that are loose, and wherever something comes or goes out of the unit - mike jacks, antenna jacks, etc. particularly if the center pin is loose on the coax fitting from being reefed with a 259 and a solder glop.

3. Pull the tubes one by one and hit the sockets with the cleaner looking for cracks. Omit this step if you have a transistorized unit.

Phase II

Check out the Power Supply, caps etc. using the schematic.

Phase III:

1. Use the voltage charts or find a pro.

I have the following for sale.
Cobra 148 gtl, phillipines model, peaked, swing kit, channels, 9 out
of 10. $90
Cobra 29 ltd, peaked, big final, nice shape. $65
Ranger 2950, converted, swing kit, 8 out of 10, does 50 watts. $125
Ranger 2970, converted, swing kit, 8 out of 10, does 250 watts. $225
Galaxy DX88, converted, peaked, 10 out of 10. $175
Galaxy DX99v, converted, peaked, 9.5 out of 10. $200
Texas Star dx350 $125
Texas Star dx 667 $225
Texas Star dx1600 $500 add $75 for fan kit
Heathkit SB-220, tubes have about 20 hours on them, wired for 220,
does 2K, 7.5 out of 10, not all beat up. $500

All radios come with stock mic, power cord and bracket.
All items are shipped postal priority mail.
All prices INCLUDE shipping.
I ONLY accept paypal, no c.o.d. or money orders.

Email me with any question, I may be able to come up with something
you need if asked.

True, and it's not an excuse to run illegally.

> Such ideas lead to legal CBers being unwilling to even consider
> sorting out inteference problems as it cannot be their system at
> fault... or so they think.

All the more reason NOT to run illegally. If a LEGAL CB rig can
interfere, adding a "kicker" or operating "out of band" can only make
things WORSE, don't you agree?

>
> Just like you are unwilling to debate without resorting to insults in
> the subject header, because someone states facts that do not suit

I believe that within your first few posts to me you resorted to an
insulting header. Now you want what you started to stop. What a big
baby you turned out to be.

> You may call it "acting like a single celled amoeba", I call it
> thinking for myself... something your mob do not like people doing.

My "mob" (?) wants to stop people thinking for themselves? Now I've
heard it all.

> You would like us to believe that all electronic equipment knows the
> law and will get inteference as soon as a radio is operated illegally...
> but not while it is operated legally.

I said or implied nothing of the sort. As Sparky said, that would be animism.

I hate to say it, but it sounds like some Screwdriver King tried to
"mod" the radio to obtain maximum (illegal) power and "swang" effect.
Great way to burn up a radio and make it useless.

<Followups Set to rec.radio.cb>.

Whats wrong with that? Citizens make fun of public servants all the time!

Besides, seems to me that the judges probably get to see more examples
of outright luser behaviour the almost any other profession, with the
possible exceptions of traffic police and A&E doctors.

If the guy in front of the bench is behaving like a tosser the judge
should be alowed to say so!

Regards, Dan.

2540. CB endorsed by PennDOT

Newsgroup: rec.radio.cb
Date: 2002-07-28 03:08:30 UTC
From: Kenneth <pwrguy@intergrafix.net>
Message-ID: <uk6o1f98e5a21a@corp.supernews.com>
Source record: 131568

WHat does this mean? Lately PennDOT has been setting up transmitters with an automatic message usually with travel advisories. Basically along the lines of "constuction at exits 55 to 57 along rt 283 slow down, slow down NOW". This is always on ch19 and seems to be replacing the old system of advisories on 530am or 1640am.
While not an ACTUAL endorsement it is recognition by a state government that CB ch19 is the de-facto medium for travel and IMHO constitutes an official recognition by spending money for auto-transmitters. CB is hear to stay.
Also I'd bet dollars to donuts there not 4 watt units. These advisories blanket a large area and step on everybody.
What does this mean for cb? These warnings are not on FMS or MURS or any Ham bands. CB is hear to stay.

I agree with the judge on this one. As a matter of fact,
it's a darn good thing stupidity isn't a crime in the U.S.A.!!

It's just like Gallagher said "they aught to let people have
little dart guns and when ever they see somebody driving
like an idiot they shoot the car with the dart. That way
whenever the cops see someone with a lot of darts on
their car they stop them and give em a ticket for being
stupid."

Illegal for use on CB.

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
sell or lease, offer for sale or lease (including advertising for sale
or lease), or import, ship, or distribute for the purpose of selling
or leasing or offering for sale or lease, any external radio frequency
amplifier or amplifier kit capable of operation on any frequency or

frequencies between 24 and 35 MHz.

Federal Communications Commission (FCC)

Part 95 - Subpart D - Rules for CB Service
Citizens Band (CB) Radio Service

General Provisions-

[RULE 1] Description
[RULE 2] Usage of Rules
[RULE 3] Who is Eligible
[RULE 4] Licenses
[RULE 5] Areas Of Legal Operation
[RULE 6] Special Restrictions
[RULE 7] Operating Channels/Frequencies
[RULE 8] Antenna Height
[RULE 9] Equipment
[RULE 10] Power Output
[RULE 11] Linear Amplifiers
[RULE 12] Permitted Communication
[RULE 13] Illegal Communication
[RULE 14] Paying for Actual Use
[RULE 15] Who Is Held Accountable
[RULE 16] Time Limit of Transmissions
[RULE 17] Identification Methods
[RULE 18] Emergency Usage and Assisting Travelers
[RULE 19] Remote Control Operations
[RULE 20] Telephone Patches and Telephony with CB
[RULE 21] Penalties
[RULE 22] Correspondence from FCC
[RULE 23] Notice of Interference
[RULE 24] Service to Transmitters and Antennas
[RULE 25] Modifications to Transmitters
[RULE 26] FCC Inspections
[RULE 27] Keeping Station Records
[RULE 28] Contacting the FCC

RULE 1 - Descriptions The Citizens Band Radio Service (CB) is a private, two-way, short-distance voice communications service for personal or business activities. The CB Radio Service may also be used for voice paging.
RULE 2 - Usage of Rules You must comply with these rules when you operate a station in the CB Service from:
{1} Within or over the territorial limits of places where radio services are regulated by the FCC.
{2} Aboard any vessel or aircraft registered in the United States or
{3} Aboard any unregistered vessel or aircraft owned or operated by a United States citizen or company.
Your CB must comply with Part 95/Subpart E [Technical Rules].
Where the rules use the word "you", "you" means a person operating a CB station. Where the rules use the word "person" the rules are

concerned with an individual, a corporation, a partnership, an association, a joint stock company, a trust, a state, territorial or local government unit, or other legal entity. Where the rules use the term "CB station", that means a radio station transmitting in the CB Radio Service.
RULE 3 - Eligibility To Use CB You are authorized to operate a CB station unless:
{A} You are a foreign government, a representative of a foreign government, or a federal government agency.
or
{B} The FCC has issued a cease and desist order to you, and the order is still in effect.
RULE 4 - Licenses You do not need an individual license to operate a CB station. You are authorized by this rule to operate your CB station in accordance with the rules stated in this Subpart. (*also read Rule 17)
RULE 5 - Areas of Legal Operation You are authorized to operate your CB station from:
{A} Within or over any area of the world where radio services are regulated by the FCC. Those areas are:
[1] The 50 United States
[2] The District Of Columbia
[3] Commonwealth of Puerto Rico
[4] Navassa Island
[5] United States Virgin Islands, it's 50 islets and cays
[6] American Samoa
[7] Baker Island
[8] Commonwealth of Northern Mariana Islands
[9] Guam Island
[10] Howland Island
[11] Jarvis Islan
[12] Johnston Island
[13] Kingman Reef
[14] Midway Island
[15] Palmyra Island, and it's 50+ islets
[16] Wake Island
{B} Any area of the world, except, within the territorial limits of areas where radio services are regulated by -
[1] An agency of the United States other than the FCC, you are subject to it's rules.
[2] Any foreign government, you are subject to it's rules.
{C} An aircraft or ship, with the permission of the captain, within or over any area of the world where radio services are regulated by the FCC or upon or over international waters. You must operate your CB station according to any applicable treaty to which the United States is a party.
RULE 6 - Special Restrictions
{A} If your CB station is located on premises controlled by the Department of Defense you may be required to comply with additional regulations imposed by the commanding officer of the installation.

{B} If your CB station will be constructed on land of environmental or historical importance (such as a location significant in American history, architecture or culture), you may be required to provide information to comply with Part 1.1305 through 1.1319 of the FCC Rules.
RULE 7 - Operating Channels/Frequencies Your CB station may transmit only on the following channels / frequencies:

Channel	Frequency	Channel	Frequency
1	26.965	21	27.215
2	26.975	22	27.225
3	26.985	23	27.255
4	27.005	24	27.235
5	27.015	25	27.245
6	27.025	26	27.265
7	27.035	27	27.275
8	27.055	28	27.285
9*	27.065	29	27.295
10	27.075	30	27.305
11	27.085	31	27.315
12	27.105	32	27.325
13	27.115	33	27.335
14	27.125	34	27.345
15	27.135	35	27.355
16	27.155	36	27.365
17	27.165	37	27.375
18	27.175	38	27.385
19	27.185	39	27.395
20	27.205	40	27.405

{B} * Channel 9 may be used ONLY for emergency communications OR for traveler assistance.
{C} You must, at all times and on ALL channels, give priority to emergency communication messages concerning the immediate safety of life or the immediate protection of property.
{D} You may use ANY channel for emergency communications or for traveler assistance.
{E} You must share each channel with other users.
{F} The FCC will not assign any channel for the private or exclusive use of any particular CB station or group of stations.
{G} The FCC will not assign any channel for the private or exclusive use of CB stations transmitting single sideband or AM.
RULE 8 - Antenna Height
{A} "Antenna" means the radiating system (for transmitting, receiving or both) and the structure holding it up (tower, pole or mast). It also means everything else attached to the radiating system and the structure.
{B} If your antenna is mounted on a hand-held portable unit, none of the following limitations apply;
{C} If your antenna is installed at a fixed location (whether receiving, transmitting or both) it must comply with EITHER one of the

following:
[1] The highest point must not be more than 20 feet (6.10 meters) higher than the highest point of the building or tree on which it is mounted;
or
[2] The highest point must not be more than 60 feet (18.3 meters) above the ground.
{D} If your CB station is located near an airport, and if your antenna structure is more than 20 feet (6.10 meters) high, you may have to obey additional restrictions. The highest point of your antenna must not exceed 39.37 inches (1 meter) above the airport elevation for every 109.36 yards (100 meters, 1 hectometer) of distance from the nearest point of the nearest airport runway. Differences in ground elevation between your antenna and the airport runway may complicate this formula. If your CB station is near an airport, you may contact the nearest FCC field office for a worksheet to help you figure the maximum allowable height for your antenna.
WARNING: Installation and removal of CB station antennas near powerlines is dangerous. For your safety follow the installation directions included with your antenna.
RULE 9 - Equipment
{A} You must use an FCC type accepted CB transmitter at your CB station. You can identify an FCC type accepted transmitter by the 'type acceptance'label placed on it by the manufacturer. You may examine a list of type-accepted equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter which is not FCC type-accepted voids your authority to operate the station.
{B} You must not make, or have made, any internal modifications to a type-accepted CB transmitter. (*read Rule 25) Any internal modification to a type-accepted CB transmitter cancels the type-acceptance, and use of such a transmitter voids your authority to operate the station.
RULE 10 - Power Output
{A} Your CB station transmitter power output must not exceed the following values under any conditions:
AM [Amplitude Modulation] - 4 watts carrier power [CP]
SSB [Single Side-Band] - 12 watts peak envelope power [PEP]
{B} If you need more information about the power rule, see Part 95/ Subpart E.
{C} Use of a transmitter which has carrier [CP] or peak envelope power [PEP]in excess of that authorized voids your authority to operate the station.
RULE 11 - Linear Amplifiers
{A} You may not attach the following items (power amplifiers) to your type-accepted CB transmitter in any way:
[1] External radio frequency [RF] power amplifiers, also called linear amplifiers, or linears;
or
[2] Any other devices which, when used with a radio transmitter as a signal source, are capable of amplifying the signal.

{B} There are no exceptions to this rule and use of a power amplifier voids your authority to operate the station.
{C} The FCC will presume you have used a linear or other external [RF] power amplifier if-
[1] It is in your possession or on your premises; and
[2] There is OTHER EVIDENCE that you have operated your CB station with more power than allowed by CB Rule 10.
{D} Paragraph C above in this section does not apply if you hold a license in another radio service (HAM, etc.) which allows you to operate an external RF power amplifier.
RULE 12 - Permitted Communications {A} You may use your CB station to transmit two-way plain language communications. Two-way plain language communications are communications without codes or coded messages. Operating signals such as "ten codes" (10-4, etc.) are not considered codes or coded messages. You may transmit two-way plain language communications only to other CB stations, to units of your own CB station, or to authorized government stations on CB frequencies about-
[1] Your personal or business activities, or those of members of your immediate family living in your household;
[2] Emergencies;
[3] Traveler assistance;
[4] Civil Defense activities in connection with official tests or drills conducted by, or actual emergencies announced by, the Civil Defense Agency with authority over the area in which your station is located.
{B} You may use your CB station to transmit a TONE SIGNAL only when the signal is used to make contact, or to continue communications (Examples: tone operated squelch, selective calling circuits). If the signal is an audible tone, it must last no longer than 15 seconds at one time. If the signal is a subaudible tone, it may be transmitted continuously only as long as you are talking.
{C} You may use your CB station to transmit one-way communications (messages not intended for two or more CB stations) only for emergency communications, traveler assistance, brief tests (radio checks) or voice paging.
RULE 13 - Illegal Communications {A} You must NOT use a CB station-
[1] in connection with activity which is against federal, state or local law;
[2] to transmit obscene, indecent or profane words, language or meaning;
[3] to interfere intentionally with the communications of another CB station;
[4] to transmit one-way communications, EXCEPT for emergency communications, traveler assistance, brief tests (radio checks) or voice paging;
[5] to advertise or solicit the sale of any goods or services;
[6] to transmit music, whistling, sound effects or any material to amuse or entertain;
[7] to transmit any sound effect solely to attract attention;
[8] to transmit the word "MAYDAY" or use any other international

distress signal, EXCEPT when your station is located in a ship, aircraft or other vehicle which is threatened with GRAVE AND IMMINENT danger and you are requesting IMMEDIATE assistance.
[9] to communicate with, or ATTEMPT to communicate with, any CB station more than 155.3 miles (250 kilometers) away;
[10] to advertise a political candidate or political campaign (You may use your CB radio for the business or organizational aspects of a campaign, if you follow all other applicable rules);
[11] to communicate with stations in other countries, except stations in Canada (on General Radio Service).
[12] to transmit a false or deceptive communication.
{B} You must not use a CB station to transmit communications intended for live or delayed rebroadcast on radio or television. You may use your CB station to gather news items or to prepare programs.
RULE 14 - Paying for Actual Use {A} You may not accept direct or indirect payment for transmitting with a CB station.
{B} You may use a CB station to help you provide a service, and be paid for that service, as long as you are paid only for the service and not for the actual use of the CB station.
RULE 15 - Who Is Held Accountable You are responsible for all communications which are made BY YOU from a CB station.
RULE 16 - Time Limit of Transmissions {A} You must limit your CB communications to the minimum practical time.
{B} If you are communicating with another CB station or stations, you, and the stations communicating with you, must limit each of your conversations to no more than five (5) continuous minutes.
{C} At the end of your conversation, you, and the stations communicating with you, must not transmit again for at least one minute.
RULE 17 - Identification Methods {A} You need NOT identify your CB communications...
{B} You are ENCOURAGED to identify your CB communications by any of the following means:
[1] Previously assigned FCC CB call sign
[2] K prefix followed by operators initials and residence zip code
[3] Your name;
or
[4] Description of your organization including name and any applicable operator unit number
{C} You are encouraged to use a "handle" (nickname) ONLY IN CONJUNCTION WITH the methods of identification listed above in paragraph B of this section.
RULE 18 - Emergency Usage and Assisting Travelers {A} You must at all times and on all channels, give priority to emergency communications.
{B} When you are directly participating in emergency communications, you do not have to comply with Rule 16 about length of transmissions. You must obey all other rules.
{C} You may use your CB station for communications necessary to assist a traveler to REACH A DESTINATION or to RECEIVE NECESSARY SERVICES. When you are using your CB station to assist a traveler, you do not

have to obey Rule 16 about the length of transmissions. You must obey all other rules.
RULE 19 - Remote Control Operations {A} You MAY NOT operate a CB station transmitter by RADIO remote control.
{B} You MAY operate a CB transmitter by WIRELINE remote control IF you obtain specific approval in writing from the FCC. To obtain FCC approval you must show why you need to operate your station by wireline remote control. Send your request and justification to: FCC, Gettysburg, PA 17325.
If you receive FCC approval, you must keep the approval as part of your station records (read Rule 27 on station records).
RULE 20 - Telephone Patches and Telephony with CB {A} You MAY connect your CB station transmitter to a telephone if you comply with ALL of the following:
[1] You or someone else must be present at your CB station and MUST-
(i) manually make the connection (the connection cannot be made by remote control);
(ii) supervise the operation of the transmitter during the connection;
(iii) listen to each communication during the connection; and
(iv) stop all communications if there are operations in violation of these rules.
[2] Each communication during the telephone connection must comply with all of these rules.
[3] You must obey any restriction that the telephone company places on the connection of a CB transmitter to a telephone.
{B} The CB transmitter you connect to a telephone must not be shared with any other CB station.
{C} If you connect your CB transmitter to a telephone, you must use a phone patch device which has been registered with the FCC.
RULE 21 - Penalties may not be current penalty information. {A} If the FCC finds that you have WILLFULLY or REPEATEDLY violated the Communications Act or FCC Rules, you may have to pay as much as $2,000 for each violation, up to a total of $5,000.
{B} If the FCC finds that you have violated any section of the Communications Act or FCC Rules, you may be ordered to stop whatever action caused the violation.
{C} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any FCC Rule, you may be fined up to $500 for each day you committed the violation.
{D} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any provision of the Communications Act, you may be fined up to $10,000 or may be imprisoned for one year, or both.
RULE 22 - Correspondence from FCC {A} If it appears to the FCC that you have violated the Communications Act or these rules, the FCC may send you a discrepancy notice.
{B} Within the time period stated in the notice, you must answer with:
[1] A complete written statement about the apparent discrepancy;
[2] A complete written statement about any action you have taken to correct the apparent violation and to prevent it from happening again; and

[3] The name of the person operating at the time of the apparent violation.
{C} If the FCC sends you a letter asking you questions about your CB radio station or its operation, you must answer each of the questions with a complete written statement within the time period stated in the letter.
{D} You must not shorten your answer by references to other communications or notices.
{E} You must send your answer to the FCC office which sent you the notice.
{F} You must keep a copy of your answer in your station records.
RULE 23 - Notice of Interference {A} If the FCC tells you that your CB station is causing interference due to technical reasons, you must follow all instructions in the official FCC notice (This notice may require you to have technical adjustments made to your equipment).
{B} You must comply with any restricted hours of CB station operation which may be included in the official notice.

RULE 24 - Service to Transmitters and Antennas {A} You may adjust an antenna to your CB transmitter and you may make radio checks (One-way transmissions for a short time in order to test the transmitter).
{B} Each internal repair and each internal adjustment to your FCC type-accepted CB transmitter must be made BY or under the DIRECT SUPERVISION of a person licensed by the FCC as a GENERAL RADIOTELEPHONE OPERATOR.
{C} Except as provided in paragraph D below in this section, each internal repair and each internal adjustment of a CB transmitter in which signals are transmitted must be made using a NON-RADIATING antenna (Dummy Load).
{D} Brief test signals (signals not longer than one minute during any five minute period) using a radiating antenna may be transmitted in order to:
[1] adjust an antenna to a transmitter;
[2] detect or measure radiation of energy other than the intended signal;
or
[3] tune a receiver to your CB transmitter.
RULE 25 - Modifications to Transmitters {A} You must not make or have any one else make any internal modification to your CB transmitter.
{B} Internal modification does NOT include:
[1] Repair, or servicing of a CB station transmitter; or
[2] Changing plug-in modules which were type-accepted as part of your CB transmitter
{C} You must not operate a CB transmitter which has been modified by anyone in any way, including modification to operate on unauthorized frequencies or with illegal power.
RULE 26 - FCC Inspections {A} If an authorized FCC representative requests to inspect your CB station, you must make your CB station and records available for inspection.
{B} A CB station includes all of the radio equipment you use.

RULE 27 - Keeping Station Records Your station records include the following documents, as applicable: [1] A copy of each response to an FCC violation notice or an FCC letter.
[2] Each written permission received from the FCC.
RULE 28 - Contacting the FCC {A} Write to your nearest FCC Field Office to: [1] Report an interference complaint; or [2] want to know if the FCC has type-accepted a particular transmitter for CB service.
{B} Write to the FCC if you have questions about the CB Rules: FCC Private Radio Bureau Personal Radio Branch Washington, DC 20554

Yes, poor Peter, always watching his words. It must be horrible having to carefully compose your posts so they manage to express encouragement of illegal CB without actually appearing to do so. And to think, all you have to do is be honest and law abiding and things would be so much simpler.

Kenneth,

What would you do if the FCC actually caught you in the act and you had to face an ALJ in a hearing at FCC headquarters in Washington, D.C.? Furthermore, would you have the money to get to Washington and be able to defend yourself on whatever actions the FCC was taking against you???

Amateur Radio Newsline™ Report 1302 July 26th, 2002

Amateur Radio Newsline report number 1302 with a release date of
Friday, July 26th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A giant solar flare causes problems on the High Frequency bands and a popular ARRL Director calls it quits. These stories are first on Amateur Radio Newsline report number 1302 coming your way right now.

(Billboard Cart Here)

**

PROPAGATION: X CLASS SOLAR FLARE CLOSES HF BANDS

If you have been wondering where all the signals you normally hear on the High Frequency bands have gone, we have the answer. A large flare on the Sun effectively closed them down. Amateur Radio Newsline's Don Wilbanks tells us about the solar eruption and what it could mean for ham radio:

--

Solar flares come in all sizes, and the Astro Alert service says the latest ones are some of the largest. The E-newsletter says that the sunspot complex believed to be responsible for a July 21st X Class flare rotated fully into Earth's view on July 22nd. It announced its arrival by spawning a second and spectacularly powerful X Class 4.8 level eruption.

Solar Alert says that this latest flaring region has the potential to produce substantial effects on Earth over the next two weeks and we could see more than we have in the last 10 years. It all depends on whether or not the sunspot complex continues to pump out activity at the same rate that it is presumed to have produced over the last several days.

For radio hobbyists it means that there could be very little to hear on the bands from 1.8 to 30 MHz for a while. And, depending on the level of atmospheric ionization that takes place, it also could bring some unexpected long distance communications to 6 meters and above. If you have weak signal gear for the world above 50 MHz, keep and ear on frequencies like 50.110 and 50.125 MHz and be prepared to hear -- and to work -- the unexpected.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, in New Orleans.

--

More on this story is in the Solar Alert URL at
http://www.spacew.com/astroalert.html. (WDX6AA)

**

HAM RADIO POLITICS: ARRL BOARD MEETS IN CONNECTICUT

The American Radio Relay League has held its 2nd meeting of 2002. It took place July 19th to the 20th in Windsor, Connecticut. Amateur Radio Newsline’s Cathy Anno, KB0FDU, has the details:

--
Perhaps the biggest news came as the Board Meeting was getting ready to begin. Thats when the American Radio Relay League was named to receive a $181,900 homeland security grant from the U-S government to train Amateur Radio operators in emergency communication. The A-R-R-L was among several dozen nonprofit organizations designated to receive upward of $10.3 million in federal money to boost homeland defense volunteer programs. The grant, from the Corporation for National and Community Service Special Volunteer program, will provide free ARRL Amateur Radio Emergency Communications Course training to 5200 volunteers nationwide, starting in 2003.

According to the ARRL South-Eastern Division E-letter, one issue that garnered a lot of conversation was the plan to remove the Section News columns in QST to the ARRL web-site. This proposal was presented last January but a decision was deferred for six months. Now the Leagues Directors, by a 9-6 vote, decided to approve the change.

Starting with the January 2003 issue of QST, columns from the 71 Section Managers will be moved to the web-site. ARRL staff will make provisions for those without web access, to have access to their own Section Managers column. The Board also voted to move the contest line scores out of QST and post them on the web as well.

ARRL's Development Director Mary Hobart, N1MMH, presented a new creative method of increasing member awareness. Soon, ARRL members will be asked to participate in a premium membership program. Various levels of membership will be created, like Diamond Club and Maxim Society. The higher level of participation the better the premium benefit received. Details on this program will be announced soon.

The board named Sherri Brower, W4STB, Vero Beach, Florida, as winner of the McGan Memorial Silver Antennas Award for Public Relations. Bower, who becomes Section Manager of South Florida on October 1st, was cited for her long-term commitment and dedication to present all aspects of amateur radio to the public. ARRL South Eastern Division Director Frank Butler, W4RH, will present the award to Bower at the Melbourne Hamfest in Melbourne Florida on September 14.

For the Amateur Radio Newsline, I’m Cathy Anno, KB0FDU.

--

For full coverage of the ARRL Board meeting take your web browser over to www.arrl.org. (ARRL S.E. Division E-Letter)

**

HAM RADIO POLITICS: WB8BGY RESIGNS AS GREAT LAKES ARRL DIRECTOR

And a big surprise happened Saturday July 20th during the ARRL Board of Directors meeting on. That’s where Great Lakes Division Director George Race, WB8BGY, of Albion, Michigan, unexpectedly tendered his resignation. Amateur Radio Newsline’s Fred Vobbe, W8HDU reports:

--

George Race, WB8BGY, who is 66, has served on the ARRL Board of Directors for 12 years. Prior to that, he held numerous other field organization positions including several terms as Michigan Section Manager. Race is legendary within the ARRL field organization for his travels around the Great Lakes Division. Each year he has spenr btween 45,000 to 50,000 on the road on the League's behalf and has literally worn out three cars in the process.

Race admits that a Board vote to move ''Section News'' from QST magazine to the World Wide Web did play a small part in his decision to resign, it was not the primary factor. Rather it was time. Time to devote to his wife and family. WB8BGY sayd that there is life beyond the League.

Accolades for Race were quick in coming. One of the first was from ARRL President Emiritus George Wilson, W4OYI. He told Amateur Radio Newsline that George Race devoted decades to furthering the cause of both ham radio and the League. Wilson called Race a tireless worker on behalf of the hobby adding that he definately will be missed.

Reporting from the ARRL’s Great Lakes Division, I’m Fred Vobbe, W8HDU.

--

By normal succession of officers, Great Lakes Vice Director Gary Johnston, KI4LA, was declared the new director. ARRL President Jim Haynie, W5JBP, has appointed Michigan Section Manager Dick Mondro, W8FQT, to be the new Great Lakes Vice Director. A successor to Mondro as Michigan Section Manager is expected to be named soon. (Adapted from ARRL Bulletin, W4OYI)

RADIO LAW: CQ SAYS YES TO NEW HAM BANDS

The publisher of several hobby radio magazines is urging the FCCto proceed in the creation of several new ham bands. However, it is voicing significant concern that the regulatory agency appears to be placing the interests of unlicensed services on a par with, if not ahead of, those of licensed services. Amateur Radio Newsline’s David Black, KB4KCH, tellks us who filed and why:

--

Most magazine publishers traditionally stay out ham radio politics. But the people who publish CQ Amateur Radio, CQ VHF and Popular Communications magazines are making an exception this time.

The publishers have filed comments with the FCC strongly supporting proposals that would create two new amateur bands and elevate a current amateur allocation from secondary to primary status.

CQ wants the FCC to adopt a proposal to create a "splinter band" at 135.7 to 137.8 kHz -- this would give amateur radio its first allocation above 200 meters in nearly a century. The company proposes opening the band to all amateurs with General Class or higher licenses, not imposing mode restrictions and making technical requirements flexible enough to encourage a wide range of experimentation.

CQ is also pushing for creation of a new ham band at 60 meters from 5.250 to 5.400 Mhz. The proposal suggests that full amateur power be permitted; that there be no sub-banding, either by mode or by license class; and that the band be open to all amateurs with HF privileges. That would include CW privileges for hams holding Novice Class licenses or Technician licenses with code credit.

Finally, CQ voices strong support for the FCC's proposal to make the Amateur Service primary on 2400 to 2402 MHz. The publishers say they're very concerned about one Commission request in its Notice of Proposed Rule Making. That requests solicits comments on the change in status that might affect non-licensed users of this band, such as cordless telephones and wireless computer networks.

CQ wants the Commission to reaffirm its long-standing policy that the interests of licensed operators and services are primary on any frequencies shared by licensed and non-licensed users.

For the Amateur Radio Newsline, Im David Black, KB4KCH.

--

CQ's comments were filed electronically and may be viewed in full on the FCC's Electronic Comment Filing System website at www.fcc.gov/e-file/ecfs.html by selecting "Search for Filed Comments," then typing in "02-98" under "Proceeding" on the search page, scrolling through comment summaries until the CQ comments are reached. (CQ)

**

RADIO LAW: COMMISSION REQUIRES RADAR DETECTORS TO COMPLY WITH EMISSION LIMITS

The FCC has imposed new emission limits and certification requirements on radar detectors. This, to prevent them from causing interference to very small aperture satellite terminals that operate with downlink frequencies in the 11.7 to 12.2 GHz band. Tests at the Commission's Laboratory have shown that some radar detectors emit radio signals in the downlink band far in excess of the limits that apply to other unintentional radiators. As a result of the new standards, radar detectors sold in the United States will have to meet the new and more stringent limits. The complete document is at

http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-224518A1.doc (CGC Communicator)

**

RADIO LAW: VOTE ON NEW FCC COMMISSIONER EXPECTED

Ending months of political bickering over judicial nominations, a senate panel approved a longtime aide to Senate Majority Leader Tom Daschle for a seat on the Federal Communications Commission. The nomination of Jonathan S. Adelstein, who has worked for the Democratic leader since 1995, will go to the full Senate for a vote.

Approval is expected, with several Republican senators saying they would vote for the South Dakota native. The FCC panel has five commissioners, who are nominated by the president and confirmed by the Senate. Only three can be from the same political party. (Congressional Review)

**

ENFORCEMENT: WISCONSIN HAM ASKED ABOUT CB SALES

The FCC has asked a Wisconsin ham to explain his connection to a website that purportedly offers for sale C-B equipment not certified by the agency. The FCC’s Riley Hollingsworth explains:

--
Hollingsworth: “We opened an inquirey regarding the marketing of non certified radio equipment including non certified CB transceivers and HF linear amplifiers by Roper Electronics. Roper Electronics has a web page entitled tomah.com, and we are inquiring into the relationship between Roper Electronics and Randi Owen, N9UOM, of Tomah Wisconsin.”
--

Specifically, Owen was asked to fully describe his relationship, if any, with Roper Electronics. Also, if it turns out that he owns or is affiliated with Roper, he was requested to furnish the FCC a listing of all models of HF transceivers and amplifiers domestically sold and/or offered for sale by Roper since January 1st of this year. That list must include the FCC certification number for each model.

The letter of inquiry went out to Owen on June 18th. Hollingsworth says that a reply to that inquiry is do in right now. (FCC, RAIN)

**

HAM SCHOLARSHIPS: FAR SCHOLARSHIP WINNERS ANNOUNCED

The Foundation For amateur Radio has announced this year’s winners for the fifty-seven scholarships which it administers. The names of the recipients for the individual awards appear on a list at several websites including the ARRL. For more information, write FAR Scholarships, PO Box 831, Riverdale, Maryland, 20783. The announcement for the year 2003 awards availability will be made early next year. (FAR)

**

UPCOMING EVENTS: PACKARD AUTOMOBILE CELEBRATION

On the special events calendar, the Warren Ohio Amateur Radio Association will be operating special events station W8P to commemorate the annual Packard automobile celebration and car show. The Warren group will operate on the 40, 20, 15 and 10 meter bands. QSL's go to the Warren Amateur Radio Association, Post Office Box 809, Warren Ohio. The Zipcode there is 44482 (Via Internet Posting)

**

UPCOMING EVENTS: OH-KY-IN HAMFEST

Still in Ohio, but over in Cincinnati, the OH-KY-IN Amateur Radio Society will be holding its annual hamfest on July 27th. The venue is the Diamond Oaks Career Development Campus and this event features seminars, hidden transmitter hunts and a giant flea market. More information on this one is on the web at www dot ohkyin dot org. And in case you are wondering what OH-KY-IN stands for – its Ohio, Kentucky and Indiana – the three states that provide most of the attendees to this annual event. (Via E-Mail)

**

UPCOMING EVENTS: NATIONAL BABY FOOD FESTIVAL

From one of our listeners in Michigan comes word that W1B is a special event operation from the National Baby Food Festival. Yes, there really is a National Baby Food Festival and W1B will operate the General class areas of 75, 40, 20, 15 and 10 meters while its underway. And if you work this one, you QSL with a self addressed stamped envelope to Shawn Gibson, KC8LGD, 3377 West 80th Street in Newaygo Michigan. Gibson’s zipcode is 49337. (Via Internet Posting)

HAM RADIO IN SPACE: RUSSIA SAYS BASS LIKELY TO FLY TO ISS

The Russian space company Rosaviakosmos has announced that N*SYNC singer Lance Bass has signed a preliminary contract and is officially a candidate for a Russian mission to the International Space Station this October. This, even the United States National Aeronautics and Space Administration, which partners with the Russians on the space station project has expressed concerns that the pop musician may lack the proper education, endurance and fluency in Russian to undertake such a journey.

But a spokesman at Russia's Baikonur Cosmodrome training center in says that within a week Bass will begin training. The spokesman said that the singer should be able to cover enough ground to make the trip adding that three months was more than enough time to teach him the basics.

Bass will be the third space tourist to pay Russia $20 million to visit the orbiting outpost. Previous space visitors were U.S. millionaire Dennis Tito KG6FZX and South African entrepreneur Mark Shuttleworth. Tito and Shuttleworth did find time to use the ham gear on board the station. Bass interest in Amateur Radio operations from the ISS is still unknown. (ARNewsline™ from published news reports)

**

RADIO IN SPACE: LISTEN TO JUPITER ON YOUR HAM TRANSCEIVER

Want to hear what’s happening on the planet Jupiter? Just listen on the 15 meter band. So says Popular Communications Magazine in an article aptly titled Listening To Jupiter On Your Shortwave Receiver.

No, you won’t hear the latest scores from the Jupiter Red Sox playing the Mars Marlins. What can be heard is the natural sound of the orange giant. An electromagnetic wave that’s emitted at irregular intervals by Jupiter that the article describes as a sweeping lighthouse like sound.

All you need to listen in is a shortwave receiver that can tune the good old A-M mode and a decent antenna. Exactly how to listen and what to listen for is on pages 8 and 9 o the August issue of the magazine. (PopComm)

**

INTERNATIONAL - NEW ZEALAND: TECHNOLOGY CONVENTION 2003

From Down-Under, word that the New Zealand ham radio Technology Convention will now be held once every two years. Formerly called the VHF Convention, this bi-annual event now caters for a broader range of interests.

The Convention was last in Whangarei over Easter Weekend 2001. The New Zealand Association of Radio Transmitters days that it is currently is looking for a host club for Technology Convention, 2003. (NZART)

**

INTERNATIONAL - UK: HAMS GET NEW PROPAGATION STUDY BAND:

UK Radio Amateurs will shortly be able to use a number of spot frequencies around 5 MHz, to take part in a four-year propagation study. A full Class-A license holder wishing to take part will require a Notice of Variation to his existing license. At the present time, the final administrative arrangements are being put into place. A further announcement will be made regarding the start date shortly. (GB2RS)

**

INTERNATIONAL - UK: THE GREAT NEW TOOTH PHONE

Meantime, a pair of British engineers say they have invented a revolutionary tooth implant that works like a mobile phone. The 'tooth phone', designed by researchers James Auger and Jimmy Loizeau, consists of a micro sized receiver, transmitter and a transducer that are implanted into a tooth during routine dental surgery. Sound, which comes from the tooth is transferred to the inner ear by bone resonance. This means information can be received anywhere and nobody else can listen in. (Science & Technology)

**

DX

In DX, DJ6TK, is vacationing and operating 6 meters from Bornholm Island on CW and SSB mostly in his afternoon or late evening hours UTC. Listen for him signing JO75LA and possibly from JO74MX as well. (MDX)

I2IA stroke ID9 will be active from Ipari Island through September 15th. He intends to visit also other islands in the Eolie group during this time. (GB2RS)

And a group of operators from Indonesia and Italy plan to activate Masalembu Island as 8A3M from July 29th through August 4th. They expect to be on the air with two or three stations on SSB, CW and RTTY. QSL via IZ8CCW. (OPDX)

**

THAT FINAL ITEM: CAPTAIN KIRK - “THEY BE WHALES”

In what sounds like it’s right out of a Star Trek movie plot, will Captain Kirk and Mr. Spock have to go rescue some whales from oblivion after all? And what does this have to do with radio communications? Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has the answers to both of these questions:

--

In the movie Star Trek The Voyage Home, the crew of the star-ship Enterprise -- without the Enterprise -- takes on the job of saving our planet from annihilation by a space probe. The probe is angry because it is programmed to contact Humpback whales, but it cannot find any because all the whales are long gone from the planet. To save the world, Kirk and crew travel back in time to get some whales and bring them into the future.

With that in mind, picture this. The administration has now given the Navy permission to begin using a powerful new low-frequency SONAR to identify enemy submarines.

SONAR, which stands for Sound Navigation and Ranging, is usually used to observe objects in water to determine distance. According to the Navy, each of the new SONAR’s eighteen transducers produces an audio signal equivalent to the noise level you would hear if you stood next to an F-15 fighter jet while I was taking-off. It is this high power that makes it possible for the sound waves to travel several hundred miles and return an accurate target echo.

But environmentalists are worried. They note that that the new SONAR system operates in the same band of frequencies used for communication by many large

whales, including Humpbacks. They say that whales are particularly susceptible to SONAR interference because they rely on sound for communication, feeding, mating and migration. In fact, they navigate the oceans of the world using a kind of natural SONAR of their own.

Some scientists believe that whales will mistake the Navy SONAR signals for other whale pods and swim in the wrong direction. And they believe that if this happens, the worlds whale population will decrease.

Others disagree. This group of researchers believes that the two can co-exist with careful monitoring of the whales for any adverse effects which might be noticed. Adjustments could then be made to the SONAR systems operation to minimize or eliminate any problems.

The bottom line is that it's a tradeoff in communications. That of the whales versus the need of the public to be safe from enemy attack.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

The National Marine Fisheries Service says with proper monitoring and safeguards, the Navy’s new SONAR is not likely to injure whales or any other marine mammals. But to be on the safe side, we hope Captain Kirk, Mr. Spock and Scotty are standing by. (Adapted from published news reports)

Believe it. Many enjoy a ham & cheese on rye, even (also un-kosher).
Many young people have "the other white meat" for their bar-mitzvah
dinners, even in Israel. Only so-called "orthodox" Jews don't consume
pig products.

BTW, did you know that Muslims don't eat pork, either? Maybe they're
closer than they like to think?

And for the record, with the advances in refridgeration there's no
reason to avoid pork anymore.

When the internal revenue service takes money away from citizens at
gunpoint, then uses that money to make fun of citizens as part of their paid
duties, that is unethical. When citizens make fun of public servants, they
are doing it on tehir own time.

> Besides, seems to me that the judges probably get to see more examples

Pehaps this judge needs to sentence these people to get a GED or some other
adult education program. Perhaps the judge needs to pull a stint in public
education and try to make a difference.

Well I heard those back in May on my trip out to Indy, and although it is a great idea, and you wonder why they never did it in the past.
You also have to ask, do the FCC rules allow for broadcasting? Which is what they are doing.
It is a one way transmission, which makes it a broadcast,and not a communication. They are also as you mentioned, stepping on other CBr's for lack of better word.
So if there's any emergency in the area of the construction and this broadcast keeps coming up, that means no one can hear a real call for help.
So are they also monitoring Ch. 9?
Just some thoughts I have on the subject.
I've had my Amateur license for over 10 yrs now, but still throw the CB in the vehicle for any long trips.
So they still do have a purpose after all these years.
Great post.....
Lou

2560. need mic 4-pin connector wiring for SBE Key/Comm 1000

Yep you are correct. It cost $25.00 a year to be a 'member' and for
what I have no idea. It is just a sham, and these copper people have
been getting away with this crap for years.

2563. Interference from Channel 6 and 15 in SoBo_Virginia

Newsgroup: rec.radio.cb
Date: 2002-07-28 15:20:45 UTC
From: 240_ROBERT <s_ingram@directway.com>
Message-ID: <3_T09.8074$u7.631121@news.direcpc.com>
Source record: 131592

Been wondering where that high powered activity been comin' from?
It is on Channel 6 in SoBo/Halifax County, Virginia

I know this to be true. My relatives notify me by phone and e-mail whenever they see those lines on their TV and hearing the audio coming over their telephones -even with the RF filters that installed the first time that that mess happened.

I have conducted RDF Ops. on these individuals and have sent their locations in Lat/Lon to FCC officials.

Yes, I have driven by their houses late at night and in broad daylight (You Guess Which Nights/Days) using RDF equiment for RD emissions in the 27 MHz Band as well as voice recorders.

So, the individuals who get this message either directly or "by any means necessary" can keep running their amplifiers all they want. Someone may come knocking on your door, and, or serving a search warrant and confiscate your "precious equipment" (and or maybe cutting your coax at nighttime...You Guess What Nights!)

This mess WILL come to an end.

You are not only causing interference to others but to government and civilian frequencies as well as hospital equipment such as PCA pumps and EKGs and Heart Monitors.

So Keep Talking Your Mess!

2564. Re: CB endorsed by PennDOT

They are spaced so anyone can talk. Probably goes against FCC rulz but many truck stops broadcast there menu specials directions etc and cb shops also advertise. While these are against the FCC rulz the provide a valuable service.
I think the FCC realizes that CB has morphed into something else and is loath to admit it.
As for emergencies there is usually the usual construction backups and there is always what is called a "care bear" that just hangs out in the construction area with it's lights going. If these measures reduces construction zone fatalities The FCC will wisely ignore any ifraction of FCC rulz IMHO
Sincerely
Ken

They did have the "pork riots" in Isreal during the 80's.
The othodox tried and almost did pass a law banning the sale of pork in Isreal.
The merchants(many reformed and arab) started giving away free ham sandwiches pork chops etc. Of course the ulta othodox went beserk and riots ensued.
Must have been fun:)
Sincerely
Ken

Ermmm... "FCC law?" You truly exaggerate. They're called "Rules and
Regulations" and they are not "law", Aanal Aaron.

And I doubt the veracity of your closing statement; there's no reason
for Yahoo to follow eBay's lead. eBay exclusively makes money from
auctions; Yahoo does not.

Again, it's not "law". And buying or selling is not a violation of
anything. Only certain *use* may be a violation.

I like this reference:

http://www.rainbowsend.net/et/cb%20radio/information/SWRPROBM.WRI

"
G. Improper cable length. To calculate as close as possible what length should be used, formula 468 divided by the frequency (in MHz) will give 1/2 of a wave length (in feet); thus as an example, 468 divided by 27.205MHz (chan 20) gives 17.2 feet for a 1/2 wave length of coax. (Divide again by 2 for 1/4 wave length).
"

1- Coax length does NOT matter.

2- The formula fails to account for velocity factor.

3- Thanks for NOT perpetuating these rumors.

>the audio, even if you are only a few feet from the other guys receiver.

...uh, has anyone ever had a problem when the audio was "muffled or
scratchy sounding because the carrier is stronger than the audio"?
Gee, I've never heard THAT one before! LOL!

2578. F/T **SSB radio's for Trade***

Newsgroup: rec.radio.cb
Date: 2002-07-28 20:01:19 UTC
From: John <wizard@walesuk.net>
Message-ID: <ai1iie$1ig$1@venus.btinternet.com>
Source record: 131607

After many enjoyable years of SSB radio, I have decided to sell up and change over to Shortwave radio and Radio Scanners. TRADE offers are invited against the following radios, I am looking for scanners or sw-radio's.
My first and best is the new President George
http://www.transmission1.net/cbradio/review-pres_george.html
It is in immaculate condition (never used mobile) has the original box and mic and the manual, all mode AM/FM/USB/LSB/CW, also has switchable roger bleep Coverage is from 26 to 30 Mhz.....

My next best is a Ranger RCI-2960F this set is as new, boxed with manuals, all-mode 26 to 29.700
http://www.rfwiz.com/RCI-2960F.htm

Also have a Cobra 148 GTL-DX MKII, good condition, includes cobra power-mike, have the manual but not the box. All usual cobra refinements (alpha channels etc)

Superstar 360, VERY similar to the cobra

President Washington all mode except FM..26 to 28.500MHz
http://www.ammtech.com/washingt.htm

I have had enough of complaints about TVI etc and am not getting any younger, serious trade offers for scanners or sw-radio only please.
Although I may be tempted if the cash offer is good :-))
I am in the UK but shipping world-wide is not a problem
regards
The Wizard

I am noticing a dramatic increase in CB's being offered for sale that include coverage above 28 mHz. It's both sad and disturbing that a once fine service has apparently been abandoned by law abiding operators and has embarked on a new, completely lawless era.

PS: unlicensed "CB" operation above 28 mHz is illegal - in the UK and anywhere else in the world.

2581. OT- tonsilectomy and more

Newsgroup: rec.radio.cb
Date: 2002-07-28 20:47:05 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <40m8kuo1cmjf4lc9b5eepeenjhgoeenfj6@4ax.com>
Source record: 131610

A young boy of four was going into the hospital to have his tonsils removed. He told his playmate, "I'll be gone for awhile. I have to have surgery."

On the day he was admitted, his mother asked, "Doctor, could you please circumcise him while he is asleep ." The doctor agreed.

The boy woke up and was very sore "down there" for several days. After about a week he got to see his playmate again. The playmate informed him that he was also going to have to have his tonsils out soon and asked his friend to tell him about the surgery.

The little boy replied, "All I can tell you is that your tonsils ain't where you think they are."

Nice troll asswipe. Hey Aaron, by your reasoning all cars with a speedometer that reads above the maximum legally posted limit where they are operated should be confiscated. Asswipe, it's operating them above the speed limit (freq for radios) that causes the violations. But noone, and I mean Noone i know of, ever wanted to operate one of these export/hybrid radios above 28 MHZ without a license.
Again you prove what a shortsighted, arrogant, self-gratifying IDIOT you are!
PS My car will do at least 120 MPH. Come try and take my keys, but be sure to have your prepaid funeral arrangements in place!

Yes but in Kenneth's original troll, he said the DOT chose CB above
all other mediums. That must mean they think CB equipped vehicles are
the ones who are speeding, right?

But not "mature" enough to mind your own business. Obviously.

> Like so many "freebanders", you assert that such activities don't "hurt"
> anything since you are allegedly operating on frequencies that "aren't"
> used. But you don't
> KNOW that they aren't used.

When was the last time YOU heard FEMA on 11 metres? And don't say it's
irrelevant. The frequencies may be "allocated", but THEY ARE NOT USED.
That's something you cannot grasp.

Regardless, those frequencies are still
> "leased" from the Federal government by virtue of license--just like the 10
> meter band is
> allocated to licensed hams.

There IS no license for 11 metre operations. Period. There is no such
thing as a "blanket license". The FCC gave up trying to license CB
radios long ago. Why? Because they COULDN'T enforce it!

Often these frequencies are allocated directly
> to the
> US Government. Maybe, as you state, these frequencies aren't used, but they
> aren't "abandoned". For example, I KNOW that the area just below CB channel

I am so glad you added the qualifier: "almost" nil. I see reports in almost every month's issue of PopComm about some ham who's license has been revolked for doing just that. Maybe you should get out more?

I betcha more hams modify their gear than CBers - they're just smart anough not to USE it out of band. It's a whole lot easier to modify ham radios; usually just flip a switch or clip a diode. Which is why many CBers USE ham radios! The Yaesu and Kenwood radios are legendary among CBers, from the FT101 series on up.

Who are you trying to kid?

Aanother helpful post from Aaryan Aaron, the radio Nazi!! But
remember, he encouraged a guy to get his linear amp modified for 11
metres! Pay him no mind.

2593. STOP feeding Aaron the troll

Why can't u people get the hint and stop feeding the troll.
You seem intent on wasting bandspace by replying to this jackass,
the idiot does'nt like us so stop replying to him and he will go away.
His purpose is to distract us from what we came here to discuss........
Block sender , delete his posts, create message rules, do whatever it takes
to wipe his punk ass off the board and lets get on with discussing CB.
I work 11meter DX and i
vote.....

Prove that it does not ham anything, how do you know who you may
be interfering with? Oh, I know, you listened and did not hear
anyone using those frequencies so you decide it is OK for you to
use them, even though they are allocated to other services and you
are not authorized to transmit on those frequencies. Hope you
don't see my car setting unused for a few days, guess you would
decide since I was apparently not using it, it is yours for the
taking.

No, dopey, there isn't a law against selling 120 mph cars. But there IS a law against selling amps that operate within 11 meters and non-type accepted CB radios that cover 10 meters.

>Asswipe, it's operating them above the speed limit (freq
> for radios) that causes the violations.

No, selling them is against the law. See above. Would you like me to post the FCC rules again? I really ought to, it's clear than none of you really read them.

>But noone, and I mean Noone i know of, ever wanted to operate
>one of these export/hybrid radios above 28 MHZ without a

I don't want your car or your keys. But there are a lot of people in this NG that if they see you aren't using something, feel it's OK to take it. How do you feel about that?

Hello Moparholic:

Thanks a million for the help, I have gotin a bunch of e-mail replies on all kinds of different web sites, and even local frequency sources.

And one scanner nut type ah guy just north of me that has run down all kinds of intresting scanner frequencies. Most of the frequencies are in the books but ya's needs to know which ones are actually used. You could hear all kinds of diffeent scanners makin noise in the background while talkin to the guy on the phone.

I found a local Search and Resuce group on the VHF Low Band, and my 6 Meter Interceptor 10K brings them in much better than the store bought scanner antennas do. Oustanding..... I have a scanner antenna in the works called the Flat Top.

Oh by the way, your boy there #40 Mr. Sterling Marin, and his Pit Crew, and Spotters, are on the following frequencies: (MHz)
462.1
461.375
463.9375
451.325

I was at the Winston West 200 (Irinwindale Speedway) last night (had a blast) doing a little work with the boys with some radio problems.

I have never seen so many Honey's woundering around, with so few clothes.....TILT!!!!! No wounder theres are so many crashs.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Hey everyone

I checked again last night and it now is transmitting on a.m.but no
audio.

Maybe a problem in the modulation area of the radio.

Some screwdriver king has modified it (not me I only blow them
up!!!!!). Whoever had it has replaced the 2sc1306 and 1307 finals with
a lot bigger finals!

Thanks again for all the help guys

Reprinted from a Sparky post:

Aaron will never be killfiled by many of the keyclowns because he speaks the truth, and truth is what most of them fear. IOW, anyone sitting on the fence is reading both sides of any argument, and can tell the difference between keyclown BS and the truth. That's why the keyclowns must keep shoveling more and more BS to try and cover up the truth as revealed by Voobner (and others).

And why would they do that? The obvious reason is that illegal operators depend upon each other to validate their illegal activities. Just like any other form of organized crime (or religion), it is social support that justifies their behavior. Things such as "logic" and "facts" diminish the persuasive effects of such anti-social reinforcement, and must therefore be contradicted.

Another reason is that some of them make a lot of money scamming people by convincing them to buy illegal amps and "export" radios. Opposition to these people has led to many, many threats of violence against Voobner, myself, and other defenders of honorable intentions. But many of us don't scare very easily, and will continue to educate people about the reality of radio communication (life is not an RF drag race).

Killfile Voobner? Ain't gonna happen. Deal with it.

I do "band scans" with my scanner from time to time. I don't, as a rule, program dead frequencies into it though. But I guess there are those that do. But your point does underscore the fact that no matter how clever you think you are, when you create your own "private" frequency on the PSB, the more your transmit, the greater the risk that someone will eventually hear you. What happens after that is a crap shoot.

I have a Kenwood UHF handheld that is programmed though the MIC jack via a programmer. The frequency range of that radio is something like 420 - 470 Mhz. I ended up using it on the 440 ham band.

That doesn't sound much different than the "traffic" over on this side
of the pond.

> their equipment in a cupboard somewhere.

This normally happens at the end of a "skip cycle". It happened last
cycle too. There are many CBer's (myself included), who really don't
care for DX talking, or the resultant noise that occurs during high skip
cycles. Many of these people eventually tire of it and move on to other
things, or just put it away for a few years. Things have usually picked
up again in a couple of years following the end of the cycle. Don't know
if the internet and other technologies will divert more attention away
from CB as a hobby this time around though. At some point, CB will
become passe, and old fashioned. Newer technologies like video cell
phones, will make CB as primative as beating on drums. Only those of us
that have a bit of nostalgia, will remain, if only as a reminder of what
it used to be like.

Hmmm..... I live in Pa., and I have yet to hear anything like this. I
still hear the Turnpike advisories on 1640 Khz, when I drive near one of
the interchanges.

I see a fundamental legality issue with this on CB. CB is not authorized
to transmit one-way broadcasts, which these "advisories" surely are.
While many citizens have no problem breaking the rules, a governmental
agency would be under far greater pressure to behave itself.

Aaron, is this news to you?! My first export rig, the Galaxy 2100,
went to 28.3150 MHz...and that was back in 1986! Stop placing the
blame on the radios and put it where it belongs, the operator. Having
said that, I will agree that the drop in prices along with the
availability of AM/FM only rigs to non-hobbyists (read Truckers) has
certainly not helped the situation. In the mid-80s, everybody knew 28
MHz was strictly verboten. So yes, I AM agreeing with you (sorta)...it
IS kinda sad and disturbing.

> PS: unlicensed "CB" operation above 28 mHz is illegal - in the UK and
> anywhere else in the world.

P.S. Unlicensed operation above 28 MHz is not "CB." :-)

73 de Bert
WA2SI
HC2?? (My paperwork is currently being processed. Greetings from HC
land or div. 61 for all you 11-meter folks.) BTW, you can get all
yhese rigs at Billï¿½s 2Way. Tell emï¿½ Doug from Popular Wireless
Magazine sent ya. (Sorry, couldnï¿½t resist. <ggg>)

Right you are, Steve, the 468 is for cutting dipoles and includes a 5% foreshortening recognizing that the high voltages at the tips tend to include a bit of the surrounding atmosphere.

But as the whole concept is assinine, what is one more stupidity in the zoo?

I'm not sure what they are called but I was checking either the input or the out
of my antenna's with this meter connected to my cb and antenna's

Zeek, you have a bad case of 'too short antenna' which might be caused by a lot of things.

But I strongly doubt you are bopping around with twin 36-foot fiberglass whips; if you are, you won't be for long.

My guess is that you have 2-102 inch whips which if mounted without a spring will do what you describe because resonance is closer to 108". You have, however, learned one thing that will serve you well when the BS starts flowing: Efficient radiators are not especially broad.

Run the description by again. And pay no attention to George (me in the current incarnation); while he is a fellow Amateur, he is insane.

Dick NBK

Whether they are 36 inches or 36 feet, they are still a little short, perhaps by an inch or so. Make certain that the antennas are grounded well and check it again, inside the vehicle, with the doors shut. It makes a difference. I presume that the antennas are new and haven't been trimmed by someone, and there should be some adjustment to lengthen them a bit. BTW, you only have one swr at any given frequency. Swr's sounds a bit silly.

Sorry, but those amplifiers are not illegal for amateur operators to
own, use, OR sell. Idiot! Try reading something informative, like
Popular Communications, instead of the FCC Rules.

> > Someone should whack you upside the head with a 2x4;

You feel "threatened"? HAR DE HAR! Not a threat, a suggestion. If you're worried about it, stop posting total crap and unnecessary repeated Bovine Excrement in the newsgroup. I'm sure I'm not the only person who would applaud someone applying the Board of Education to your empty noggin.

> > Everybody knows the Rules, Aaryan
> > Aaron; a copy is packed with every radio.
>
> Really...FCC rules are packed with phoney "10 meter radios"? LOL. I
> doubt it. Even if they were, that doesn't mean you can prohibit me
> from posting the truth.

You wouldn't know the TRUTH if it hit you in the head. The TRUTH is that 10 metre radios are designed and built for just that - 10 metres. Nothing "phoney" about that. If you don't like what you hear on CB (or anywhere else, for that matter) you have the ability (I hope) to turn off your radio and/or do something else. Something PRODUCTIVE, for a change. That would show some maturity! You're not changing anything by acting like a 2-year-old.

The antennas inter react so you need to check the swr (singular,
not plural) with both antennas connected. Don't really know why
you want to feed two antennas, mounted on the mirror arms they are
not spaced far enough apart to give any advantage over one, in
fact, one will probably perform better than the two.

I have notice that 28.085 is becoming crowded. Usually it is just my fellow truckers jawin and I can usually find a clear channel on the f band (6 band radio). The most annoying are these idiots playing with there roger beeps above 28mhz! Whats that about? they don't even talk just beep bepbepbep beep its annoying. Also I think its at 28.200mhz someone had been dead keying his radio for about a year straight! I guess I'l have to upgrade to either an 8 band radio eventually they way our great hobby has been expanding. To all you Hams I'd like to thank you for being gracious enough to leave this slice fallow for us cber's:)
Sincerly
Ken

Hello me:

Who's me?

You mean Ivin or Gary? I talked to one of them on the phone, but can't
remember which one?

Gary is on channel, 12 AM sometimes.

Careful. Going from a six band radio to a eight band radio may be to
large of a jump. Just add one more band and then wait for it to fill
in. Once it gets crowded then, and only then add the eighth band.

You never want to over expand. Be patient. Otherwise coverage will
be full of gaps.

I never saw the advantage of running dualies, but to each his own.
Anyway, like JJ said, you have to measure the SWR with both connected.

>question 2.....is no mounted to mirror arm

A spring will probably give you the extra length you need. It will
also prevent the antenna from breaking if it hits something.

If the stock antennas and harness assembly only match well at the
higher frequencies then most likely you need to establish a better
ground.

A better ground can be had by establishing a larger, surer contact to
the automobiles sheet metal.

Wouldn't it make sense for you to ask how good a radio is BEFORE you buy it???

To answer your other question, you bought a great radio, it will outlast many others out there. I love Unidens but also own a Mirage that has treated me well.

Yep, and a 19 year old (well, he's 28 years old now) kid that lived next door would sure like to thank you truckers. He got hit by a truck (he was on a motorcycle). Seems the trucker didn't have a license (gee, just your mentality). This is a true story. Thanks to a trucker, the kid lives in a new house in a suburb with a new vehicle and a BIG bank account. I don't know what happened to the trucker or the company, however.

Thanks!

73 from Rochester, NY
Jim
(ps, he sure is a lot better now than when I saw him in the hospital. Money sure helps too!)

Although it was a troll post, if YOU took the time to make
this picture, it's pretty good. It's a prime example of why
I don't use AM on my bone stock PC-122.

If YOU didn't make this picture and you stole it from somebody,
reread the below phrases until it is perfectly clear in your mind.

Hey guys, I'm new to the group. I've been reading posts for a while and have to say that verbal warfare aside, I love it. I've found many usefull nuggets of information here.

I've been having a wonderful time learning as much as I can about radio and electronics in general. I went down and purchased the 2002 edition of the ARRL Handbook and have been "hibernating in my cave" (as my wife puts it), absorbing as much knowledge as I can. I'm addicted. I own all sorts of basic electronics books, but this one stands out. What a fantastic resource! Anyhow, I've been tinkering with CB radio for years, and am looking to take my relatively decent knowledge to the next level. After much investigation, I have concluded that an oscilloscope would aid my troubleshooting attempts to a certain degree. I would also like to one day be knowledgable enough to perfrom transceiver alignments, for which a scope (among other things) would come in handy.

What kinds of features should I look for when purchasing an oscilloscope suitable for CB repair and (someday) transceiver alignment? Tektronics recommends purchasing a scope with 5 times the bandwidth of the highest frequency you excpect to measure. At ~27MHz that's 135MHz. Those scopes are a little on the expensive side, even used (Tektroniks or otherwise). Will I find many reasons to measure a 27MHz carrier on a scope? Or will filtering the carrier out and observing modulation be more common? I'm not sure. I will spend the money if it is warranted, but I'm not too crazy about purchasing a scope full of features of little use to a CB repair technician. Surely, between the abolute cheapest and expensive scopes lies a happy medium. I am fairly certain that I don't need a digital scope, analog will suffice, I'm sure. I am also sure that I won't be purchasing a brand new one, so tips on purchasing used ones would be appreciated.

It's funny, when I see a scope for sale on Ebay, I wish to God I had the ability to walk the seller through at least REASONABLY verifying proper operation. I am amazed at the number of items with a description like "I have no idea how to use this thing. It turns on, and is sold as-is". I've often wondered if one of these was a $60 "Buy it Now" jem, waiting to be placed into the proper hands (not in any way suggesting that MY hands are the proper ones <grin>). Sometimes I think it might worth the gamble, even if I end up with a $60 paperweight, plus shipping =)

Thoughts?

Alan S.
Central California

There are plenty of 'nuggets' for sure :-0

>I've been having a wonderful time learning as much as I can about radio >and electronics in general. After >much investigation, I have concluded that an oscilloscope would aid my >troubleshooting attempts to a certain degree.

An O-scope has three fundamental purposes: To measure voltage and frequency, and to observe the waveform. Frequency measurement is usually done with a freq counter these days, and voltage can be measured very accurately with a demod probe and a multimeter. Because almost everything else can be measured more accurately with other equipment, about the only thing a scope is good for is to see the waveform.

> I would also like to one >day be knowledgable enough to perfrom transceiver alignments, for which a >scope (among other things) would come in handy.

Actually, a scope really won't help you much. Assuming you already have a variable power supply and a reasonably good digital multimeter (or VTVM), the first things you need are an accurate RF signal generator, a demod probe and a freq counter. For RF work you need a dummy load, a field strength meter and a grid-dip oscillator. I have found that a capacitor tester and an impedance bridge are almost indispensable. An audio signal generator would be next on the list, and an audio distortion analyzer would be nice, too. None of this equipment needs to be high-end, and even the old tube-type stuff will work just fine (as it has done for several decades). And THEN get an O-scope to finish off the shop. Of course a spectrum analyzer would be REALLY nice, but they are quite expensive. Because of the price, some people have built their own as an accessory for their O-scope. I can provide a link or two if you are interested.

You will probably never need to directly observe the RF. What you will see most often in a CB, and one of the things you will need a scope in order to see, is a sawtooth on a PLL loop. But you can see that with any old scope. I have three scopes (four if you count the one that doesn't work) and the one I use almost exclusively is a slow, small, analog, single-trace Heathkit. Why? Because it's quick and easy to use, small and lightweight to carry, and I don't have to worry about an expensive repair bill if I drop it or overload the input.

>It's funny, when I see a scope for sale on Ebay, I wish to God I had the

>even if I end up with a $60 paperweight, plus shipping =)

My most sincere suggestion is not to buy any scope that is going to be shipped, even if it's brand new. There are too many things that can happen during shipping, like it being dropped, kicked, bounced down a conveyer belt, or stacked next to a speaker with a really big magnet. If you want a new one, buy it at the local distributor. If you want a used scope, keep reading the want-ads and check out a few auction houses.

BTW, I'm not trying to talk you out of a scope: If you are learning the basics of electronics, or if you are designing your own circuits, a scope is absolutely essential. But for a practical repair shop it is not used nearly as often as you might think. So consider what it is that you want to do and go from there.

Might suggest if you can to pick up one of the vintage, say 1955-1960, Handbooks under Tests and Measurements. You will learn more about Envelope and Trapezoid patterns than you wanted to know from the days when scopes did not go that hi. In the process you will also learn more about Antique Modulation than sane people care to know.

Alignments are more a case of the sig generator really and not busting i.f. xfmr slugs. The hard part about scopes is keeping the crud out. Don't tell your wife but a good o-scope is kind of like owning a Shopsmith. You start collecting accessories and pretty soon you have Norm Abrams' workshop.

I'd be real interested to hear the particulars of THAT situation. I don't believe that there are ANY provisions, in FCC rules, that would allow legal jamming on any frequency band used by the citizens of this country (including ham and CB).

I'd also like to hear Ohio's justification for it.
